# COMMON MEASURES

## Length

- 1 inch or 1 in.
- 12 inches = 1 foot (ft.)
- 3 feet = 1 yard (yd.)
- 16 ⅜ feet = 1 rod (rd.)
- 5280 feet = 1 mile (mi.)
- 320 rods = 1 mile (mi.)

## Time

- 60 seconds = 1 minute (min.)
- 60 minutes = 1 hour (hr.)
- 24 hours = 1 day (da.)
- 7 days = 1 week (wk.)
- 365 days = 1 year (yr.)
- Leap years have 366 days

## Liquid Measure

- 4 gills = 1 pint (pt.)
- 2 pints = 1 quart (qt.)
- 4 quarts = 1 gallon (gal.)

## Dry Measure

- 2 pints = 1 quart (qt.)
- 8 quarts = 1 peck (pk.)
- 4 pecks = 1 bushel (bu.)

## Money

- 10 cents = 1 dime
- 10 dimes = 1 dollar

## Weight

- 16 ounces = 1 pound (lb.)
- 2000 pounds = 1 ton (T.)

## Area

- 144 sq. in. = 1 square foot (sq. ft.)
- 9 sq. ft = 1 square yard (sq. yd.)
- 272 ⅜ sq. ft. = 1 square rod (sq. rd.)
- 160 square rods = 1 acre (A.)
- 640 acres = 1 square mile (sq. mi.)

- 1 sq. ft. = a square 1 ft. long and 1 ft. wide
- 1 sq. rd. = a square a rod long and a rod wide
BOOK ONE
BOOK ONE

By

EDWARD LEE THORNDIKE

Teachers College, Columbia University

RAND McNALLY & COMPANY

CHICAGO       NEW YORK
PREFACE

These books apply the principles discovered by the psychology of learning, by experimental education, and by the observation of successful school practice, to the teaching of arithmetic. Consequently they differ from past practice in the following respects:

Nothing is included merely for mental gymnastics. Training is obtained through content that is of intrinsic value.

The preparation given is not for the verbally described problems of examination papers, but for the actual problems of life. In particular, problems whose answers must be known to frame the problems or whose conditions are fantastic are rigorously excluded.

Reasoning is treated, not as a mythical faculty which may be called on to override or veto habits, but as the cooperation, organization, and management of habits; and the logic of proof is kept distinct from the psychology of thinking.

Interest is secured, not in pictures, athletic records, and the like, but in arithmetic itself and its desirable applications. Interest is not added as a decoration or antidote, but is interwoven with the learning itself.

Nothing that is desirable for the education of children in quantitative thinking is omitted merely because it is hard; but the irrelevant linguistic difficulties, the unrealizable pretenses at deductive reasoning, and the unorganized computation which have burdened courses in arithmetic are omitted. The demand here is that pupils shall approximate 100 percent efficiency with thinking of which they are capable.

The formation and persistence of useful habits is not left to be a chance result of indiscriminate drill and review. Every habit is formed so as to give the maximum of aid to, and the
minimum of interference with, others. Other things being equal, no habit is formed that must be later broken; two or three habits are not formed where one will do as well; each is formed as nearly as possible in the way in which it is required to function; each is kept alive and healthy by being made to coöperate in the formation of other and higher habits in the arithmetical hierarchy. If a pupil carries through the projects in computing and problem-solving of these three books under competent supervision, he will have abundant practice for the arithmetical insight, knowledge, and skill that the elementary school is expected to provide.

E. L. T.

NOTES ON BOOK ONE

Part One of this book is for use as a supplement to the informal work of Grade II, and as a basic text in Grade III. Part Two, or so much of it as the course of study makes advisable, is for use in Grade IV.

Experienced teachers will, by examining and using this book, understand the reasons for the choice of the exercises and problems, for the order in which they appear, and for the methods used, with three possible exceptions. These are: (1) the early, varied, and extended use of the equation form with a missing number or quantity to be supplied, (2) the introduction of two-place and three-place multiplicands before the products of 6, 7, 8, and 9 are learned, (3) the rationalizing of procedures by verifying the fact that they are right rather than by arguments to show that they must be right.
Such uses of the equation form as the book contains will be found admirable as preventives of rote memorizing without understanding, as stimuli to mathematical thinking, and as means to an economical organization of arithmetical knowledge. The time spent on them will be saved twice over in later work.

The introduction of two-place and three-place multiplicands provides a genuine use for the multiplication facts learned, organizes the knowledge of the products of 5, 2, 3, and 4, gives a needed review, relieves the monotony of learning the tables, and enables the pupil to utilize rather than memorize the products of 6, 7, 8, and 9 as fast as these are learned.

The rationalization of procedures by the pupil's own experience in verifying the results obtained is superior to the use of formal proofs of the validity of the procedures before they are learned and used. With all save the most gifted, there is grave danger that the pupil, especially in Grades III and IV, will not know what is being proved to be true by the "analysis" or "explanation," or will forget the proof after he has mastered the procedure. The best way to secure eventual insight into the principles governing arithmetical operations is to learn to operate by imitation and the extension of past knowledge, then to make sure that the operation is right by verification from known facts, and last of all to learn why—it is right and must be right.

It will be observed that in the early steps in subtraction the pupil learns to derive his facts about $8-5$, $6-2$, etc., from his knowledge that $5+3=8$, $2+4=6$, etc., but that care is taken that he distinguishes subtraction sharply from addition, gives it its proper name, understands its common uses, and soon comes to think of subtraction combinations fluently and directly. This is important. The pupil is also taught to increase both minuend and subtrahend rather than to "borrow." This is more scientific, businesslike, and economical of thought, especially in the case of subtraction with fractions.

In using this book, those expert in the teaching of arithmetic will follow its organization of arithmetical learning, adding other
exercises of the same sorts to supplement it and using the daily life of the pupils as a source of problems, but not omitting sections or introducing new principles. For they will see in it a deliberate arrangement of arithmetical learning to fit the abilities and needs of the pupils and to organize a hierarchy of habits and powers for continuous growth.

The inexperienced teacher may well follow the order of the book even if the purpose of some one exercise here and there is not clear to him. Every section has a definite part to play in teaching something new, reviewing something previously taught, relating elements of knowledge previously taught separately, or preparing for some advance to be made fully in later sections. The organization of topics is more subtle than in ordinary texts because it parallels childish learning rather than adult knowledge, because the interests and abilities of the pupils are allowed weight as well as the teacher's convenience, and because arithmetical learning is treated as an organic whole which lives and works rather than as a collection of isolated abilities to add, subtract, multiply, and divide with such and such sorts of numbers.

It should be observed that the games, activities, and topics upon which the exercises and problems are based permit framing many additional exercises and problems of the same types as those in the text. The pupil should be encouraged to frame such. When the teacher frames such, or states a problem from the daily life of the class, he should either reproduce the actual situation or event, or use language so clear and simple that the pupils understand just what the situation or event is. It is fruitless to train children to understand intricate verbal descriptions in cases where the real situation, as life offers it, explains itself.

*The table of contents shows, in one column, the topics and activities in connection with which the learning of arithmetic is secured. In the second column are stated the main elements of the arithmetical content itself. What these are in detail and what applications of them are made to daily life can be discovered by inspection of the text. A still more summary order of topics is shown by the titles of the six main divisions. It should be understood, however, that the book provides for a continuous growth of arithmetical ability as an integrated whole, and that consequently each main division deals with much more than the one topic.*

V. Division with One-Place Divisors

| 106, 107, 108 | Dividing large numbers. Sharing the cost of a purchase.                           | Three-place numbers as dividends, all divisions being without remainder. Meaning of quotient. | 84   |
| 109 to 114    | Buying stationery. A picnic. A “Remainder Race.”                                  | Division with remainders.                                                             | 86   |
| 115, 116      | Dividing with numbers that mean dollars and cents.                                 | Practice in dividing.                                                                | 91   |
| 117 to 123    | Review. At the church fair. Telling time.                                          | Review and applications.                                                             | 92   |
| 129, 130, 131 | The calendar. A time table.                                                        | Roman numerals to XXX.                                                               | 102  |
                                                   |                                                                                      | Review and applications.                                                             |      |

VI. Organization and Application of Knowledge of the Four Operations

| 132, 133, 134 | Drawing to scale; a passenger car. North, south, east, and west. A map of Fairyland. | Multiplication and division. Mean of “What part of x is y?” Drawing to a scale.       | 105  |
| 135 to 140    | Drawing maps. Distances in the city. Travel in the city.                            | Meaning of four-place numbers. Multiplying by 10 and by 100. Drawing to a scale.       | 108  |
| 141 to 145    | How Alice earned money. How Mary earned money. Ounces, pounds, and tons. Problems like those your father has to solve. | Simple terms used in business. Weights. Meaning of “\(\frac{1}{2}\) of.” Review of \(+, -, x, \) and \(+\) | 112  |
| 146, 147      | The thermometer. Quarts, pecks, and bushels.                                        | Dry measure.                                                                        | 116  |
| 148 to 156    | Helping in a store. Reviews.                                                        | Review of all the work of Part I.                                                    | 118  |

IV. ELEMENTS OF ADDITION AND SUBTRACTION OF FRACTIONS AND MIXED NUMBERS. GENERAL REVIEW OF INTEGERS

<p>| 100 to 103 | Measuring parts. | Meaning of fractions and mixed numbers reviewed. Experience with tenths and sixteenths. | 206 |
| 104 to 110 | Adding numbers smaller than 1. Farm accounts. | Adding like fractions: Simpler cases. Expressing sums of halves and of fourths in lowest terms. | 209 |
| 111, 112 | Practice and tests. | Mastery of adding halves, or fourths. Adding thirds, fifths, or eighths without reductions. | 213 |
| 113, 114 | Objective subtraction. | Experience with subtractions from 1. Mastery of subtraction with ( \frac{1}{2} ) in minuend, in subtrahend, or in both. | 215 |
| 115 to 119 | Computation and solving problems. | Review of long division and of fractions. | 217 |</p>

ARITHMETIC
BOOK ONE, PART ONE

1. Counting

1. Count "one, two, three," and so on as far as you can.
2. Write the words "one, two, three," and so on as far as you can.
3. Write 1, 2, 3, 4, and so on as far as you can.

2. Making Six-Inch and Ten-Inch Rules

4. Which line is one inch long?
5. Which line is two inches long?
6. Which line is four inches long?

The children in the first grade need some short rules. Can you make some?

7. Make a rule two inches long.
8. Write "Two inches" on the rule.
9. Make a rule four inches long.
10. What will you write on the four-inch rule?
11. Make a rule six inches long.
12. Put lines and numbers on the six-inch rule to show 1 inch, 2 inches, 3 inches, 4 inches, and 5 inches.
13. Write "This rule is 6 inches long" on the rule.
14. Make a rule ten inches long to keep for yourself.
3. Measuring

1. Measure your 6-inch rule with the real rule. Is it too long, or too short, or just 6 inches? Are the lines in the right places?

2. Measure your 10-inch rule. Is it too long, or too short, or just 10 inches? Are the lines in the right places?

3. Measure your 4-inch rule and your 8-inch rule. Are they just right for the first-grade children to measure with?

4. What can you do to make a rule right if it is too long?

5. What must you do if a rule is too short?

4. Adding Inches to Inches

Take your 10-inch rule.

1. Draw a line two inches long. Mark it 2 inches.

2. Draw a line four inches long. Mark it 4 inches.

3. Draw a line six inches long. Mark it 6 inches.

4. Draw a line eight inches long. Mark it 8 inches.

5. Draw a line ten inches long. Mark it 10 inches.

6. Read the rest of this page. Say the right numbers where the dots are:

a. Two inches and two inches make....inches. 2 and 2 are....

b. Four inches and two inches make....inches. 4 and 2 are....

c. Six inches and two inches make....inches. 6 and 2 are....

d. Eight inches and two inches make....inches. 8 and 2 are....
5. Adding Cents to Cents

1. Take ten cents of play money.* Put them on your desk in rows like this. \[ \text{OO} \] Count them to see if you have just ten. \[ \text{OO} \]
\[ \text{OO} \]
\[ \text{OO} \]
\[ \text{OO} \]

2. Put four cents in a pile and put your hand over the pile. Put two cents more in the pile under your hand. How many cents are in the pile under your hand now? Look at them to see that your answer was right.

3. Put six cents in a pile under your hand. Put two cents more under your hand. How many cents are under your hand? Is your answer right?

4. Put three cents in a pile under your hand. Put two cents more under your hand. How many cents are under your hand?

5. Put five cents in a pile under your hand. Add two cents to the pile. How many cents are under your hand?

6. Read the rest of this page. Say the right numbers where the dots are:

   a. Three cents and two cents are...cents. 3 and 2 are...

   b. 5 and 2 are....

   c. 7 and 2 are....

   d. 1 and 2 are....

   e. 8 and 2 are....

   f. Four cents and four cents are...cents. 4 and 4 are....

* Play-cents may be cut the proper size from cardboard and marked 1¢ or ONE CENT; or counters may be used.
6. Playing Store

<table>
<thead>
<tr>
<th>Candy</th>
<th>Yeast Cakes</th>
<th>Oranges</th>
<th>Stale Bread</th>
<th>Fresh Bread</th>
</tr>
</thead>
<tbody>
<tr>
<td>1 cent</td>
<td>2 cents</td>
<td>3 cents</td>
<td>4 cents</td>
<td>5 cents</td>
</tr>
</tbody>
</table>

Play that you are buying things at this store.

A stick of candy costs 1 cent.
A yeast cake costs 2 cents.
An orange costs 3 cents.
A loaf of stale bread costs 4 cents.
A loaf of fresh bread costs 5 cents.

1. How many cents do you give for a yeast cake and an orange?
2. How many cents do you give for a loaf of fresh bread and an orange?
3. How many cents do you give for a loaf of stale bread and an orange?
4. How many cents do you pay for a yeast cake, a stick of candy, and an orange?
5. How many cents do you pay for a loaf of stale bread, a yeast cake, and an orange? Count with play money and make sure that your answer is right.
6. How many cents do you pay for two oranges?
7. Which costs more, a loaf of fresh bread or a loaf of stale bread?
8. How much do you pay for a loaf of fresh bread and a yeast cake?
7.

Read these lines. Say the right numbers where the dots are:

1. A loaf of fresh bread and a yeast cake cost . . . cents.
2. Two yeast cakes cost . . . cents.
3. Two yeast cakes and an orange cost . . . cents.
4. A yeast cake and a loaf of stale bread cost . . . cents.
5. A loaf of stale bread and a loaf of fresh bread cost . . . cents.
6. An orange and a loaf of stale bread cost . . . cents.
7. Tell the class two things you wish to buy. They must say as quickly as they can how much you will have to pay.

8. Addition

Read these lines. Say the right numbers where the dots are:

2 and 3 are . . . 5 and 3 are . . . 4 and 3 are . . .
1 and 3 are . . . 6 and 3 are . . . 7 and 3 are . . .
4 and 4 are . . . 5 and 4 are . . . 6 and 4 are . . .
3 and 1 are . . . 6 and 1 are . . . 2 and 1 are . . .
7 and 1 are . . . 4 and 1 are . . . 8 and 1 are . . .

9.

Add and say the sums:

```
  2  3  4  2  1  4  1  2  4  4
  3  4  2  1  6  3  5  7  4  1
_________  
  1  2  2  4  1  3  3  3  3  5
  8  6  2  5  4  3  1  6  2  1
_________  
  3  3  1  2  4  2  1  2  1  4
  5  7  2  4  6  8  3  5  1  2
_________  
```
10.
Tell the number of dots on each domino as quickly as you can.

11. Problems

1. A boy spent five cents for a loaf of bread and two cents for a yeast cake. How much did he spend for both together?
2. A pad costs five cents and a pencil costs two cents. How much do both together cost?
3. How long are a six-inch ruler and a four-inch ruler together?
4. A girl had four cents in her bank. She put in three cents more. How many cents were in the bank then?
5. How many cents are three pennies and a nickel?
12.

Play this game:

1. Two boys hide behind the teacher's desk. Then five more boys hide with them. The class must tell how many boys are behind the desk.

2. Three boys hide behind the desk. Then six more boys hide with them. How many boys are behind the desk?

3. Four boys hide behind the desk. Then five more boys hide with them. How many boys are behind the desk?

4. Two boys hide behind the desk. Then six more boys hide with them. How many boys are behind the desk?

Play this game using 7 and 2, 1 and 6, 3 and 7, and other numbers.

13.

1. Say the right numbers where the dots are:

   2 and 5 is the same as 5 and...

   2 and 6 is the same as 6 and...

   3 and 7 is the same as 7 and...

   2 and 5 are...

   1 and 8 are...

   2 and 7 are...

   1 and 9 are...

   2 and 6 are...

   3 and 5 are...

   2 and 8 are...

   5 and 5 are...

   3 and 6 are...

   2 and 6 are...

   4 and 6 are...

   1 and 7 are...

   4 and 5 are...

   3 and 7 are...

   5 and 5 are...

2. Count by twos as far as you can, beginning 2, 4, 6.

3. Count by twos as far as you can, beginning 1, 3, 5.

4. Count by twos as far as you can, beginning 3, 5, 7.
### 14. Practice in Adding

State the sums. Ask the teacher to see how many you can say correctly in a minute.

</tr>
</tbody>
</table>
16. Playing Store

<table>
<thead>
<tr>
<th>Sugar</th>
<th>Soap</th>
<th>Milk</th>
<th>Salt</th>
</tr>
</thead>
<tbody>
<tr>
<td>6 cents</td>
<td>7 cents</td>
<td>8 cents</td>
<td>9 cents</td>
</tr>
<tr>
<td>a pound</td>
<td>a cake</td>
<td>a quart</td>
<td>a bag</td>
</tr>
</tbody>
</table>

John keeps the store and sells things and makes change. You buy things with play money. If John makes a mistake, the one who finds it out keeps the store.

1. You buy a yeast cake and give John a nickel. You get... cents change.
2. You buy an orange and give John a nickel. You get... cents change.
3. You buy a loaf of stale bread and give John a nickel. You receive... cents change.

17.

1. Why do we call a nickel a five-cent piece?
2. Why do we call a dime a ten-cent piece?
3. You buy a cake of soap and give John a dime. You get... cents change.
4. You buy a pound of sugar and give John a dime. You get... cents change.
5. You buy a loaf of fresh bread and give John a dime. You receive... cents change.
6. You buy a bag of salt and give John a dime. You receive... cents change.
18. **Making Change**

Tell what change you should receive when —

1. You buy a quart bottle of milk and give the storeman a dime.
2. You buy a yeast cake and give a dime.
3. You buy a yeast cake and give a nickel.
4. You buy an orange and give a nickel.
5. You buy an orange and give a dime.
6. You buy a stick of candy and give a nickel.

19.

Buy things at the store and pay with five-cent pieces and pennies.

1. You buy a pound of sugar. You pay a five-cent piece and...penny.
2. You buy a quart of milk. You pay a five-cent piece and...pennies.
3. You buy a cake of soap. You pay a five-cent piece and...pennies.

Buy things at the store and give the storeman only part. John must tell you how much more to give. You buy a quart of milk and give five cents. John says, "Give me...cents more to make 8 cents."

What must John say —

4. When you buy a quart of milk and give 3 cents?
5. When you buy a pound of sugar and give 2 cents?
6. When you buy a pound of sugar and give 4 cents?
7. When you buy a cake of soap and give 5 cents?
8. When you buy a cake of soap and give 4 cents?
9. When you buy a bag of salt and give 4 cents?
10. When you buy a bag of salt and give 6 cents?
20. Subtraction

Read the lines and say the right numbers where the dots are:

1. 8 and... are 10 4 and... are 10 3 and... are 5
2. 4 and... are 7 3 and... are 9 6 and... are 8
3. 7 and... are 10 4 and... are 6 2 and... are 5
4. 2 and... are 8 6 and... are 10 5 and... are 8
5. 3 and... are 6 6 and... are 9 2 and... are 7
6. 5 and... are 7 2 and... are 6 4 and... are 9

21.

Take ten cents of play money.

1. Put ten cents under your hand. Take out three cents. How many cents are left?
2. Put eight cents under your hand. Take away three cents. How many cents are left?
3. Put nine cents under your hand. Take away four cents. How many cents are left?

"Subtract from" means "take away from."

4. How many cents are left
5. Tell how many are left if you subtract—
   a. Three cents from ten cents?
   b. Two cents from eight cents?
   c. Four cents from nine cents?
   d. Two cents from five cents?

6. Subtract the lower number from the upper number.

Think how many you must add to the lower number to make the upper number.

10 5 9 7 7 8 5 6 8 10
7 3 3 4 5 6 2 4 2 4
22. "Which Costs More?"

The prices in our store were:

- A stick of candy, 1 cent.
- A loaf of fresh bread, 5 cents.
- A yeast cake, 2 cents.
- A pound of sugar, 6 cents.
- An orange, 3 cents.
- A cake of soap, 7 cents.
- A loaf of stale bread, 4 cents.
- A quart bottle of milk, 8 cents.
- A bag of salt, 9 cents.

1. Which costs more, a loaf of fresh bread or a yeast cake? How much more?
2. Which costs more, a bag of salt or a cake of soap? How much more?
3. Which costs more, a pound of sugar or an orange? How much more?
4. Make other problems and find the answers.

23. Subtraction

Look at each pair of numbers in Row A. State what the difference between the two numbers is. Think what you add to the lower number to make the upper number. Do the same with Row B, Row C, and Row D.

Row A. 9 6 7 8 6 9 6 9 7 8
        6 4 4 5 3 4 2 5 2 3

Row B. 7 8 9 4 6 7 9 4 7 8
        1 4 7 1 3 6 8 3 4 5

Row C. 9 5 4 3 5 6 7 8 9 8
        4 1 2 1 4 5 3 1 6 7

Row D. 3 8 9 2 9 8 9 9 6 7
        2 4 4 1 2 4 1 3 3 5
24. Buying

A stick of candy costs 1 cent. An orange costs 3 cents.
A yeast cake costs 2 cents. A pound of sugar costs 6 cents.

1. What do you pay in all if you buy a pound of sugar, a yeast cake, and a stick of candy?
2. What do you pay in all if you buy an orange, a yeast cake, and a stick of candy?
3. What do you pay in all if you buy a pound of sugar, a stick of candy, and an orange?

25. Practice in Adding

1. Find the sum of these three numbers: 3
   Think what 4 and 2 are. 2
   Then think what 6 and 3 are. 4

2. Find the sum of these three numbers: 2
   Think what 5 and 2 are. 2
   Then think what 7 and 2 are. 5

3. State the sums:

Row A

<table>
<thead>
<tr>
<th>3</th>
<th>2</th>
<th>3</th>
<th>2</th>
<th>3</th>
<th>2</th>
<th>1</th>
<th>2</th>
<th>2</th>

</tbody>
</table>
26. One Half and One Quarter

1. Draw a pie cut in quarters like this:
2. Draw a half of a pie. Mark it “½ of a pie.”
3. Draw a quarter of a pie. Mark it “¼ of a pie.”
4. Draw an inch. How will you mark it?
5. Draw a half inch. How will you mark it?
6. Draw a quarter of an inch. How will you mark it?
7. Hold your hands one foot apart.
8. Hold your hands ½ foot apart.
9. Hold your hands ¼ foot apart.

27.

12 inches make 1 foot.

1. Make a rule 12 inches long. Put lines and numbers on it to show 1 inch, 2 inches, 3 inches, 4 inches, etc.
2. Find the middle of the 12-inch rule. How many inches are there in one half of twelve inches?
3. Make a rule ¼ of a foot long. How many inches are there in one fourth of twelve inches?
4. Draw a line 8 inches long.
5. Draw a line half as long as 8 inches. How many inches long is the line?
6. Draw a line one fourth as long as 8 inches. How many inches long is it?

Tell how many inches there are in:

7. One half of 8 inches.
8. One half of 12 inches.
9. ¼ of 6 inches.
10. ½ of 10 inches.
11. ½ of 4 inches.
12. ¼ of 12 inches.
13. ¼ of 8 inches.
14. ¼ of 4 inches.
1. Take the pint measure and the quart measure. Which is larger?
2. Will a pint of water fill about one glass or about two glasses?
3. Will a quart of water fill about two glasses or about four glasses or about eight glasses?
4. Will a quart of water fill one pint measure or two pint measures?
5. Will two quarts of water fill four pint measures or five pint measures?
6. Find out how many pint measures three quarts of water or sand will fill.
7. Find out how many pint measures four quarts of water or sand will fill.
8. Find out how many glassfuls three pints will make.
9. Find out how many glassfuls five pints will make.

29.

1. Which of these do you think means quart or quarts? Which means pint or pints?
   \[
   \text{qt.} \quad \text{pt.} \quad \text{yd.} \quad \text{ft.} \quad \text{in.}
   \]
2. Which means yard or yards? Which means foot or feet? Which means inch or inches?
3. Read these lines. Say the right numbers where the dots are. Say "are equal to" for =.
   \[
   2 \text{ qt.} = \ldots \text{pints.} \quad 3 \text{ pt.} = \ldots \text{glassfuls.}
   \]
   \[
   5 \text{ qt.} = \ldots \text{pt.} \quad 2 \text{ pt.} = \ldots \text{glassfuls.}
   \]
   \[
   3 \text{ qt.} = \ldots \text{pt.} \quad 4 \text{ pt.} = \ldots \text{glassfuls.}
   \]
   \[
   4 \text{ qt.} = \ldots \text{pt.} \quad 5 \text{ pt.} = \ldots \text{glassfuls.}
   \]
Read these lines. Say the right numbers where the dots are:

1. 6 pints = . . . quarts.  4 glassfuls = . . . pints.
   4 pt. = . . . qt.          10 glassfuls = . . . pt.
   10 pt. = . . . qt.        8 glassfuls = . . . pt.
   8 pt. = . . . qt.        6 glassfuls = . . . pt.

2. For 2 cents you get . . . yeast cake.  10 equals . . . 2s
   For 6 cents you get . . . yeast cakes.  4 equals . . . 2s
   For 8 cents you get . . . yeast cakes.  8 equals . . . 2s
   For 4 cents you get . . . yeast cakes.  6 equals . . . 2s

31. Feet and Yards

1. Take the foot rule and the yardstick. How many feet does 1 yard equal?
2. Draw a line on the blackboard 2 yards long. How many feet long is it?
3. Read these lines. Say the right numbers where the dots are. Say “equal” or “equals” for =.

   A.  
   A line 2 yd. long is . . . ft. long. 1 yd. = . . . ft.
   A line 3 yd. long is . . . ft. long. 2 yd. = . . . ft.
   3 yd. = . . . ft.
   A line 9 ft. long is . . . yd. long. 3 ft. = . . . yd.
   A line 3 ft. long is . . . yd. long. 4 ft. = . . . yd.
   A line 6 ft. long is . . . yd. long. 9 ft. = . . . yd.

   B.  
   1 yd. = . . . ft.
   2 yd. = . . . ft.
   3 yd. = . . . ft.
   3 ft. = . . . yd.
   4 ft. = . . . yd.
   9 ft. = . . . yd.

   C.  
   Half of 4 is . . .   Half of 6 is . . .   ½ of 8 is . . .
   ½ of 10 is . . .   ¼ of 8 is . . .   ½ of 4 = . . .
32. The Foot Rule

1. Take your foot rule. How many inches are there in one foot?

2. Draw a line 10 inches long. Add two inches to it. How many inches long is it now?

3. Draw a line 9 inches long. How many inches must you add to it to make it 12 inches long?

4. Draw pictures to show that 12 = six 2s, or four 3s, or three 4s.

5. State the missing numbers:

   A.        B.        C.
   Four 2s = . . .  Two 3s = . . .  10 and 1 = . . .
   Five 2s = . . . Three 3s = . . . 10 and 2 = . . .
   Six 2s = . . . Four 3s = . . .  4 and 4 = . . .

33. Planning for a Party

Three girls had a party. There were nine little sandwiches, six cakes, and twelve pieces of candy. Mary’s mother divided the sandwiches and cakes and candy equally among the three girls.

1. How many sandwiches did each child have?

2. How many cakes did each child have?

3. How many pieces of candy did each child have?

   John and Will are having a party for four boys.

4. How many cakes do they need to give each boy two?

5. How many sandwiches do they need to give each boy three?

6. How many pints of lemonade do they need to give each boy a pint?
Planning for a Party

Mary is going to have a party for Alice, Nell, and herself.

7. How many sandwiches does she need if each of the three girls is to have two sandwiches?
8. How many cakes does she need if each of the three girls is to have three cakes?
9. How many pieces of candy does she need if each girl is to have four?
10. Five children are coming to a party. How many pieces of candy do you need to give each child two?
11. If six children come, how many cakes will you need to give each child two?
12. If only three children come, how many cakes will you need to give each child two?

34. Problems

1. Tom had six cents in his bank and put in three cents more. How many cents were in the bank then?
2. Will has four large marbles and four small ones. How many marbles has he in all?
3. Mary found seven white eggs and two brown ones. How many did she find in all?
4. Nell looked in 4 nests. She found 2 eggs in each nest. How many did she find in all?
5. Eight eggs are how many more than half a dozen?
6. Nell has found two eggs. How many more must she find to have half a dozen?
7. Dick has half a dozen pencils. George has three. How many pencils have Dick and George together?
8. Alice has 2 boy dolls and 7 girl dolls. How many dolls has she in all?

9. How many cents are there in two nickels?

10. Tom is 12 years old. John is 3 years old. Will is 4 years old. Fred is 6 years old. Which boy is half as old as Tom? Which boy is one fourth as old as Tom?

11. George is 7 years old. How old will he be in two years?

12. His baby sister is 4 years old. How old will she be in two years?

13. Dick is 6 years old. John is 10 years old. How much older is John than Dick?

14. Make up problems about adding 3 to 4.

15. Make up problems about subtracting 3 from 10.

16. Make up problems about three 3s.

17. Make up problems about four 2s.

\[ 5 + 3 = 8. \text{ The} + \text{ means "Add the 3 to the 5."} \]

\[ 5 - 3 = 2. \text{ The} - \text{ means "Subtract the 3 from the 5."} \]

18. Add:

\[
\begin{align*}
5 + 4 &= \\
3 + 2 &= \\
4 + 3 &= \\
2 + 7 &= \\
6 + 3 &= \\
4 + 4 &= \\
5 + 5 &= \\
3 + 5 &= \\
\end{align*}
\]

19. Subtract:

\[
\begin{align*}
4 - 3 &= \\
6 - 3 &= \\
9 - 4 &= \\
7 - 3 &= \\
5 - 2 &= \\
8 - 5 &= \\
7 - 2 &= \\
6 - 4 &= \\
\end{align*}
\]

20. Add if the sign is +.

Subtract if the sign is −.

\[
\begin{align*}
5 + 5 &= \\
9 - 2 &= \\
8 - 4 &= \\
3 + 4 &= \\
7 - 3 &= \\
8 - 2 &= \\
6 + 4 &= \\
5 - 3 &= \\
\end{align*}
\]
35. Counting and Measuring

1. Count from eleven to fifty.
2. Take a wide sheet of paper. Write the numbers from 11 through 20 on the first line.
3. On the second line write the numbers from 21 through 30. Write the 21 just under the 11, write the 22 just under the 12, write the 23 just under the 13.
4. On the third line write the numbers from 31 through 40. Write the 31 just under the 11 and 21. Write 32 just under the 12 and 22.
5. On the fourth line write the numbers from 41 to 50.
6. Find how many inches there are in one yard.
7. How many cents are there in a quarter of a dollar?
8. How many cents are there in half a dollar?
9. Name something that costs about 40¢ a pound.
10. Name something that costs about 30¢ a pound.
11. Name something that costs about 20¢ a pound.
12. Name something that is about ten feet long.
13. Name something that is about twenty feet long.
14. Name something that is about fifty feet long.

Take a tape measure or a long stick marked off in inches.

15. Measure the shortest boy in the class. How many inches tall is he?
16. Measure the tallest boy in the class.
17. Measure the shortest girl in the class.
18. Draw a line 5 inches long on the blackboard.
19. Draw a line 15 inches long on the blackboard.
20. Draw a line 25 inches long on the blackboard.
21. Draw a line 35 inches long on the blackboard.
36. Adding Large Numbers

(With pencil.)

1. The teacher puts 34 cents of play money in a box and adds 12 cents more to it. Find out how many cents there are in the box without counting.

   Here is a quick way to find out:
   Write 34. Write 12 under the 34.

   Look at the 2 and 4, think "2 and 4 are six," write 6 under the 2.
   Look at the 1 and 3, think "1 and 3 are 4," write 4 under the 1.

   There are 46 cents in the box.

2. The teacher puts 26 cents in a box and then puts 23 cents more in the box. How many cents are there in the box? Write the numbers and write the answer.

3. The teacher puts 14 cents in the box and then 23 cents. How many cents are there in the box?

4. Draw a line 25 inches long. Add 23 inches to it. Find out how long the line is without measuring.

5. A boy had 27 cents in his bank and put in 12 cents more. How many cents were in the bank then?

6. The teacher puts 23 cents in a box and then puts 12 more in and then puts 14 more in. Find out how many cents there are in the box without counting.

   Here is the quick way to find out:
   Write 23. Write 12 and 14 under the 23.

   Think "4 and 2 are 6, 6 and 3 are 9." Write 9 under the 4.
   Think "1 and 1 are 2, 2 and 2 are 4." Write 4 under the 1.

   There are 49 cents in the box.

7. The teacher puts 15 cents and 12 cents and 21 cents in a box. How many cents are in the box?
37. Numbers to 100

1. Count from 51 to 100.
2. Take a wide sheet of paper. On the first line write the numbers from 51 through 60.
3. On line 2 write the numbers from 61 through 70.
4. On line 3 write the numbers from 71 through 80.
5. On line 4 write the numbers from 81 through 90.
6. On line 5 write the numbers from 91 through 100.
7. Draw a line 55 inches long on the blackboard.
8. Draw a line 65 in. long.
9. Draw one 75 in. long.
10. Draw a line 85 in. long.
11. Draw one 95 in. long.
12. Five feet are equal to 60 inches. Name somebody who is as tall as 60 inches.
13. Hold your hand 30 inches above the floor. Now hold it 10 inches higher, or 40 inches from the floor. Now hold it 50 inches from the floor. Now hold it 60 inches from the floor. Can you hold it 100 inches from the floor?

38.

1. The third-grade children and the second-grade children had a party. There are thirty-six children in the third grade and forty-two children in the second grade. How many are there in both grades together?
2. Tom brought 21 apples. Fred brought 23 apples. Dick brought 42 apples. How many apples were there in all?
3. Mary brought 24 cakes. Nell brought 31 cakes. Alice brought 32 cakes. How many cakes were there in all?
EVENYTHING FOR THE DOLL. SPECIAL PRICES.

How much will it cost to buy:
1. A carriage, table, and chair?  2. Slippers and a hat?
3. A table, chair, and dishes?  4. A hat and comb set?
5. A table, chair, hat, and set of dishes?

Add and write the sums. Do as many as you can in 10 minutes.

1. A boy has 98 cents in his bank. He takes out 23 cents. Find out how much he has left.

*Here is a quick way to find out:* 98
Write 98. Write 23 under the 98. 23
Subtract 3 from 8. Write the 5 under the 3.
Subtract 2 from 9. Write the 7 under the 2.
He has 75 cents left in the bank.

2. A girl has a roll of ribbon 99 inches long. She cuts off a piece 27 inches long. Find out how many inches are left on the roll.

Write 99 Subtract.

27

3. John weighs 86 pounds. Tom weighs 73 pounds. How many pounds more does John weigh than Tom?

4. Tom wishes to buy a baseball suit that costs 98 cents. He has 76 cents. How much more money must he get?

5. If you buy some tools for 53 cents and give the man in the store 75 cents, how much change should you get?

6. The boys brought 86 apples for the party. They threw away 13 because they were not fit to eat. How many of the apples were fit to eat?

7. The girls brought 87 cakes for the party. 15 cakes were left. All the rest were eaten. How many cakes were eaten?

8. Mary had 75 cents. She spent 22 cents. How much has she left?
Subtract the smaller number from the larger number and write the answers. How many can you do in ten minutes and have them all right?*

*To the Teacher.—In this and many of the following written exercises in addition and subtraction, it is not necessary to have the pupils copy the examples. Have them lay the top edge of a sheet of paper under the row of examples to be done and write the answers only. Then let them fold the sheet under 1 inch and lay this new edge under the next row to be done. This will reduce the time required by over 50 percent, will increase accuracy, and will make the correction of the work very much easier. Teach the children to write all answers directly under the examples in question and to make straight folds.
43. **Zero**

0 means “not any” or zero. 0 cents means no cents at all. 0 boys means not any boys. The name for 0 is ZERO.

![6 dots](image1)  ![0 dots](image2)  ![3 dots](image3)

Look at these examples. Cover the answers with a piece of paper. Think what answers you would write. Then look to see if you are right.

**0 and 0 = 0**

44. **Bean Bag**

The children played bean bag. They marked a little circle, a triangle, a square, and a big circle on the floor like this. Each child threw four bean bags. A bag in the big circle outside the square counts 0; a bag in the square outside the triangle counts 1; a bag in the triangle outside the little circle counts 5; a bag in the little circle counts 10. They added the
four numbers to get the score. The pictures show where each child threw the bean bags. A little black square stands for a bean bag.

1. Tell what each child's score was.

When you play sides, you write each child's score and add the scores for all the children who are on the same side. The sum is the total score for the side.

Write each child's name and write his score after his name. Use these numbers to find:

2. The total score for Mary, Nell, and Alice.
3. The total score for John, Will, Mary, and Nell.
4. The total score for Tom, George, Alice, and Grace.
5. The total score for all four boys.
6. The total score for all four girls.
7. The total score for John, Tom, Alice, and Mary.
45. Bean Bag Scores

Each number is the single score of one child. Each column of three numbers stands for a team of three players. Find the total score for each team. Write the answers.

1¢ a picture postcard
2¢ a paper doll
3¢ a dozen jackstones
4¢ a top
5¢ a ball
6¢ a pad
7¢ a toy pistol
8¢ dominoes
9¢ a book

How much do you pay for —

1. A ball and a pad?
2. A ball and a toy pistol?
3. Dominoes and a dozen jackstones?
4. A top and a pad?
5. A top and a toy pistol?
6. A book and a paper doll?
7. A book and a dozen jackstones?
8. A book and a top?
9. A book and a ball?
10. Dominoes and a top?
1. Play that you have 8 cents to spend for two things at the 1 2 3 4 5 6 7 8 9 Cent Store. You can buy a pad and........, or you can buy a ball and a........, or you can buy two tops.

What can you buy if —
2. You have 9 cents to spend for two things?
3. You have 10 cents to spend for two things?
4. You have 11 cents to spend for two things?
5. You have 12 cents to spend for two things?
6. You have 13 cents to spend for two things?
7. You have 14 cents to spend for two things?
8. You have 15 cents to spend for two things?
9. You buy a toy pistol and a paper doll and pay with a dime and a nickel. How many cents change should you get?

Play that you have 15 cents. How much will you have left if you buy:
11. Two dozen jackstones? 15. A set of dominoes?
13. A top and a paper doll? 17. Seven picture postcards?

How much do you pay for —
18. A top, a ball, and a paper doll?
19. A top, a ball, and a pad?
20. A top, a ball, and a dozen jackstones?
21. A ball, a paper doll, and a toy pistol?
22. A ball, a paper doll, and a pad?
23. A toy pistol, a postcard, and a top?
State the sums:

- **a.** 6 7 2
- **b.** 4 5 2
- **c.** 6 7 7
- **d.** 3 8 5

- **e.** 6 8 3
- **f.** 1 8 5
- **g.** 9 7 2
- **h.** 6 3 5

- **i.** 8 5 8
- **j.** 9 3 9
- **k.** 3 3 9
- **l.** 4 9 7

- **m.** 4 6 6
- **n.** 7 5 4
- **o.** 4 8 9
- **p.** 9 7 3

- **q.** 7 6 9
- **r.** 4 8 9
- **s.** 6 4 6
- **t.** 4 7 3

50.

1. How much do you pay for two sets of dominoes?
2. How much do you pay for a book and dominoes?
3. How much do you pay for a book and a pistol?
4. How much do you pay for two books?
5. Which two things can you buy with 17 cents?
6. Which two with 15 cents? With 16 cents?

51.

A team of 3 boys and a team of 3 girls have an adding match. Each child gives the sums for one row on page 33. His score is the number of sums he gets right in 1 minute. To get the total score for the team you add the scores of the three children.

Practice with all the rows on page 33, so that you can make a good score.

</table>

1. Tom’s team scored 18. Mary’s team scored 9. Which won? By how much?
52. Saving for a Bicycle

The Peerless bicycle costs 18 dollars.
The Napoleon bicycle costs 16 dollars.
The Kenwood bicycle costs 12 dollars.

1. Tom has 9 dollars saved for a bicycle. How much more must he save to be able to buy a Peerless? To buy a Napoleon? To buy a Kenwood?

2. Fred has 8 dollars saved. How much more must he save to have enough to buy a Peerless? A Napoleon? A Kenwood?

3. John has 7 dollars saved. How much more must he save to have enough to buy a Meccano No. 5 that costs 14 dollars? To buy an extra large size tool chest that costs 11 dollars?

4. Will has 9 dollars saved. How much more must he save to buy a Meccano No. 5? To buy the extra large size tool chest?

5. George earned 4 dollars in June, 5 dollars in July, and 8 dollars in August. How much did he earn in all?

6. If George spends 9 dollars of what he earned for a second-hand bicycle, how much will he have left?

7. A boy has six dollars in one bank, two in another, and seven in another. How much has he in all?

8. Say the right numbers where the dots are:

<table>
<thead>
<tr>
<th>A.</th>
<th>B.</th>
<th>C.</th>
</tr>
</thead>
<tbody>
<tr>
<td>9 and... = 13</td>
<td>7 and... = 14</td>
<td>9 and... = 18</td>
</tr>
<tr>
<td>5 and... = 12</td>
<td>9 and... = 14</td>
<td>8 and... = 16</td>
</tr>
<tr>
<td>7 and... = 15</td>

</tbody>
</table>
53. Practice in Adding

1. Count by 2s to 31, beginning 1, 3, 5, 7.
2. Count by 2s to 32, beginning 2, 4, 6, 8.
3. Count by 3s to 31, beginning 1, 4, 7, 10.
4. Count by 3s to 33, beginning 3, 6, 9, 12.
5. Count by 4s to 41, beginning 1, 5, 9, 13.
6. Count by 4s to 42, beginning 2, 6, 10, 14.
7. Count by 4s to 43, beginning 3, 7, 11, 15.
8. Count by 4s to 44, beginning 4, 8, 12, 16.

9. Give the sums:
   A.  
   B.  
   C.  
   D.  
   \[
   \begin{align*}
   2 + 3 &= 8 + 4 = 15 + 2 = 17 + 2 = \\
   22 + 3 &= 28 + 4 = 35 + 2 = 29 + 3 = \\
   42 + 3 &= 6 + 4 = 17 + 3 = 16 + 3 = \\
   7 + 3 &= 16 + 4 = 17 + 4 = 28 + 3 = \\
   37 + 3 &= 9 + 4 = 23 + 3 = 26 + 4 = \\
   27 + 3 &= 19 + 4 = 25 + 4 = 19 + 3 =
   \end{align*}
   \]

10. Count by 5s to 51, beginning 1, 6, 11.
11. Count by 5s to 52, beginning 2, 7, 12.
13. Count by 5s to 54, beginning 4, 9, 14.
14. Count by 5s to 55, beginning 5, 10, 15.
15. Count by 6s to 61, beginning 1, 7, 13.
16. Count by 6s to 62, beginning 2, 8, 14.
17. Count by 6s to 63, beginning 3, 9, 15.
18. Count by 6s to 64, beginning 4, 10, 16.
19. Count by 6s to 65, beginning 5, 11, 17.
20. Count by 6s to 66, beginning 6, 12, 18.
21. Count by 3s to 32, beginning 2, 5, 8, 11.
22. Count by 10s to 95, beginning 5, 15, 25.
Look at the calendar.

2. How many days are there in a week?
3. How many days are there in November?
4. What day of the month was the first Monday in November 1915, the 1st, or 2d, or 3d?
5. What day of the month was the second Monday in November 1915, the 7th, or the 8th, or the 9th?
6. What day of the month was the third Monday?
7. What day of the month was the fourth Monday?
8. What day of the month was the fifth Monday?
9. How many are 1 and 7? 8 and 7? 15 and 7? 22 and 7?
10. What day of the month was the first Thursday in November 1915?
11. What day of the month was the second Thursday in November 1915?
12. How many are 4 and 7? 11 and 7? 18 and 7?
13. How many are 3 and 7? 13 and 7? 23 and 7?
14. Make a calendar for this month of this year. The teacher will help you.
1. Count by 7s to 71, beginning 1, 8, 15.
2. Count by 7s to 72, beginning 2, 9, 16.
3. Count by 7s to 73, beginning 3, 10, 17.
4. Count by 8s to 81, beginning 1, 9, 17.
5. Count by 8s to 82, beginning 2, 10, 18.
6. Count by 8s to 83, beginning 3, 11, 19.
7. Count by 9s to 91, beginning 1, 10, 19.
9. Count by 9s to 93, beginning 3, 12, 21.

10. State the sums:
11. Cover the 13s. Think 16 + 4, 16 + 7, 16 + 3, etc., and state the sums.
12. Cover the 13s. Think 19 + 4, 19 + 7, 19 + 3, etc., and state the sums.
13. Cover the 13s. Think 24 + 4, 24 + 7 etc., and state the sums.
14. Cover the 13s. Think 17 + 4, etc., and state the sums.
15. Cover the 13s. Think 25 + 4, etc., and state the sums.

16. Add each number in the row below to 11. To
17. Count by 7s to 74, beginning 4, 11, 18.
18. Count by 8s to 88, beginning 8, 16, 24.
19. Count by 7s to 76, beginning 6, 13, 20.
56. Christmas Presents

Price... 25¢
Try to think out for yourself the way to find the right sums.* If you need help, study page 40. Page 40 will show you a quick way to find the sums and have them all right.

1. Choose three presents, one for father, one for mother, and one for baby. Write the cost of each and add to find the total cost. *Total cost* means the cost for all three together.

2. Choose three presents for yourself. Find the total cost.

3. Choose three presents for a girl. Do not spend more than 60 cents. What is the total cost of the three you chose?

4. Choose three presents for a boy. Do not spend over 40 cents. What is the total cost of those you chose?

5. Find the total cost if you buy a fish line for father, a sugar bowl for mother, and dominoes for sister.

6. Find the total cost if you buy suspenders for father, a picture frame for mother, and a box of blocks for baby.

7. How much is the total cost of the two cheapest presents for a girl?

8. How much is the total cost of the three most expensive presents for a girl?

9. What is the total cost of all four presents for a boy?

10. What is the total cost of all four presents for a girl?

11. What is the total cost of all four presents for a baby?

*To the Teacher.—Only a few of the most gifted pupils will invent "carrying" for themselves, but it is well for all the children to face this problem and feel a need for its solution before learning the solution.
58. Adding

1. Read the right numbers where the dots are:
   
   **A.**
   
   35 cents is 5 cents and ... dimes.  
   32 cents is ... cents and ... dimes.  
   28 cents is ... cents and ... dimes.  
   23 cents is ... cents and ... dimes.  
   17 cents is ... cents and ... dimes.  
   24 is 4 and ... tens.  
   36 is 6 and ... tens.
   
   **B.**
   
   18 is 8 and ... tens.  
   25 is 5 and ... tens.  
   19 is 9 and ... tens.  
   28 is ... and ... 10s  
   36 is ... and ... 10s  
   32 is ... and ... 10s  
   16 is ... and ... 10

2. Say any number you think of. Then tell how many ones and how many tens make the number.

3. How much is 26 cents?  
4. How much is 4 cents and 38 cents?

*Here is a quick way to find out:*

<table>
<thead>
<tr>
<th>Dimes</th>
<th>Cents</th>
</tr>
</thead>
<tbody>
<tr>
<td>26</td>
<td>38</td>
</tr>
</tbody>
</table>

Add the cents column first.  
Write the sum of 1 and 3 and 2 in the dimes column under the 3 and 2.

*Here is the quickest way to find out:*

<table>
<thead>
<tr>
<th>Dimes</th>
<th>Cents</th>
</tr>
</thead>
<tbody>
<tr>
<td>26</td>
<td>38</td>
</tr>
</tbody>
</table>

Write the 4 of 14 in the cents column under the 8 and 6.
Add 1 dime to 3 and 2.

5. Look at this:

<table>
<thead>
<tr>
<th>Dimes</th>
<th>Cents</th>
</tr>
</thead>
<tbody>
<tr>
<td>24</td>
<td>23</td>
</tr>
<tr>
<td>39</td>
<td></td>
</tr>
</tbody>
</table>

What is the sum of the ones?  
What will you write in the ones column? What will you add to 3 and 2 and 2?
6. How much are 16, 18, 19, and 39?

<table>
<thead>
<tr>
<th>Tens</th>
<th>Ones</th>
</tr>
</thead>
<tbody>
<tr>
<td>16</td>
<td>Copy the numbers and add.</td>
</tr>
<tr>
<td>18</td>
<td>Think where you write the 2</td>
</tr>
<tr>
<td>19</td>
<td>of the 32. Think what you</td>
</tr>
<tr>
<td>39</td>
<td>must do with the 3.</td>
</tr>
</tbody>
</table>

7. Copy and add:

<table>
<thead>
<tr>
<th></th>
<th>a.</th>
<th>b.</th>
<th>c.</th>
<th>d.</th>
<th>e.</th>
<th>f.</th>
<th>g.</th>
<th>h.</th>
<th>i.</th>
<th>j.</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>19</td>
<td>24</td>
<td>12</td>
<td>9</td>
<td>19</td>
<td>9</td>
<td>18</td>
<td>14</td>
<td>13</td>
<td></td>
</tr>
<tr>
<td></td>
<td>26</td>
<td>23</td>
<td>13</td>
<td>26</td>
<td>19</td>
<td>17</td>
<td>16</td>
<td>25</td>
<td>15</td>
<td>27</td>
</tr>
<tr>
<td></td>
<td>17</td>
<td>19</td>
<td>17</td>
<td>38</td>
<td>29</td>
<td>26</td>
<td>18</td>
<td>39</td>
<td>25</td>
<td>48</td>
</tr>
</tbody>
</table>

59. Checking Sums in Addition

When you send a mail order, a clerk adds the numbers to see if the total cost is right. Play that you are a clerk and see if the total cost is right or wrong in each of the twenty orders on this page. Be sure you get the right sum yourself. Keep a list of the orders where the total cost is wrong.

<table>
<thead>
<tr>
<th></th>
<th>1.</th>

60. Dollars and Cents

1. $4.23 means 4 dollars and 23 cents. Or we may read it “4 dollars 23 cents.” What does $16.48 mean?

2. $15.08 means 15 dollars and 8 cents. Or we may read it “15 dollars 8 cents.” What does $9.05 mean?

When we write numbers meaning dollars and cents, we put a $ first and put a decimal point to show which number means dollars and which number means cents.

3. Read the prices of these articles:

   FINEST TOY CHINA
   Price . . . . $1.98

   SPECIAL TOY STORE
   Price . . . . $2.89

   THIS WONDERFUL TRAIN
   Price . . . . $12.98

   THIS 14-INCH ENGINE
   Price . . . . $4.67

   ERECTOR OUTFIT No. 4
   Price . . . . $4.49

   OUR FINEST DOLL
   Price . . . . $4.95

4. Read these: $6.50 $7.10 $15.06 $.84
   $1.05 $20.75 $20.08 $9.45 $7.98
   $10.05 $1.25 $1.75 $8.29 $2.10

5. Write in figures:
   a. Seven dollars fifty-four cents.
   b. Seven dollars fifty cents.
   c. Twenty-eight dollars seventy-five cents.
   d. Ten dollars and nine cents.
   e. Five dollars and ten cents.
1. Find the cost of the set of toy china and the doll.

Here is the way to find it:

<table>
<thead>
<tr>
<th>Dollars</th>
<th>Dimes</th>
<th>Cents</th>
</tr>
</thead>
<tbody>
<tr>
<td>$1.98</td>
<td></td>
<td></td>
</tr>
<tr>
<td>$4.95</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Write the 3 of 13 in the cents column under the 5 and 8.
Add the 1 to the 9 and 9 of the dimes column.

Put a $ before the 6.98 to show that it means dollars and cents.
Put a decimal point between the 6 and 9, to show that 6 means dollars and 93 means cents.

2. Find the cost of the set of china, the store, and the 14-inch engine.

3. Find the cost of the $4.95 doll and the erector outfit.

4. Find the cost of the 14-inch engine and the erector outfit.

5. Find the cost of the set of china at $1.98, the store at $2.98, and the doll at $4.95.

6. Find the total cost of each of these orders.

Put $ before your answers to show that the numbers mean dollars and cents. Put a decimal point in each answer to show which numbers mean dollars and which numbers mean cents.

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>

</thead>
<tbody>
<tr>
<td>$6.25</td>
<td>$2.50</td>
<td>$4.47</td>
<td>$5.10</td>
<td>$2.68</td>
</tr>
<tr>
<td>4.69</td>
<td>1.25</td>
<td>1.08</td>
<td>2.25</td>
<td>3.79</td>
</tr>
<tr>
<td>1.98</td>
<td>5.09</td>
<td>6.89</td>
<td>1.98</td>
<td>4.50</td>
</tr>
</tbody>
</table>

| $1.98   | $.75     | $.75     | $14.25   | $1.62    |
| .70     | 2.08     | .62      | 12.50    | 2.73     |
| 1.62    | .84      | .98      | 11.50    | 1.85     |
62. Saving

1. Mary has saved $1.55. How much more must she save to have enough to buy the toy store for $2.98?

2. Nell has saved $2.82. How much more must she save to have enough to buy the doll for $4.95?

3. Tom has saved $2.79. How much more must he save to have enough to buy the 14-inch engine for $4.67?

Here is the way to find out:

Subtract

<table>
<thead>
<tr>
<th>Dollars</th>
<th>Cents</th>
</tr>
</thead>
<tbody>
<tr>
<td>$4.67</td>
<td></td>
</tr>
<tr>
<td>2.79</td>
<td></td>
</tr>
</tbody>
</table>

Nine is more than 7. So increase the 7 to 17.
Think "9 and . . . = 17," and write 8 in the cents column.

Increase the 7 of 2.79 to 8.

8 is more than 6. So increase the 6 to 16.
Think "8 and . . . = 16," and write 8 in the dimes column.
Increase the 2 of 2.79 to 3.

3 and . . . = 4. Write 1 in the dollars column.
Put $ and . where they belong.

4. Will has saved $2.87. How much more must he save to have enough to buy the Erector Outfit No. 4 for $4.49?

Subtract

<table>
<thead>
<tr>
<th>Dollars</th>
<th>Cents</th>
</tr>
</thead>
<tbody>
<tr>
<td>$4.49</td>
<td></td>
</tr>
<tr>
<td>2.87</td>
<td></td>
</tr>
</tbody>
</table>

Think "7 and . . . = 9." Write 2 in the cents column.
8 is more than 4. So increase the 4 to 14.

Think "8 and . . . = 14." Write 6 in the dimes column.
Increase the 2 of 2.87 to 3.

3 and . . . = 4. Write 1 in the dollars column.
Put $ and . where they belong.
1. Alice has saved $3.28. How much more must she save to have enough to buy the doll for $4.95?
   - $4.95  What do you do to the 5?
   - 3.28  What do you write in the cents column?
   - What do you do to the 2?
   - What do you write in the dimes column?

2. Dick has saved $2.69. How much more must he save to buy the 14-inch engine for $4.67? After you find the answer, add it to $2.69. If your answer is right, you will have $4.67 when you add your answer to $2.69.

3. John has saved $2.63. How much more does he need to have enough to buy the Erector for $4.49?

4. Tom, Will, John, and Fred are all saving so that each can buy a Meccano No. 3 for $5.61. Tom has $2.85. Will has $3.19. John has $3.76. Fred has $3.79. How much more does Tom need?

5. How much more does Will need?

6. How much more does John need?

7. How much more does Fred need?

8. Make sure that your answers are right by adding what you find Tom needs to what he has and seeing if the two together make $5.61. Add what you find Will needs to what he has. Do the same for John and for Fred.

9. Mary, Nell, Alice, and Grace are all saving so that each can buy a real sewing machine for $3.25. Mary has $1.63. Nell has $1.78. Alice has $1.98. Grace has $2.18. How much more does Mary need? Nell? Alice? Grace?
2. Count by 5s to 600, beginning 105, 110, 115.
4. Count by 2s to 200, beginning 102, 104, 106.
5. Write the numbers from 301 to 370, like this:
   301 302 303 304 305 306 307 308 309 310
   311 312 313 314 315 316 317 318 319 320
6. Read these numbers: 240 725 165 162 169 248
   241 290 800 150 233 276
7. Guess how many inches long your schoolroom is.
8. Find the difference between your guess and the right answer. You can find the right answer by measuring with the yardstick and adding, or the teacher will tell you.
9. Guess how many little squares there are in this picture.
10. The teacher will tell you the right answer. Find the difference between your guess and the right answer.
11. Some boys guessed the number of days in a year. Tom guessed 198; Will guessed 218; John guessed 347; George guessed 400. The right number is 365. Who guessed less than the right number?
12. Who guessed more than the right number?
13. Who guessed nearest?
14. Find the difference between each boy's guess and the right number.
15. How much nearer did John guess than George?
16. Who made the worst guess?
65. What Change Should I Receive?

1. You buy something for 39 cents and pay with a 50-cent piece. What change should you receive?
2. You buy something for 29¢ and pay with a 50-cent piece. What change should you receive?
3. Tell what change you should get from a 50-cent piece when the total cost of what you buy is 37 cents.
4. When it is 28 cents. 45 cents. 43 cents. 25¢. 46¢. 18¢. 22¢. 35¢. 34¢.
5. Tell what change you should get from a 50-cent piece and a 25-cent piece when the total cost of your purchase is 57 cents.
6. When it is 62 cents. 60¢. 69¢. 56¢. 68¢. 71¢. 58¢. 55¢.
7. Tell what change you should get from a dollar bill when the total cost of your purchase is 27 cents.

Think of the dollar as 100 cents.

8. When it is 43¢. When it is 64¢. 68¢. 78¢. 88¢. 59¢. 22¢. 17¢. 36¢. 25¢. 75¢. 50¢. 40¢.
9. Tom has 93 cents. How much will he have left if he buys a sled for 75 cents?
10. Will has 87 cents. How much will he have left if he buys some skates for 69 cents?

Write the sums:

<table>
<thead>
<tr>
<th>a</th>
<th>b</th>
<th>c</th>
<th>d</th>
<th>e</th>
<th>f</th>
<th>g</th>
</tr>
</thead>
<tbody>
<tr>
<td>290</td>
<td>332</td>
<td>420</td>
<td>160</td>
<td>187</td>
<td>356</td>
<td>290</td>
</tr>
<tr>
<td>134</td>
<td>280</td>
<td>79</td>
<td>57</td>
<td>150</td>
<td>89</td>
<td>34</td>
</tr>
<tr>
<td>299</td>
<td>108</td>
<td>375</td>
<td>166</td>
<td>178</td>
<td>134</td>
<td>203</td>
</tr>
<tr>
<td>142</td>
<td>57</td>
<td>66</td>
<td>508</td>
<td>245</td>
<td>203</td>
<td>124</td>
</tr>
</tbody>
</table>

Addition
Find the difference between the lower number and the upper number. Lay a strip of paper across the page. Write the answers on it. Practice with these examples until you can do a row or nearly a row in a minute, and get them all right. Test them by adding. Then the teacher may have a race between the boys and the girls.

- Test all your answers for this page by adding.

**Row A**

<table>
<thead>
<tr>
<th></th>
<th>1.</th>
<th>2.</th>
<th>3.</th>
<th>4.</th>
<th>5.</th>
<th>6.</th>

<td>315</td>
<td>94</td>
<td>656</td>
</tr>
</tbody>
</table>
67. Two 5s = 10, Three 5s = 15, etc.

1. Count by 5s to 50, beginning 5, 10, 15.
2. Add and give the sums. Then give the sums without adding.

\[
\begin{array}{cccc}
5 & 5 & 5 & 5 \\
5 & 5 & 5 & 5 \\
5 & 5 & 5 & 5 \\
5 & 5 & 5 & 5 \\
5 & 5 & 5 & 5 \\
\hline
5 & 5 & 5 & 5
\end{array}
\]

Four 5s = Seven 5s = Six 5s = Eight 5s = 1 nickel = 5 cents.

3. How many cents are there in 3 nickels or 5-cent pieces? In 5 nickels? In 2 nickels? In 6 nickels? In 4 nickels? In 7 nickels?

4. Say the right numbers where the dots are:
   One trolley ride costs 5 cents.
   Two trolley rides cost..... Six trolley rides cost.....
   Three trolley rides cost... Seven trolley rides cost...
   Four trolley rides cost.... Eight trolley rides cost...
   Five trolley rides cost..... Nine trolley rides cost.....

5. Say the right numbers where the dots are. Say times for x.
   If it costs 5¢ to go to the moving pictures once,
   It costs 6 × 5¢ or..... to go six times.
   It costs 4 × 5¢ or..... to go four times.
   It costs 7 × 5¢ or..... to go seven times.
   It costs 3 × 5¢ or..... to go three times.
   It costs 9 × 5¢ or..... to go nine times.
68. 10 = Two 5s, 15 = Three 5s, etc.

1. Count by 5s to 50, saying, "10 = two fives, 15 = three 5s, 20 = four 5s."

2. Read this. Say the right numbers where the dots are. Say equals or equal for =. Say times for ×.

   a. Three 5s = 15. \ldots 5s = 20. \ldots 5s = 40.
   b. \ldots 5s = 30. \ldots 5s = 35. \ldots 5s = 10.
   c. 20 = \ldots 5s. 30 = \ldots 5s. 40 = \ldots 5s.
   d. 45 = \ldots 5s. 25 = \ldots 5s. 35 = \ldots 5s.
   e. 5 \times 5 = 25. \ldots \times 5 = 30. \ldots \times 5 = 10.
   f. \ldots \times 5 = 40. \ldots \times 5 = 45. \ldots \times 5 = 15.
   g. \ldots 5s = 25. \ldots 5s = 45. 15 = \ldots 5s.
   h. 50 = \ldots 5s. \ldots \times 5 = 50. \ldots \times 5 = 35.

69. Playing Bean Bag

   The children played bean bag. Each child threw ten bags. A bag in the little circle counts 10. A bag in the triangle outside the circle counts 5. A bag in the big circle outside the triangle counts 0.
1. What was Tom's score? Will's score? George's?
2. What was Mary's score? Nell's? Alice's?
3. Fred had seven 5s and three 10s. What was his score?
4. John had nine 5s and one 10. What was his score?
5. How much higher was Fred's score than John's?

**70. Review**

1. Find the sum of $1.40, $.75, $1.89, $2.10, and $.98.
2. Find the sum of $2.00, $4.35, $.98, $.69, and $.83.
3. Find the sum of 79¢, 48¢, 75¢, 35¢, and $1.50.
4. How much must you add to $1.18 to make $3.75?
5. How much must you add to $2.25 to make $3.75?
6. How much must you add to $1.98 to make $3.25?
7. How much must you add to $2.49 to make $5.00?
71. Triangles, Squares, and Pentagons

This is an angle. This is a triangle. This is a square. This is a pentagon.

The children make angles, triangles, squares, and pentagons with toothpicks. Tell how many toothpicks you will need to make three separate squares like this: □ □ □

How many toothpicks do you need to make five separate triangles like this? △ △ △ △ △

A. State how many toothpicks you need to make—
   a. △ △ △ △ △
   b. □ □ □ □ □
   c. ○ ○ ○ ○
   d. △ △ △
   e. △ △ △
   f. △ △
   g. □ □

B. Say the right numbers where the dots are:
   Two 2s = ...
   Two 3s = ...
   Two 4s = ...
   Two 5s = ...
   Three 2s = ...
   Three 3s = ...
   Three 4s = ...
   Three 5s = ...
   Four 2s = ...
   Four 3s = ...
   Four 4s = ...
   Four 5s = ...
   2 × 4 =
   3 × 5 =
   4 × 5 =
   3 × 4 =
   5 × 5 =
   2 × 5 =
   4nickels = . . . č
   7nickels = . . . č
   . . . quart = 4 pt.
   . . . qt. = 6 pt.
   . . . yards = 9 feet
   . . . yd. = 6 ft.

C. Say the missing numbers. Remember that
   1 quart = 2 pints
   1 gallon = 4 quarts
   1 yard = 3 feet
   3 qt. = . . . pt.
   5 qt. = . . . pt.
   4 yd. = . . . ft.
   3 yd. = . . . ft.
   1 gallon = . . . qt.
   2 gal. = . . . qt.
   4 gal. = . . . qt.
72. 2s and 3s

1. Count by 2s to 20, beginning 2, 4, 6. Then count to 20, saying, "Two 2s are 4, Three 2s are 6," etc.
2. Count by 2s backward, saying, "Ten 2s are 20, nine 2s are 18, eight 2s are 16," and so on.
3. Read these lines. Say the right numbers where the dots are:
   Three 2s = ... Five 2s = ... Six 2s = ...
   Seven 2s = ... Eight 2s = ... Nine 2s = ...
   Four 2s = ... Ten 2s = ... Six 2s = ...
4. Read the three lines again. Read them as fast as you can.
5. Tell how many pints there are in 5 quarts. In 8 quarts. In 6 quarts. In 9 quarts.

73.

1. Count by 3s to 30, beginning 3, 6, 9.
2. Count by 3s backward, saying, "Ten 3s are 30, nine 3s are 27, eight 3s are 24," and so on.
3. Read these lines across. Say the right numbers where the dots are:
   Four 3s = ... Six 3s = ... Eight 3s = ... 
   Three 3s = ... Five 3s = ... Seven 3s = ...
   Nine 3s = ... Four 3s = ... Six 3s = ...
4. Say the missing numbers, reading down in columns.
5. Read the three lines until you can say all the right numbers in half a minute.
7. Say the missing numbers:
   \[6 \times 2 = \quad 3 \times 2 = \quad 4 \times 2 = \quad 5 \times 2 =\]
   \[6 \times 3 = \quad 3 \times 3 = \quad 4 \times 3 = \quad 5 \times 3 =\]
1. State the missing numbers:

- \(6 = \ldots \text{2s}\)
- \(12 = \ldots \text{2s}\)
- \(18 = \ldots \text{2s}\)
- \(10 = \ldots \text{2s}\)
- \(14 = \ldots \text{2s}\)
- \(16 = \ldots \text{2s}\)
- \(20 = \ldots \text{2s}\)
- \(8 = \ldots \text{2s}\)
- \(15 = \ldots \text{3s}\)
- \(21 = \ldots \text{3s}\)
- \(18 = \ldots \text{3s}\)
- \(27 = \ldots \text{3s}\)
- \(12 = \ldots \text{3s}\)
- \(24 = \ldots \text{3s}\)
- \(30 = \ldots \text{3s}\)
- \(9 = \ldots \text{3s}\)

2. State the missing numbers:

- \(\ldots \times 2 = 12\)
- \(\ldots \times 3 = 15\)
- \(\ldots \times 3 = 20\)
- \(\ldots \times 3 = 24\)
- \(\ldots \times 2 = 18\)
- \(\ldots \times 3 = 30\)
- \(\ldots \times 5 = 30\)
- \(\ldots \times 2 = 16\)
- \(\ldots \times 3 = 21\)
- \(\ldots \times 5 = 25\)
- \(\ldots \times 3 = 27\)
- \(6 \times \ldots = 12\)
- \(4 \times \ldots = 12\)

3. State the missing numbers:

- \(12 \text{ ft.} = \ldots \text{yd.}\)
- \(24 \text{ ft.} = \ldots \text{yd.}\)
- \(30 \text{ ft.} = \ldots \text{yd.}\)
- \(18 \text{ ft.} = \ldots \text{yd.}\)
- \(27 \text{ ft.} = \ldots \text{yd.}\)
- \(15 \text{ ft.} = \ldots \text{yd.}\)
- \(21 \text{ ft.} = \ldots \text{yd.}\)
- \(14 \text{ pt.} = \ldots \text{qt.}\)
- \(12 \text{ pt.} = \ldots \text{qt.}\)
- \(18 \text{ pt.} = \ldots \text{qt.}\)
- \(16 \text{ pt.} = \ldots \text{qt.}\)
- \(20 \text{ pt.} = \ldots \text{qt.}\)
- \(8 \text{ pt.} = \ldots \text{qt.}\)
- \(10 \text{ pt.} = \ldots \text{qt.}\)
- \(14 \text{ pt.} = \ldots \text{qt.}\)

How many two-cent stamps should you get—

For 10 cents?

For 18 cents?

For 12 cents?

For 16 cents?

For 14 cents?

For 20 cents?

For 8 cents?
1. Mary is giving a party. There will be eight girls at the party. How many sandwiches does she need to give each girl three? How many cakes does she need to give each girl two? How many pieces of candy does she need to give each girl five? She made four pints of cocoa. They had this in small cups, and a pint filled four cups. How many cupfuls did she make? How many cupfuls can each girl have?

2. Tell how many sandwiches and cakes are needed for a party of six boys, if each boy is to have five sandwiches and three cakes.

3. How many quarts of lemonade are needed to give each boy two glasses or a pint?

4. Dick is giving a birthday party. There are seven children at the party. The birthday cake is cut in 16 pieces. How many pieces will be left for Dick's father and mother if each boy eats only two? A 10-cent box contains 28 or 30 nabiscos. Will there be enough to give each child four nabiscos? Will there be enough to give each child five?

5. One quart of ice cream is enough to give five children two plates apiece. How many quarts are needed to give forty-five children at a big party two plates apiece?

6. How many lemons are needed to make six quarts of lemonade, if you use three lemons for a quart?

7. How much should a dozen and a half lemons cost at 20 cents a dozen?
When a parcel needs 5 cents for postage we can put on

5 one-cent stamps, or
2 two-cent stamps and 1 one-cent stamp, or
1 three-cent stamp and 1 two-cent stamp, or
1 five-cent stamp.

When a parcel needs 6 cents for postage we can put on

6 one-cent stamps, or
3 two-cent stamps, or
2 three-cent stamps, or
1 five-cent stamp and 1 one-cent stamp.

1. State ways to arrange the postage for a parcel that needs 7 cents postage, using five-cent stamps, three-cent stamps, two-cent stamps, and one-cent stamps.

2. State ways to arrange for a parcel that needs 8 cents postage.

3. State ways to arrange for a parcel that needs 9 cents postage.

4. State ways to arrange for a parcel that needs 10 cents postage.

5. State one way to arrange for 25¢ postage.

State ways to arrange—

6. For 11¢ postage.  13. For 18¢ postage.
8. For 13¢ postage.  15. For 20¢ postage.
9. For 14¢ postage.  16. For 21¢ postage.
10. For 15¢ postage.  17. For 22¢ postage.
11. For 16¢ postage.  18. For 23¢ postage.
12. For 17¢ postage.  19. For 24¢ postage.
1. Count by 4s to 40, beginning 4, 8, 12.
2. Count by 4s backward from 40, saying, "40 = ten 4s, 36 = nine 4s," and so on.

3. Find out how many quarts of water or sand are needed to fill the gallon measure.
4. Find out how many half pints or glasses one quart of water or sand will fill.
5. State the missing numbers: 2 gallons = ...qt.
   4 gallons = ...qt. 3 gallons = ...qt. 7 gallons = ...qt.
   6 gallons = ...qt. 9 gallons = ...qt. 5 gallons = ...qt.
6. 1 qt. = ... half pints
   3 qt. = ... half pints
   6 qt. = ... half pints
   5 qt. = ... half pints
   8 qt. = ... half pints
   4 qt. = ... half pints
   7 qt. = ... half pints
   9 qt. = ... half pints

7. Say the missing numbers. Say them again until you can say all the right numbers in a minute.

   5  2s = 9 × 2 = 4 × 2 = 2 × 1 =
   5  3s = 9 × 3 = 4 × 3 = 3 × 1 =
   5 × 4 = 9 × 4 = 4 4s = 4 × 1 =
   5 × 5 = 9 × 5 = 4 5s = 5 × 1 =
   6 × 2 = 7 2s = 8 2s = 6 × 1 =
   6 × 3 = 7 3s = 8 3s = 7 × 1 =
78. Review

Addition

Find the sums:

Problems

John has saved $1.68. Mary has saved $1.80.
Dick has saved $1.74. Nell has saved $1.56.

22. How much more does John need to have enough to buy a sled for $2.50?
23. How much will Dick have left if he buys a pair of skates for $1.10?
24. Have John and Dick together enough to buy an electric motor for $3.50?
25. Mary wishes to buy a big doll for $2.89. How much more does she need?
26. Nell wishes to buy a sewing machine for $3.00. How much more does she need?
27. How much more money has Dick than John? How much money have all four children together?
1. Learn this:

1 dime = 10 cents.  
1 nickel = 5 cents.  
1 yard = 3 feet.  

1 quart = 2 pints.  
1 quart = 4 half pints or glassfuls.  
1 gallon = 4 quarts.  

yd. means yard or yards.  
ft. means foot or feet.  
¢ means cent or cents.  

pt. means pint or pints.  
qt. means quart or quarts.  
gal. means gallon or gallons.  

2. Say the right numbers where the dots are:

A.  
3 dimes = ...¢  
6 dimes = ...¢  
7 dimes = ...¢  
8 dimes = ...¢  
9 dimes = ...¢  
2 dimes = ...¢  
4 dimes = ...¢  
5 dimes = ...¢  
10 dimes = ...¢  

B.  
4 nickels = ...¢  
7 nickels = ...¢  
5 nickels = ...¢  
2 nickels = ...¢  
8 nickels = ...¢  
3 nickels = ...¢  
6 nickels = ...¢  
10 nickels = ...¢  
9 nickels = ...¢  

C.  
2 gallons = ...qt.  
5 gallons = ...qt.  
10 gallons = ...qt.  
3 gallons = ...qt.  
7 gallons = ...qt.  
9 gallons = ...qt.  
8 gallons = ...qt.  
6 gallons = ...qt.  
4 gallons = ...qt.  

D.  
4 yd. = ...ft.  
6 yd. = ...ft.  
10 yd. = ...ft.  
3 yd. = ...ft.  
9 yd. = ...ft.  
7 yd. = ...ft.  
5 yd. = ...ft.  
8 yd. = ...ft.  

E.  
7 quarts = ...half pints  
3 quarts = ...half pints  
8 quarts = ...half pints  
4 quarts = ...half pints  
10 quarts = ...half pints  
7 quarts = ...half pints  
9 quarts = ...half pints  
6 quarts = ...half pints  

F.  
8 × 2 = ...  
6 × 2 = ...  
3 × 2 = ...  
5 × 2 = ...  
10 × 2 = ...  
4 × 2 = ...  
7 × 2 = ...  
9 × 2 = ...  

G.  
H.  
I.  
J.  
2 × 2 = ...  
2 × 3 = ...  
2 × 4 = ...  
2 × 5 = ...  
2 × 10 = ...  
3 × 2 = ...  
3 × 3 = ...  
3 × 4 = ...  
3 × 5 = ...  
3 ×10 = ...  
4 × 2 = ...  
4 × 3 = ...  
4 × 4 = ...  
4 × 5 = ...  
4×10 = ...  
5 × 2 = ...  
5 × 3 = ...  
5 × 4 = ...  
5 × 5 = ...  
5×10 = ...
4¢ EACH

FOR ANY ARTICLE ON THIS PAGE, MARKED DOWN
FROM 5 CENTS

DUST PAN  OIL CAN  PACKAGE OF ENVELOPES  BOX OF CRAYONS

TIN QUART MEASURE  KITCHEN SPOON  EGG BEATER  CAN OPENER

</tbody>
</table>

3. How many gallons make 16 qt.? 24 qt.? 28 qt.? 20 qt.? 36 qt.? 32 qt.? 12 qt.? 40 qt.?
4. How many quarts of lemonade are needed to fill 32 glasses, each holding a half pint? To fill 16 glasses? To fill 36 glasses? To fill 20 glasses?
5. How many quart bottles will a five-gallon can of milk fill? How many will an eight-gallon can fill? How many will a ten-gallon can fill?
6. How much is the total cost for 7 of the 4-cent articles on page 60? For 9 of them? For 6 of them? For 3 of them? For 5 of them?
7. If the price of the articles on page 60 was left at 5 cents each, how many could you buy for 35¢? For 45¢? For 30¢? For 15¢? For 40¢?
8. If the price of the articles on page 60 was marked down to 3 cents each, how many could you buy for 18¢? For 27¢? For 21¢? For 15¢?
81. Two 40s = 80, Three 40s = 120

1. State the missing numbers:

   40
   40
   40
   40

Three 40s = ____________  Four 40s = ____________

2. Two 40s = ____________  Four 40s = ____________
   4 \times 40 = \hspace{1cm} 3 \times 5 = \hspace{1cm} 5 \times 30 =
   Six 40s = ____________  Six 40s = ____________
   3 \times 40 = \hspace{1cm} 3 \times 50 = \hspace{1cm} 9 \times 20 =
   Eight 40s = ____________  Eight 40s = ____________
   8 \times 40 = \hspace{1cm} 7 \times 4 = \hspace{1cm} 2 \times 50 =
   Nine 40s = ____________  Nine 40s = ____________
   6 \times 3 = \hspace{1cm} 7 \times 40 = \hspace{1cm} 3 \times 40 =
   Seven 40s = ____________  Seven 40s = ____________
   6 \times 30 = \hspace{1cm} 8 \times 2 = \hspace{1cm} 7 \times 30 =
   Ten 40s = ____________  Ten 40s = ____________
   9 \times 2 = \hspace{1cm} 8 \times 20 = \hspace{1cm} 8 \times 40 =
   Five 40s = ____________  Five 40s = ____________
   9 \times 20 = \hspace{1cm} 8 \times 30 = \hspace{1cm} 6 \times 50 =

3. A man in a store had six piles of money, with 40 cents in each pile. How many cents did he have in all six piles together? How many dollars and how many cents is that?

4. Another man had 7 piles of money, with 50 cents in each pile. How many cents did he have in all 7 piles together? How many dollars and how many cents is that?

   In your answers to problems 5, 6, 7, and 8, say, "One dollar and twenty cents" for 120¢. Say, "Two dollars and eighty cents" for 280¢.

5. What is the cost of 6 pounds of crackers at 20 cents a pound?

6. What is the cost of 7 pounds of candy at 40 cents a pound?

7. What is the cost of 4 pounds of coffee at 30¢ a pound?

8. What is the cost of 3 pounds of tea at 50¢ a pound?
82. Practice with 2s, 3s, 4s, and 5s

State the missing numbers:

<table>
<thead>
<tr>
<th>A.</th>
<th>B.</th>
<th>C.</th>
<th>D.</th>
</tr>
</thead>
<tbody>
<tr>
<td>$3 \times 5 =$</td>
<td>$7 \times 4 =$</td>

</table>
1. How long is the rectangle on page 64?
2. How wide is it?
3. How many square inches are there in it?
4. How many pieces like this could you make out of the rectangle on page 64?

5. How many pieces like this could you make out of the rectangle?

6. Read this. Say the right numbers for the dots:
   A rectangle 3 inches wide and 6 inches long contains ....square inches. You could cut it into 9 little rectangles each containing ....square inches, or into 6 rectangles each containing ....square inches, or into 3 rectangles each containing ....square inches, or into 2 squares each containing ....square inches.

7. Draw a rectangle 4 inches wide and 6 inches long.
   Draw lines to cut it into 4 smaller rectangles each 2 inches wide and 3 inches long. Draw lines to cut one of these smaller rectangles into inch squares.
In the picture there are 24 boys marching. There are 3 rows of boys. There are 8 boys in each row.

1. How many rows will there be if 24 boys march 6 in a row? If they march 4 in a row?
2. If 32 children march 8 in a row, how many rows will there be? If they march 4 in a row?
3. How many rows will there be if 18 children march 3 in a row? If they march 6 in a row? If they march 2 in a row? If they march 9 in a row?
4. How many rows will there be if 21 children march 3 in a row? If they march 7 in a row?
5. How many rows will there be if 20 children march 4 in a row? If they march 2 in a row? If they march 5 in a row? If they march 10 in a row?
6. If there are 9 rows marching 5 in a row, how many children are there in all?
7. If there are 7 rows marching, 4 in each row, how many children are there in all?
8. If there are 8 rows of soldiers, 2 in each row, how many soldiers are there in all?
9. If there are 8 rows with 20 soldiers in each row, how many soldiers are there in all?
1. The children of the third grade are to have a picnic. 32 are going. How many sandwiches will they need if each of the 32 children has four sandwiches?

_Here is a quick way to find out:_

32 Think "4 \times 2," write 8 under the 2 in the ones column.

4 Think "4 \times 3," write 12 under the 3 in the tens column.

2. How many bananas will they need if each of the 32 children has two bananas? 32 \times 2 or 2 \times 32 will give the answer.

3. How many little cakes will they need if each child has three cakes? 32 \times 3 or 3 \times 32 will give the answer.

\[32 \quad 3 \times 2 = \ldots\quad \text{Where do you write the 6?}\]

\[3 \quad 3 \times 3 = \ldots\quad \text{Where do you write the 9?}\]

4. Prove that 128, 64, and 96 are right by adding four 32s, two 32s, and three 32s.

\[
\begin{array}{c}
32 \\
32 \\
32 \\
32 \\
\end{array}
\]

5. One long trolley car holds 42 men. Four long cars hold... men.

6. Three long trolley cars hold how many men?

7. One short car holds 23 men. Three short cars hold how many men?

8. One box of Uneeda biscuit contains 22 crackers. How many crackers are there in 4 boxes?

9. One ticket costs 31¢. 5 tickets cost...¢.
87. Multiplication

You **multiply** when you find the answers to questions like

- How many are $9 \times 3$?
- How many are $3 \times 32$?
- How many are $8 \times 5$?
- How many are $4 \times 42$?

1. Read these lines. Say the right numbers where the dots are:

   If you **add** 3 to 32, you have.... 35 is the **sum**.

   If you **subtract** 3 from 32, the result is.... 29 is the **difference** or **remainder**.

   If you **multiply** 3 by 32 or 32 by 3, you have.... 96 is the **product**.

Find the products. Check your answers to the first line by adding.

1. Find the total cost of 3 fancy French dolls that cost $4.23 each.

   This is the way:  $ 4.23
   \[
   \frac{3}{\underline{12.69}}
   \]

   We put $ before 12.69 to show that it means dollars and cents.
   We put a decimal point between the 2 and 6 to show that the 12 means dollars and the 69 means cents.

2. Find the total cost for 4 dresses that cost $1.12 each.
3. Find the total cost for 2 suits of clothes at $5.40 each.
4. Find the total cost of 3 dresses at $2.31 each.
5. Find the total cost of 3 fancy dolls, at $3.20 each.

   One railroad ticket from New York to Darien costs 91¢.
   One railroad ticket from New York to East Norwalk costs $1.02.
   One railroad ticket from New York to Fairfield costs $1.23.

6. Find the cost of 3 tickets from New York to Fairfield.
7. Find the cost of 4 tickets from New York to East Norwalk.

8. Find the cost of 5 tickets from New York to Darien.
9. Check your answers to 6, 7, and 8 by adding.

91. Multiplication

Find the products:

1.

\[
\begin{array}{c}
125 \\
5 \\
\hline
25
\end{array}
\]

Think "5 × 5 = 25." Write the 5 in the ones column. Remember the 2.

\[
\begin{array}{c}
5 \\
2 \quad 10 \\
\hline
12
\end{array}
\]

Think "5 × 2 = 10. 10 and 2 = 12." Write the 2 in the tens column. Remember the 1.

Think "5 × 1 = 5. 5 and 1 = 6." Write the 6.

\[
\begin{array}{cccccccc}
125 & 42 & 142 & 23 & 43 & 115 & 123 \\
7 & 8 & 7 & 5 & 3 & 7 & 6
\end{array}
\]
Multiplication

344 344 213 53 215 215 125
 2 3 4 8 4 3   

16.
Think "6 x 0 = 0." Write 0 in the ones column.

6 Think "6 x 5 = 30." Write 0 in the tens column. Remember the 3.
Think "6 x 1 = 6." 6 and 3 = 9. Write 9.

17. 18. 19. 20. 21. 22. 23.
$2.50  $1.25  $1.50  $0.25  $1.20  $2.40  $1.30
 6 4 5 6 3 4  

24. 25.
153 Check your answer to 24 by writing 6 x 3 = 18

6
6 x 50 = 300
6 x 100 = 600
The sum is 918

26. State the products:

A. B. C. D.
3 x 2 = 4 x 1 = 2 x 40 = 30 40
3 x 20 = 4 x 10 = 2 x 4 = 4 4
3 x 200 = 4 x 100 = 2 x 400 = 20 40
4 x 20 = 5 x 100 = 3 x 20 = 6 6
4 x 200 = 5 x 200 = 4 x 20 = 6 6
2 x 30 = 2 x 300 = 3 x 40 = 30 70
2 x 300 = 3 x 300 = 3 x 100 = 6 6

27. Read these numbers: 80 800 25 425 201
210 241 405 504 524 306 360 762
726 267 330 333 692 999 777.
92. Practice in Multiplying

Find the products:

1. 254 142 35 32 123 124
2. 3 6 9 8 8 7
3. 3 × 4 = 12
4. 6 × 2 = 12
5. 9 × 5 = 45
6. 3 × 50 = 150
7. 9 × 30 = 270
8. 3 × 200 = 600
9. 6 × 100 = 600

Find the products:

10. 250 435 115 154 133 153
11. 3 2 8 5 7 6
12. 3 × 50 = 150
13. 2 × 5 = 10
14. 19. Check your answers to
15. 3 × 200 = 600
16. 2 × 30 = 60
17. 2 × 400 = 800
18. 14 and 15.

20. There are 24 hours in a day. How many hours are there in 5 days?
21. How many days are there in 52 weeks?
22. One yard = 36 inches. How many inches are there in 3 yards?
23. One bushel = 32 quarts. 8 bushels = how many quarts?
24. One year equals 365 days. 2 years equal... days.
93. The Table of $2 \times 6$ to $10 \times 6$

1. Count by 6s to 60, beginning 6, 12, 18.
2. Count by 6s backward from 60, saying, "Ten 6s = 60, nine 6s = 54," and so on.
3. Learn the table of 6s from $2 \times 6 = 12$ to $10 \times 6 = 60$.
4. Say the missing numbers:
   A. B. C. D.
   Seven 6s = $7 \times 6 = 7 \times 6 = 3 \times 6 =$
   Three 6s = $5 \times 6 = 8 \times 6 = 4 \times 6 =$
   Nine 6s = $6 \times 2 = 1 \times 6 = 5 \times 6 =$
   Five 6s = $6 \times 3 = 6 \times 6 = 6 \times 6 =$
   Four 6s = $6 \times 4 = 6 \times 1 = 7 \times 6 =$

5. Find the products:

   \[
   \begin{array}{ccccccc}
   a & b & c & d & e & f & g & h \\
   \$2.65 & \$ .36 & \$.65 & \$1.26 & \$4.06 & \$.65 & \$1.63 & \$.46 \\
   3 & 9 & 6 & 7 & 2 & 9 & 5 & 8 \\
   \end{array}
   \]

6. Find the missing numbers.

   $\frac{1}{2}$ means one half.
   $\frac{1}{3}$ means one third.
   $\frac{1}{4}$ means one fourth.

   A. B. C. D.
   $\ldots 6s = 18$ $60 = \ldots 6s$ $\frac{1}{2}$ of 8 = $\frac{1}{2}$ of 12 =
   $\ldots 6s = 12$ $12 = \ldots 6s$ $\frac{1}{2}$ of 10 = $\frac{1}{2}$ of 8 =
   $\ldots 6s = 24$ $54 = \ldots 6s$ $\frac{1}{2}$ of 12 = $\frac{1}{2}$ of 20 =
   $\ldots 6s = 30$ $24 = \ldots 6s$ $\frac{1}{2}$ of 20 = $\frac{1}{2}$ of 16 =
   $\ldots 6s = 60$ $36 = \ldots 6s$ $\frac{1}{3}$ of 12 = $\frac{1}{3}$ of 160 =
   $\ldots 6s = 42$ $18 = \ldots 6s$ $\frac{1}{3}$ of 18 = $\frac{1}{3}$ of 80 =
   $\ldots 6s = 54$ $42 = \ldots 6s$ $\frac{1}{3}$ of 9 = $\frac{1}{3}$ of 24 =

7. Count to $\frac{1}{6}$ of 60, saying, "One sixth of 6 is 1, one sixth of 12 is 2, $\frac{1}{6}$ of 18 is 3, $\frac{1}{6}$ of 24 is 4," and so on.
94. Square Feet

1. The teacher will show, on the blackboard, rectangles containing 1 square foot, 2 square feet, 4 square feet, and 10 square feet. Look at them. Then tell how many square feet there will be in a rectangle 3 feet long and 2 feet wide.

Think of the top of the teacher’s desk.
Think of the door of your room at home.
Think of the floor of the schoolroom.

2. Which contains about 10 square feet?
3. Which contains about 20 square feet?
4. Which contains about 500 square feet?
5. Draw on the blackboard a rectangle 4 ft. long and 2 ft. wide. How many square feet does it contain?
6. Draw a rectangle 3 ft. long and 3 ft. wide. How many square feet does it contain?

95. Drawing Plans

This is the plan of a room. — stands for 1 foot long. □ stands for one square foot.
1. The bed is 6 feet long by 4 feet wide. How many square feet does it cover?
2. The couch is 7 feet by 3 feet. How many square feet does it cover?
3. The big rug is 6 by 9 feet. How many square feet does it cover?
4. The table is 3 by 4 feet. How many square feet does it cover?
5. The little rug is $5 \times 7$ feet. How many square feet does it cover?
6. This is the plan of Tom’s garden. How long and how wide is the space for carrots?
7. How long and how wide is the space which is planted with beans?
8. How long and how wide is the space for corn?
9. How many square feet are planted with carrots? With beans? With beets? With lettuce? With corn? (Use pencil if you need to.)
10. How many square feet are there in the path between the corn and the beets and the lettuce?
11. Draw a plan of a garden. Let one inch stand for four feet. Then $\frac{1}{2}$ inch will stand for how many feet? An inch and a half will stand for how many feet? Two inches will stand for how many feet? Three inches?
96. Mary's Garden

1. Mary has a flower garden. Her bed of roses is 10 ft. long and 6 ft. wide. How many square feet does it contain?

2. Her bed for tulips is 8 ft. long and 6 ft. wide. How many square feet does it contain?

3. Her bed for poppies is 8 ft. long and 4 ft. wide. How many sq. ft. does it contain?

4. Her bed for pansies is 10 ft. long and 2 ft. wide. How many sq. ft. does it contain?

Use pencil and paper for problems 5 to 14. Write sq. ft. after each answer to show what the number means.

We call the number of square feet in a flower bed its AREA.

5. What is the total area of all four flower beds in Mary's garden?

6. How much larger is the area of the rose bed than the area of the poppy bed?

7. Next year Mary plans to have a poppy bed with 50 square feet in it. How many more square feet will it have then than it has now?

8. What is the area of a big flower bed 8 feet wide and 46 feet long?

How many square feet are there —

9. In a path 6 feet wide and 162 feet long?

10. In a path 3 feet wide and 254 feet long?

11. In a path 5 feet wide and 86 feet long?

12. In a path 4 feet wide and 154 feet long?

13. In the floor of a room 9 feet by 21 feet?

14. In the floor of a room 8 feet by 16 feet?
1. Count by 7s to 70, beginning 7, 14, 21.
2. Count by 7s backward from 70, saying, "Ten 7s equal 70, nine 7s equal 63," and so on.
3. Learn the table of 7s from $2 \times 7 = 14$ to $10 \times 7 = 70$.
4. State the missing numbers:

   wk. means week or weeks.

<table>
<thead>
<tr>
<th>A</th>
<th>B</th>
<th>C</th>
</tr>
</thead>
<tbody>
<tr>
<td>2 7s =</td>
<td>1 wk. = . . . days</td>
<td>If boys march 7 in a row</td>
</tr>
<tr>
<td>4 7s =</td>
<td>3 wk. = . . . days</td>
<td>2 rows will be . . . boys</td>
</tr>
<tr>
<td>3 7s =</td>
<td>6 wk. = . . . days</td>
<td>3 rows will be . . . boys</td>
</tr>
<tr>
<td>5 7s =</td>
<td>5 wk. = . . . days</td>
<td>5 rows will be . . . boys</td>
</tr>
<tr>
<td>10 7s =</td>
<td>9 wk. = . . . days</td>
<td>8 rows will be . . . boys</td>
</tr>
<tr>
<td>9 7s =</td>
<td>8 wk. = . . . days</td>
<td>6 rows will be . . . boys</td>
</tr>
<tr>
<td>6 7s =</td>
<td>10 wk. = . . . days</td>
<td>10 rows will be . . . boys</td>
</tr>
<tr>
<td>8 7s =</td>
<td>7 wk. = . . . days</td>
<td>9 rows will be . . . boys</td>
</tr>
<tr>
<td>7 7s =</td>
<td>4 wk. = . . . days</td>
<td>7 rows will be . . . boys</td>
</tr>
</tbody>
</table>

5. Find the products:

<table>
<thead>
<tr>
<th>a.</th>
<th>b.</th>
<th>c.</th>
<th>d.</th>
<th>e.</th>
<th>f.</th>
<th>g.</th>
<th>h.</th>
</tr>
</thead>
<tbody>
<tr>
<td>25</td>
<td>175</td>
<td>27</td>
<td>123</td>
<td>170</td>
<td>64</td>
<td>207</td>
<td>37</td>
</tr>
<tr>
<td>___</td>
<td>___</td>
<td>___</td>
<td>___</td>
<td>___</td>
<td>___</td>
<td>___</td>
<td>___</td>
</tr>
<tr>
<td>7</td>
<td>5</td>
<td>4</td>
<td>7</td>
<td>5</td>
<td>6</td>
<td>8</td>
<td>9</td>
</tr>
</tbody>
</table>

6. Find the area in square feet of a path 76 feet long —
   a. If it is 3 feet wide.   b. If it is 7 feet wide.

7. State the products:

   | $7 \times 2$ = | $8 \times 2$ = | $9 \times 2$ = | $6 \times 2$ = | $5 \times 2$ = |
   | $7 \times 3$ = | $8 \times 3$ = | $9 \times 3$ = | $6 \times 3$ = | $5 \times 3$ = |
   | $7 \times 4$ = | $8 \times 4$ = | $9 \times 4$ = | $6 \times 4$ = | $5 \times 4$ = |
   | $7 \times 5$ = | $8 \times 5$ = | $9 \times 5$ = | $6 \times 5$ = | $5 \times 5$ = |
   | $7 \times 6$ = | $8 \times 6$ = | $9 \times 6$ = | $6 \times 6$ = | $5 \times 6$ = |
   | $7 \times 7$ = | $8 \times 7$ = | $9 \times 7$ = | $6 \times 7$ = | $5 \times 7$ = |

8. Repeat all the work of the page until you can get all the right answers in 10 minutes.
98. Dividing a Number into 7s

State the missing numbers:

<table>
<thead>
<tr>
<th>A.</th>
<th>B.</th>
<th>C.</th>
</tr>
</thead>
<tbody>
<tr>
<td>...7s = 70</td>
<td>14 days = ... weeks</td>
<td>35 = ... 7s</td>
</tr>
<tr>
<td>...7s = 63</td>
<td>70 days = ... weeks</td>
<td>21 = ... 7s</td>
</tr>
<tr>
<td>...7s = 14</td>
<td>42 days = ... weeks</td>
<td>14 = ... 7s</td>
</tr>
<tr>
<td>...7s = 28</td>
<td>21 days = ... weeks</td>
<td>28 = ... 7s</td>
</tr>
<tr>
<td>...7s = 35</td>
<td>49 days = ... weeks</td>
<td>56 = ... 7s</td>
</tr>
<tr>
<td>...7s = 21</td>
<td>56 days = ... weeks</td>
<td>42 = ... 7s</td>
</tr>
<tr>
<td>...7s = 49</td>
<td>63 days = ... weeks</td>
<td>63 = ... 7s</td>
</tr>
<tr>
<td>...7s = 56</td>
<td>28 days = ... weeks</td>
<td>49 = ... 7s</td>
</tr>
</tbody>
</table>

99. Review

Look at the first three lines in the columns carefully. Study them. Think what ÷ means.

Then give the missing numbers in the rest of the columns.

<table>
<thead>
<tr>
<th>D. 6 ÷ 3 = 2</th>
<th>E. 20 ÷ 4 = 5</th>
<th>F. 14 ÷ 7 = 2</th>
</tr>
</thead>
<tbody>
<tr>
<td>12 ÷ 3 = 4</td>
<td>28 ÷ 4 = 7</td>
<td>63 ÷ 7 = 9</td>
</tr>
<tr>
<td>30 ÷ 3 = 10</td>
<td>12 ÷ 4 = 3</td>
<td>21 ÷ 7 = 3</td>
</tr>
<tr>
<td>21 ÷ 3 = ...</td>
<td>40 ÷ 4 = ...</td>
<td>28 ÷ 7 = ...</td>
</tr>
<tr>
<td>15 ÷ 3 = ...</td>
<td>32 ÷ 4 = ...</td>
<td>56 ÷ 7 = ...</td>
</tr>
<tr>
<td>24 ÷ 3 = ...</td>
<td>16 ÷ 4 = ...</td>
<td>70 ÷ 7 = ...</td>
</tr>
<tr>
<td>9 ÷ 3 = ...</td>
<td>24 ÷ 4 = ...</td>
<td>42 ÷ 7 = ...</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>G. 24 ÷ 6 =</th>
<th>H. 24 ÷ 3 =</th>
<th>I. 36 ÷ 4 =</th>
<th>J. 14 ÷ 7 =</th>
</tr>
</thead>
<tbody>
<tr>
<td>36 ÷ 6 =</td>
<td>24 ÷ 4 =</td>
<td>36 ÷ 6 =</td>
<td>21 ÷ 7 =</td>
</tr>
<tr>
<td>12 ÷ 6 =</td>
<td>24 ÷ 6 =</td>

29. 30. 31. 32. 33. 34. 35.

| 165 | 127 | 470 | 106 | 325 | 111 | 76  |
| 5   | 7   | 2   | 8   | 3   | .9  | 9   |

2 7 3 6 5 1 4

36. Multiply each of these numbers by 5 and add 3 to the product.
37. Multiply each of them by 7 and add 1 to the product.
38. Multiply each of them by 4 and add 5 to the product.
102. Making Multiplication Tables and Division Tables  81

1. Take a sheet of paper. Write

\[ 2 \times 8 = 16 \]
\[ 3 \times 8 = 24 \]
\[ 4 \times 8 = 32 \]

and the other products of 8, up to \( 10 \times 8 = 80 \):

You can find out what to write by counting by 8s and remembering what you have learned. Show the numbers that you write to the teacher. Then, if she says they are all right, study them until you know them.

2. There are 8 pints in a gallon. How many pints are there in 6 gallons? In 3 gallons? In 7 gallons? In 4 gallons? In 9 gallons? In 5 gallons? In 2 gallons? In 10 gallons?

4. The boys are marching 8 in a row. How many boys are there in 5 rows? In 3 rows? In 9 rows? In 6 rows? In 4 rows? In 2 rows?

5. Write the products. Remember that \( 2 \times 0 = 0 \), \( 3 \times 0 = 0 \), \( 4 \times 0 = 0 \), etc.

\[ 58 \quad 180 \quad 87 \quad 106 \quad 208 \quad 75 \quad 280 \quad 68 \]
\[ 7 \quad 5 \quad 6 \quad 8 \quad 4 \quad 8 \quad 3 \quad 9 \]

6. Take a sheet of paper. Write \( 16 \div 8 = 2 \)

\[ 24 \div 8 = 3 \]

and the other numbers that tell about dividing by 8, up to \( 80 \div 8 = 10 \).

You can find out by yourself what to write.
State the missing numbers:
1. \[32 \div 8 = 16 \div 8 = 48 \div 8 = 24 \div 8 = 40 \div 8 =
\]
\[80 \div 8 = 72 \div 8 = 56 \div 8 = 64 \div 8 = 8 \div 8 =\]

pk. means peck or pecks.

2. \[8 \text{ qt.} = 1 \text{ pk.} \quad 16 \text{ qt.} = . . \text{pk.} \quad 40 \text{ qt.} = . . \text{pk.}\]
\[32 \text{ qt.} = . . \text{pk.} \quad 64 \text{ qt.} = . . \text{pk.} \quad 24 \text{ qt.} = . . \text{pk.}\]
\[48 \text{ qt.} = . . \text{pk.} \quad 72 \text{ qt.} = . . \text{pk.} \quad 56 \text{ qt.} = . . \text{pk.}\]

What change should you get, if milk costs 8¢ a quart, when —

3. You buy 4 quarts and pay with a 25-cent piece and a dime?

4. You buy 6 quarts and pay with five dimes?

5. You buy 9 quarts and pay with a 50-cent piece and a 25-cent piece?

6. You buy 7 quarts and pay with a 50-cent piece and a dime?

7. You buy 5 quarts and pay with a 50-cent piece?

What change should you get when —

8. You buy 7 two-cent stamps and pay with a dime and a nickel?

9. You buy 3 four-cent stamps and pay with a dime and a nickel?

Read these lines. Say the right numbers where the dots are:

12. Divide 32¢ equally among 8 boys. Each boy gets . . . ¢.

Repeat all the work of this page.
104. Making Tables of 9s

Take a sheet of paper. Write the numbers that tell about multiplying and dividing with 9. They begin like this. You can think out those that you do not know already.

<table>
<thead>
<tr>
<th>Multiplying with 9</th>
<th>Dividing with 9</th>
</tr>
</thead>
<tbody>
<tr>
<td>$1 \times 9$ or $9 \times 1 = 9$</td>
<td>$9 \div 9 = 1$</td>
</tr>
<tr>
<td>$2 \times 9$ or $9 \times 2 = 18$</td>
<td>$18 \div 9 = 2$</td>
</tr>
<tr>
<td>$3 \times 9$ or $9 \times 3 = 27$</td>
<td>$27 \div 9 = 3$</td>
</tr>
</tbody>
</table>

When you have the tables all right, learn them.

105.

A square yard means a square 1 yard long and 1 yard wide.

1. Draw a square yard on the blackboard. Divide it into square feet.

2. How many square feet are there in 1 square yard? In 2 square yards? In 7 square yards?

*We write sq. yd. for square yard or square yards.*
*We write sq. ft. for square feet.*

3. How many sq. ft. are there in 5 sq. yd.? In 9 sq. yd.? In 8 sq. yd.? In 4 sq. yd.? In 3 sq. yd.?

4. If one yard of cloth costs 9 cents, how much do 4 yards of it cost? How much do 9 yards cost? How much do 6 yards cost? 5 yards? 7 yards?

5. Find the products:

<table>
<thead>
<tr>
<th>a.</th>
<th>b.</th>
<th>c.</th>
<th>d.</th>
<th>e.</th>
<th>f.</th>
<th>g.</th>
<th>h.</th>
</tr>
</thead>
<tbody>
<tr>
<td>89</td>
<td>98</td>
<td>80</td>
<td>109</td>
<td>249</td>
<td>48</td>
<td>95</td>
<td>79</td>
</tr>
<tr>
<td>7</td>
<td>3</td>
<td>9</td>
<td>9</td>
<td>4</td>
<td>9</td>
<td>6</td>
<td>6</td>
</tr>
</tbody>
</table>

6. Check your products by multiplying and adding.

- $7 \times 9 = 63$
- $3 \times 8 = 24$
- $9 \times 9 = 81$
- $7 \times 80 = 560$
- $3 \times 90 = 270$
- $9 \times 100 = 900$
1. Tom, Dick, Will, and Fred put in 2 cents each to buy an eight-cent bag of marbles. There are 128 marbles in it. How many should each boy have, if they divide the marbles equally among the four boys?

\[ \begin{array}{c}
\text{4} \\
\hline
\text{128}
\end{array} \]

Think "12 = three 4s." Write the 3 over the 2 in the tens column.
Think "8 = two 4s." Write the 2 over the 8 in the ones column.
32 is right because \(4 \times 32 = 128\).

2. Mary, Nell, and Alice are going to buy a book as a present for their Sunday-school teacher. The present costs 69 cents. How much should each girl pay, if they divide the cost equally among the three girls?

\[ \begin{array}{c}
\text{3} \\
\hline
\text{69}
\end{array} \]

Think "6 = . . . 3s." Write the 2 over the 6 in the tens column.
Think "9 = . . . 3s." Write the 3 over the 9 in the ones column.
23 is right, for \(3 \times 23 = 69\).

3. Divide the cost of a 96-cent present equally among three girls. How much should each girl pay? \(3|96\)

4. Divide the cost of an 84-cent present equally among 4 girls. How much should each girl pay?

5. Learn this: (Read \(\div\) as "divided by."")

\[
\begin{align*}
12 + 4 &= 16. & \text{16 is the sum.} \\
12 - 4 &= 8. & \text{8 is the difference or remainder.} \\
12 \times 4 &= 48. & \text{48 is the product.} \\
12 + 4 &= 3. & \text{3 is the quotient.}
\end{align*}
\]

6. Find the quotients. Check your answers by multiplying.

\[ \begin{array}{c|c|c|c|c|c|c}
3 & 99 & 2 & 86 & 5 & 155 & 6 & 246 & 4 & 168 & 3 & 219
\end{array} \]
107. Practice in Division

Find the quotients. Divide. Remember that 0 means **no, not any, none.** 0 divided by 4 = 0. 0 divided by 2 = 0. 0 = 0 3s, or 0 5s, or 0 6s.

1.  

\[
\begin{array}{c}
2 \overline{\mid 460} \\
\end{array}
\]

*Write the 2 over the 4. Write the 3 over the 6. Write 0 over the 0.*

2. 3. 4. 5. 6. 7. 8. 9. 10. 11. 12. 13. 14. 15. 16. 17. 18. 19.

\[
\begin{array}{cccccccc}
3 & 690 & 3 & 90 & 5 & 350 & 9 & 270 & 4 & 840 & 8 & 560 \\
9 & 720 & 9 & 369 & 7 & 210 & 3 & 960 & 5 & 35 & 5 & 450 \\
4 & 88 & 2 & 846 & 6 & 420 & 4 & 484 & 7 & 147 & 8 & 240 \\
\end{array}
\]

108. Problems

1. Tom had 56 pennies in his bank. He put 8 cents more in. How much did he have then?

2. Will had 56 pennies in his bank. He took 8 cents out and spent it. How much did he have then?

3. John had 56 pennies in his bank. He divided the money into eight equal parts. How many cents were there in each part?

4. George had 56 pennies in his bank. He said, "I wish I had 8 times as much." How much would that be?

5. Mary has a collection of 568 picture postcards. She buys a book to put them in. How many pages will they fill if Mary puts eight on each page?
109. Buying Stationery

<table>
<thead>
<tr>
<th>Pencils, 2¢ each.</th>
<th>Envelopes, 6¢ a package.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Penholders, 3¢ each.</td>
<td>Crayons, 7¢ a box.</td>
</tr>
<tr>
<td>Erasers, 4¢ each.</td>
<td>Pads, 8¢ each.</td>
</tr>
<tr>
<td>Ink, 5¢ a bottle.</td>
<td>Notebooks, 9¢ each.</td>
</tr>
</tbody>
</table>

Supply the missing numbers:

A.
For 10¢ you get...pencils.
For 10¢ you get...penholders and ...¢ change.
For 10¢ you get...erasers and ...¢ change.
For 10¢ you get...bottles of ink.
For 15¢ you get...pencils and ...¢ change.
For 15¢ you get...penholders.
For 15¢ you get...erasers and ...¢ change.

B. C.
10 = ...3s and...remainder. 5 = ...2s and...remainder.
10 = ...4s and...remainder. 5 = ...3 and...remainder.
10 = ...5s and no remainder. 5 = ...4 and...remainder.
15 = ...2s and...remainder. 6 = ...2s.
15 = ...3s. 6 = ...3s.
15 = ...4s and...remainder. 6 = ...4 and...remainder.
15 = ...5s. 6 = ...5 and...remainder.
15 = ...6s and...remainder. 7 = ...2s and...remainder.
15 = ...7s and...remainder. 7 = ...3s and...remainder.

Read these lines. Say the right numbers where the dots are. Read "remainder" where you see r.

D. E. F.
8 = ...2s. 9 = ...2s and...r. 11 = ...2s and...r.
8 = ...3s and...r. 9 = ...3s. 11 = ...3s and...r.
8 = ...4s. 9 = ...4s and...r. 11 = ...4s and...r.
8 = ...5 and...r. 9 = ...5 and...r. 11 = ...5s and...r.
8 = ...6 and...r. 9 = ...6 and...r. 11 = ...6 and...r.
8 = ...7 and...r. 9 = ...7 and...r. 11 = ...7 and...r.
Nell, Alice, and four other girls were going to a picnic. Nell planned to take four boxes of Uneeda biscuit, but Alice said, "Is n't that too many? That will be 88 crackers, or 14 crackers apiece and four left over." Was Alice right?

Think "8 = one 6 and 2 remainder." Write 1 over the first 8.
Think "28 = four 6s and 4 remainder." Write 5 over the 8 of 28.

Alice planned to take 3 ten-cent boxes of nabiscos. Alice said, "If there are 30 nabiscos in a ten-cent box, that will be just 15 nabiscos apiece." Was she right?

Think "9 = one 6 and 3 remainder." Write 1 over the 9.
Think "30 = five 6s and no remainder." Write 4 over the 0 of 30.

The girls said to Alice, "You like to divide so well, you may teach all of us division." So Alice taught them to find the quotients and remainders for these examples. See if you can get them all right without anybody to teach you!

<table>
<thead>
<tr>
<th>1.</th>
<th>2.</th>
<th>3.</th>
<th>4.</th>
<th>5.</th>
<th>6.</th>

| 14 = ...9s and ...r. | 18 = ...9s. | 21 = ...9s and ...r. |
112. Practice in Dividing

Find the quotients and the remainders:

1. \[\frac{129}{6}\] 2. \[\frac{127}{7}\] 3. \[\frac{197}{9}\] 4. \[\frac{136}{8}\] 5. \[\frac{175}{5}\] 6. \[\frac{163}{3}\] 7. \[\frac{184}{8}\]
8. \[\frac{992}{8}\] 9. \[\frac{780}{9}\] 10. \[\frac{193}{5}\] 11. \[\frac{214}{6}\] 12. \[\frac{158}{9}\] 13. \[\frac{177}{3}\] 14. \[\frac{685}{8}\]
15. \[\frac{879}{9}\] 16. \[\frac{127}{4}\] 17. \[\frac{114}{4}\] 18. \[\frac{793}{7}\] 19. \[\frac{954}{8}\] 20. \[\frac{142}{5}\] 21. \[\frac{160}{5}\]

Find the quotients. If you divide correctly and subtract correctly there will be no remainders.

22. \[\frac{117}{3}\] 23. \[\frac{135}{5}\] 24. \[\frac{292}{4}\] 25. \[\frac{134}{2}\] 26. \[\frac{215}{5}\] 27. \[\frac{192}{6}\] 28. \[\frac{450}{6}\]
29. \[\frac{180}{5}\] 30. \[\frac{144}{3}\] 31. \[\frac{238}{7}\] 32. \[\frac{364}{4}\] 33. \[\frac{532}{7}\] 34. \[\frac{296}{8}\] 35. \[\frac{434}{7}\]
36. \[\frac{406}{7}\] 37. \[\frac{340}{4}\] 38. \[\frac{132}{2}\] 39. \[\frac{360}{8}\] 40. \[\frac{510}{6}\] 41. \[\frac{336}{7}\] 42. \[\frac{252}{9}\]
43. \[\frac{196}{4}\] 44. \[\frac{231}{7}\] 45. \[\frac{180}{4}\] 46. \[\frac{171}{3}\] 47. \[\frac{333}{9}\] 48. \[\frac{564}{6}\] 49. \[\frac{696}{8}\]

113.

1. January has 31 days. How many weeks are there in January and how many days left over?
2. February usually has 28 days. How many weeks are there in February?
3. April has 30 days. How many weeks are there in April and how many days left over?
State the quotient and remainder for each of these:

<table>
<thead>
<tr>
<th>A.</th>
<th>B.</th>
<th>C.</th>
<th>D.</th>
<th>E.</th>
<th>F.</th>

</tbody>
</table>

Repeat this page until you can give all the quotients and remainders correctly in 20 minutes or less.
Dividing with Numbers That Mean Dollars and Cents

Find the quotients. Put $ before each quotient to show that the numbers mean dollars and cents. Put a decimal point in each quotient to show which numbers mean dollars and which numbers mean cents.

1. Divide $16.38 equally among 7 girls.
2. Divide $30.24 equally among 7 girls.
3. Divide $30.24 equally among 9 girls.
5. Divide $30.24 equally among 8 girls.
6. Six persons buy a victrola together for $15.00 and divide the cost equally. How much does each person pay?
7. Nine boys buy a boat together for $24.75 and divide the cost equally. How much does each boy pay?
8. At the end of the summer they sell it for $15.75. How much does each one get?

When the quotient means only cents, like $.73 or $.42 or $.98, you may write it $.73 or 73¢, $.42 or 42¢, $.98 or 98¢.

9. Three girls bought a croquet set for $2.88 and divided the cost equally. How much did each girl pay?
10. Five boys bought a football for $1.95 and divided the cost equally. How much did each boy pay?
11. Tom and Will each worked 5 days in a store. Tom received $4.00 in all. Will received 75 cents a day. Which one got the higher wages?
12. Nine girls plan to buy a present for their club leader, and divide the cost equally. How much must each give if they get a book for $1.44?
116. Practice with Quotients and Remainders

Take a large sheet of paper. Write the numbers to show the quotients and remainders when you divide 45, 46, 47, 48, etc. Begin with

\[
\begin{array}{c|c}
9 & 7 \\
5 & 6 & 7 \\
4 & 5 & 45
\end{array}
\]

6 and 3 r.

Use all the numbers from 45 to 80.

Divide the numbers up to 50 by 5, 6, 7, 8, and 9. After 50 you need not divide by 5. After 60 you need not divide by 6. After 70 you need not divide by 7.

117. Review

2 5 8 3 9 7 6 4

1. Multiply each of these numbers by 9 and add 2 to the product.
2. Multiply each of them by 8 and add 3 to the product.
3. Multiply each of them by 7 and add 4 to the product.
4. Multiply each of them by 6 and add 5 to the product.
5. Multiply each of them by 5 and add 3 to the product.
6. Multiply each of them by 4 and add 4 to the product.

118.

1. Count by 7s to 71, beginning 1, 8, 15, 22.
2. Count by 7s to 72, beginning 2, 9, 16, 23.
3. Count by 7s to 73, beginning 3, 10, 17, 24.
4. Count by 7s to 74, beginning 4, 11, 18, 25.
5. Count by 6s to 61, beginning 1, 7, 13, 19.
6. Count by 6s to 62, beginning 2, 8, 14, 20.
7. Count by 6s to 63, beginning 3, 9, 15, 21.
8. Count by 6s to 64, beginning 4, 10, 16, 22.
9. Add $1.89, $2.67, $1.58, $1.75, and $.46.
1. Find the total cost of 9 articles that cost $.25 each.
2. Find the total cost of 3 articles that cost $1.98 each.
3. Find the total cost of 7 articles that cost $.75 each.
4. Tom, Dick, Will, and Fred each earned 35¢. How much did they earn in all?
5. How much more do they need to buy a football for $1.50?
6. There were 9 girls in the sewing class. Each girl hemmed a half dozen napkins. How many napkins did they hem in all?
7. It took Nell 7 hours to hem the first three and 4 hours to hem the last three. Later she hemmed a half dozen more in an hour apiece. How long did it take her for all twelve?
8. Nell's napkins were all sold at the church fair at three for $1.25. How much was received for the whole dozen?
9. Grace made 6 doilies for the fair, which sold for $.75 each. How much was received for all?
10. Nell's mother took her and some other girls to the fair. She bought 7 admission tickets for 35¢ each. How much did she pay in all for the tickets?
11. She bought ice cream and cake for 7 persons at 15¢ for each person. How much did she pay for ice cream and cake?
12. She bought 6 aprons at 30¢ each and 4 holders for 10¢ each. How much did she pay in all for the aprons and holders?
13. Find the total cost of 8 tickets at 35 cents each,
120. Telling Time

1. This clock has more numbers on it than ordinary clocks have. What do you think the outside numbers (5, 10, 15, 20) tell, hours or minutes?

2. What do the inside numbers (1, 2, 3, 4) tell?

3. Which hand do you look at to see what hour it is?

4. Which hand tells you whether it is 5 minutes past 9, or 10 minutes past 9, or 15 minutes past 9, or half past?

5. Read the inside numbers up to 11, saying, "When the little hand points to 1 it is 1 o'clock. When the little hand points to 2 it is 2 o'clock. When the little hand points to 3 it is 3 o'clock," and so on.

6. Read these lines. Say the right numbers where the dots are:
   a. The little hand goes half way round the clock in...hours.
   b. The little hand goes quarter way round the clock in...hours.
   c. The little hand goes from 12 to 2, or one sixth of the way, in...hours.

7. Read the inside numbers up to 11, saying, "When the big hand points to 1, it is 5 minutes past. When the big hand points to 2, it is 10 minutes past. When the big hand points to 3, it is 15 minutes past," and so on.
1. Read this page. Say the right numbers where the
dots are:

a. The big hand goes half way round the clock in
....minutes or ....an hour.
b. The big hand goes one quarter the way round
the clock in....minutes or....of an hour.

c. It is....minutes past ....or 10:20
d. It is....minutes past ....or 10:25

e. It is....minutes past ....or 2:50. It will
be 3 o'clock in....
minutes. It is....
minutes of 3.
f. It is....minutes past ....or 4:40. It will
be 5 o'clock in....
minutes. It is....
minutes of 5.

2. What
time is it
by each
of these
clocks?
122. Telling Time

Draw a clock on the blackboard. 
Draw hands on the clock so that they show—
1. 10 minutes past 9, or 9:10.
2. 30 minutes past 9, or half past nine, or 9:30.
3. 45 minutes past 9, or 9:45, or 15 minutes of 10.
4. 55 minutes past 9, or 9:55, or 5 minutes of 10.
5. 20 minutes past 10, or 10:20.
6. 40 minutes past 10, or 10:40, or 20 minutes of 11.
7. 11:25.
8. 11:35.
9. 10 minutes of 12.
10. 2:15.
11. 2:50.
12. 5 minutes of 3.

To Be Done at Home

Look at a watch. Has it any hands besides the hour hand and the minute hand? Find out all that you can about how a watch tells seconds, how long a second is, and how many seconds make a minute.
How many hours does it take the hour hand to go—
1. From 6 in the morning to 11 in the morning?
2. From 6 in the morning to 3 in the afternoon?
3. From 8 in the morning to noon?
4. From 8 in the morning to 5 in the afternoon?
5. All the way round from 12 noon to 12 midnight?
6. From midnight to noon and then all around again to midnight? From midnight to noon and then again to midnight is 1 day. How many hours equal 1 day?
7. From midnight to 2 o’clock in the afternoon is how many hours?
8. From noon to 6 o’clock in the morning of the next day is how long?
9. On some railroads they call 1 o’clock in the afternoon 13 o’clock. They call 2 o’clock in the afternoon 14 o’clock, and so on to 23 o’clock. What do they call 5 o’clock in the afternoon? What do they call 9 o’clock in the evening?
10. On most railroads they call the hours from midnight to noon 1 A.M., 2 A.M., 3 A.M.; etc. They call the afternoon and evening hours from noon to midnight 1 P.M., 2 P.M., 3 P.M., etc. How long does it take the hour hand to go from 5 A.M. to 7 P.M.? From 9 A.M. to 4 P.M.? From 3 A.M. to 7 P.M.?
11. Read the right numbers where the dots are: From noon to midnight is . . . . hours. \( \frac{1}{3} \) of 12 hours = . . . . hours. \( \frac{1}{4} \) of 12 hours = . . . . hours. \( \frac{1}{6} \) of 12 hours = . . . . hours.
1. How many minutes does it take the minute hand to go from 2 to 3? From 2 to 4?
2. From 2 to 9? From 12 around to 12 again? From 12 to 1? From 12 to 2? From 12 to 8?
3. What part of an hour is 30 minutes? How many minutes make \( \frac{1}{6} \) hr. or one sixth of an hour? What part of an hour is 15 minutes? How many minutes are there in an hour and a half?
4. How many minutes are there in \( \frac{3}{4} \) hr. or three quarters of an hour? In half an hour?
5. At 10 minutes past 5, Dick's mother told him, "You must come in in a quarter of an hour." At what time must Dick come in?
6. Another day at 5 minutes past 4 she said, "You may stay just three quarters of an hour." At what time did he have to come in on that day?
7. Another day at quarter of five she said, "You must come in 25 minutes." At what time did he have to come?
8. It was quarter past 4. "You can play till 5 o'clock," said Will's mother. "How long is that?" asked Will. How long was it?
10. From 3:48 P.M. or 12 minutes of 4 P.M. to 4:09 P.M. or 9 minutes past 4? From 9:52 or 8 minutes of 10 to 10:07 or 7 minutes past 10?
11. How long is \( \frac{1}{4} \) hr. and \( \frac{1}{4} \) hr. in all?
12. How long is \( \frac{1}{4} \) hr. and \( \frac{1}{4} \) hr. in all?
126. Review

1. Supply the quotients and remainders:

<table>
<thead>
<tr>
<th>A.</th>
<th>B.</th>
<th>C.</th>
</tr>
</thead>
<tbody>
<tr>
<td>50 = ...6s and...r.</td>
<td>60 = ...6s.</td>
<td>6</td>
</tr>
<tr>
<td>50 = ...7s and...r.</td>
<td>60 = ...7s and...r.</td>
<td>7</td>
</tr>
<tr>
<td>50 = ...8s and...r.</td>
<td>60 = ...8s and...r.</td>
<td>8</td>
</tr>
<tr>
<td>50 = ...9s and...r.</td>
<td>60 = ...9s and...r.</td>
<td>9</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>D.</th>
<th>E.</th>
<th>F.</th>
<th>G.</th>
<th>H.</th>
<th>I.</th>
<th>J.</th>
</tr>
</thead>
<tbody>
<tr>
<td>5</td>
<td>45</td>
<td>6</td>
<td>35</td>
<td>6</td>
<td>55</td>
<td>6</td>
</tr>
<tr>
<td>6</td>
<td>45</td>
<td>7</td>
<td>35</td>
<td>7</td>
<td>55</td>
<td>7</td>
</tr>
<tr>
<td>7</td>
<td>45</td>
<td>8</td>
<td>35</td>
<td>8</td>
<td>55</td>
<td>8</td>
</tr>
<tr>
<td>8</td>
<td>45</td>
<td>9</td>
<td>35</td>
<td>9</td>
<td>55</td>
<td>9</td>
</tr>
</tbody>
</table>

Copy and write the quotients and remainders:

<table>
<thead>
<tr>
<th>2.</th>
<th>3.</th>
<th>4.</th>
<th>5.</th>
<th>6.</th>
<th>7.</th>
</tr>
</thead>
<tbody>
<tr>
<td>4</td>
<td>215</td>
<td>3</td>
<td>163</td>
<td>8</td>
<td>262</td>
</tr>
<tr>
<td>8.</td>
<td>9.</td>
<td>10.</td>
<td>11.</td>
<td>12.</td>
<td>13.</td>
</tr>
<tr>
<td>6</td>
<td>498</td>
<td>5</td>
<td>625</td>
<td>9</td>
<td>325</td>
</tr>
</tbody>
</table>

Write the products:

<table>
<thead>
<tr>
<th>14.</th>
<th>15.</th>
<th>16.</th>
<th>17.</th>
<th>18.</th>
<th>19.</th>
<th>20.</th>
</tr>
</thead>
<tbody>
<tr>
<td>$.84</td>
<td>$2.12</td>
<td>$2.54</td>
<td>$1.75</td>
<td>$1.50</td>
<td>$1.20</td>
<td>$.65</td>
</tr>
</tbody>
</table>

Write the quotients. If your work is all correct there will be no remainders in these:

<table>
<thead>
<tr>
<th>21.</th>
<th>22.</th>
<th>23.</th>
<th>24.</th>
<th>25.</th>
</tr>
</thead>
<tbody>
<tr>
<td>9</td>
<td>$7.47</td>
<td>7</td>
<td>$5.81</td>
<td>8</td>
</tr>
</tbody>
</table>

12. Write the sums for each of these twelve columns.
13. Tell what you must add to each of these numbers to make 15:

7 4 2 9 6 8 3 10 12 5 14

14. Tell what you must add to each of these numbers to make 20:

13 8 16 5 14 18 9 10 17 15 12

15. Find what you must add to $3.76 to make $4.25.
16. Which costs more, four dresses at 88 cents each or three dresses at $1.25 each? How much more?
Flour, 4 cents a pound.  Milk, 8 cents a quart.
Bread, 5 cents a loaf.  Salt, 9 cents a bag.
Sugar, 6 cents a pound.  Nabiscos, 10 cents a box.
Soap, 7 cents a cake.  Oranges, 30 cents a dozen.

At these prices find the amount of each of these purchases:
1. Two pounds of flour and a loaf of bread.
2. A quart of milk and a bag of salt.
3. Three boxes of nabiscos and a dozen oranges.
4. Half a dozen oranges.
5. A cake of soap and two quarts of milk.
6. A pint of milk.
7. Make up three problems for the other children to solve.
8. How many loaves of bread will 20 cents buy?
9. How many pounds of sugar will 12 cents buy?
10. You buy a dozen oranges and pay with a 50-cent piece.  How much change should you receive?
11. You buy two quarts of milk and pay with a 25-cent piece.  How much change should you receive?
12. Which costs more, 1 quart of milk and 2 pounds of flour or three loaves of bread?  How much more?
13. How much should you pay for a loaf of bread, a quart of milk, and a box of nabiscos?
14. How much milk should you get for 4 cents?
15. Nabiscos average 29 to a box.  How many nabiscos would there be in 10 boxes?
16. How many oranges are there in $\frac{1}{3}$ dozen?  In $\frac{1}{4}$ dozen?  In $\frac{1}{5}$ dozen?
Some clocks are made like this:

1. What number does V mean?
2. What number does X mean?
3. What numbers do these mean?
   VI, XI, IV, IX, III, VIII, II, XII.
4. What do you think XX will mean?
   XIV? XVI? XVIII?
   I, II, III, IV, V, VI, etc., are called Roman numerals.
   1, 2, 3, 4, 5, 6, etc., are called Arabic numerals
   or Hindu numerals.
5. Read these lines. Say the right numbers where the
dots are:
   IV means...less than 5. IX means...less than 10.
   V means... X means...
   VI means...and... XI means...and...
   VII means...and... XII means...and...
   VIII means...and... XIII means...and...
   XIV means 10 and 1 less than 5 (or...and 4).
   XV means...and...
6. Write in Roman numerals: 7, 12, 17, 5, 10, 15, 11.
7. Write in Arabic numerals: IV, XIV, XVI, VII.
8. XX means 20, XXX means 30. XIX means 19.
   XXI means 21. What do you think 36 is in
9. Say the Arabic numerals for these. See if you
can say them all correctly in a minute.
   V VII IV III X IX XI II VIII XIII
   XII VI XV VIII V XI X IV IX VII
   II XX XI IV IX XV XXX VI XII VIII

2. Tell the months of the year without looking at the calendar.

3. Which months have only 30 days?

4. Play that it is Dec. 10. In how many days will it be Christmas or Dec. 25?

   *Do not look at the calendar. Simply subtract 10 from 25.*

5. It is Nov. 4. In how many days will it be Thanksgiving, Nov. 25? What do you subtract from 25?

6. School closes June 30. Play that it is June 8 now. In how many days will school close?

   How long is it —

7. From Oct. 9 to Oct. 20? From Nov. 7 to Nov. 16?

8. From May 8 to May 14? From May 5 to May 23?

9. How many days is it from Jan. 2 to Jan. 23?

10. How many weeks is it?

11. How many weeks is it from July 3 to July 31?
<table>
<thead>

This time table tells the time a train leaves each station from New York to Croton. The first column tells the names of the stations. The second tells the time the train leaves each station. The third tells how many miles each station is from New York.

1. How many minutes does it take the train from the time it leaves New York to the time it leaves High Bridge?
2. How many minutes does it take the train from the time it leaves New York to the time it leaves Yonkers?
3. How many minutes does it take the train from the time it leaves New York to the time it leaves Tarrytown?
4. How many minutes does it take the train to go from Yonkers to Tarrytown?
5. From Yonkers to Scarborough?
6. From Tarrytown to Harmon? From Tarrytown to Ossining?
7. How many miles is it from New York to Yonkers?
8. How many miles is it from New York to Tarrytown?
9. How many miles is it from New York to Harmon?
10. How many miles is it from High Bridge to Yonkers?
11. How many miles is it from High Bridge to Ossining?
12. How many miles is it from Yonkers to Ossining?
This is a plan or map of a passenger car on a railroad train.

1. How many seats are there on one side?

2. On both sides together?

3. Each seat holds 2 passengers. How many passengers will all the seats hold?

4. How many passengers will the seats in a train of 6 such cars hold?

5. If all seats are full and 17 persons are standing, how many persons are in the car?

6. If the floor of this car is 8 feet wide and 48 feet long, what is its area in square feet?

7. Draw a plan or map of a schoolroom 28 feet long and 24 feet wide. Let one inch stand for 4 feet. Put in 42 desks, 2 ft. long and 1 ft. wide, in 6 rows. How many desks will there be in each row? If one inch stands for 4 ft., what part of an inch stands for 2 ft.? What part of an inch stands for 1 ft.?

8. What part of 12 is 6?

9. What part of 12 is 3?

10. What part of an hour is 30 minutes?

11. What part of an hour is 20 minutes?

12. What part of a foot is 4 inches?
This is a plan or map of a railroad. The little circles stand for stations. Each fourth of an inch stands for 1 mile.

1. What do the N., S., E., and W. stand for?

2. How many miles north of Station 21 is Station 22?

3. How many miles north of Station 23 is Station 24?

4. How many miles is it from Station 24 to Station 25 by the track?

5. Measure and see how many miles it would be from Station 24 to Station 25 in a straight line.

6. Read this. Say the right words where the dots are. A train going from Station 24 to Station 25 first goes 4 miles... then 3 miles....
The teacher asked the class to draw a map of a road or railroad and write a story telling about it.

Dick and Nell made this map of a Fairyland road, and wrote this story. Read the story, and find the right numbers where the dots are. Use your pencil when you need to. Remember that

\[ \_ \_ \_ \_ = 9 \text{ ft.} \]

\[ \_ \_ \_ \_ \_ = \text{two times 9 ft.} \]

\[ \_ \_ \_ \_ \_ = \text{three times 9 ft.} \]

A child starts with a drink at Lemonade Spring and walks...feet west to Cake Tree. He eats a cake and walks...ft. north to Apple Tree. He takes some apples and goes...ft. farther north to Candy Bush. After filling his pockets with candy he turns and goes...ft. east to Free Fireworks. Then he goes...ft. south to the Ice Cream Faucet. He eats some ice cream and goes...ft. farther south to Doll and Toy Garden. The fairy there says, "Tell me how far you have walked in all from Lemonade Spring and you may choose ten toys." So the child figures it out with pencil and paper and says, "I have come...ft." Then he takes the toys and goes out of the gate of Fairyland."
Take a large sheet of paper.
Draw a map of a road that goes north 63 miles, then east 54 miles, then south 81 miles, then west 72 miles.
Let 1 inch = 9 miles.
Write a story about it if you have time.
The map on page 108 is a map of part of a city. The shaded parts are the houses and stores and other buildings. The white parts are the streets and sidewalks. Boys and girls in this city measure distance by blocks. The distance east and west from one street to the next they call one long block. The distance north and south from one street to the next they call one short block.

One long block is 660 feet. One short block is 264 feet.

1. Alice lives at the corner of Madison Ave. and 17th St. (A). How many blocks is it from her house to the Lincoln School (L)?

2. How many feet is it from her house to the Lincoln School? 2376 ft. means twenty-three hundred seventy-six feet or two thousand three hundred seventy-six feet.

3. How many hundreds make one thousand?

4. 500 is what part of a thousand,—$\frac{1}{4}$, $\frac{1}{3}$, $\frac{1}{4}$, $\frac{1}{6}$, or $\frac{1}{8}$?

5. 250 is what part of 1000? Is it $\frac{1}{4}$ or $\frac{1}{8}$ or $\frac{1}{16}$ of 1000?

6. Bert lives at the corner of Madison Ave. and 15th St. (B). How many blocks is it from his house to the Lincoln School? How many feet is it?

7. When Bert goes to the High School (H) he will walk 7 short blocks south and then 1 long block east. How many feet will that be?

8. Charles lives at (C), the corner of Madison Ave. and 11th St. About how many feet must he walk to reach the Lincoln School?

9. To reach the High School?

10. To reach the corner of Adams Ave. and 16th St.?
137. Travel in the City

1. Dick's brother rides on his bicycle eight short blocks and then nine long blocks to go from his house to where he works. How many feet is that?

2. If he rides as fast as he can, he can go this distance in just 6 minutes. About how many feet does he go in a minute when he rides as fast as he can?

3. Usually he takes 9 minutes to go from his house to where he works. How many feet does he go in 9 minutes, when he goes 900 ft. a minute?

138.

1. Supply the missing numbers:

A. \(10 \times 4 = \)  B. \(100 \times 2 \text{ or } 2 \times 100 = \)  C. \(10 \times 2 = \)

\[ 10 \times 8 = \] \[ 100 \times 5 \text{ or } 5 \times 100 = \] \[ 100 \times 2 = \]

\[ 10 \times 6 = \] \[ 100 \times 7 \text{ or } 7 \times 100 = \] \[ 10 \times 7 = \]

\[ 10 \times 3 = \] \[ 100 \times 4 \text{ or } 4 \times 100 = \] \[ 100 \times 7 = \]

To multiply by 10, annex 0.
To multiply by 100, annex 00.

2. Read these numbers:  600  900  400  800

1100  1200  1300  1400  1800  1600

1900  1500  1700

3. Supply the missing products:

D.  E.  F.  G.

\[ 10 \times 5 = \] \[ 10 \times 16 = \] \[ 100 \times 15 = \] \[ 47 \] \[ 17 \] \[ 28 \]

\[ 100 \times 3 = \] \[ 10 \times 10 = \] \[ 100 \times 18 = \] \[ 10 \] \[ 100 \] \[ 100 \]

\[ 10 \times 9 = \] \[ 100 \times 8 = \] \[ 10 \times 20 = \] \[ 36 \] \[ 19 \] \[ 60 \]

\[ 100 \times 9 = \] \[ 100 \times 11 = \] \[ 10 \times 60 = \] \[ 10 \] \[ 100 \] \[ 100 \]

\[ 10 \times 12 = \] \[ 100 \times 12 = \] \[ 10 \times 50 = \] \[ 10 \] \[ 100 \] \[ 100 \]

\[ 10 \times 25 = \] \[ 10 \times 45 = \] \[ 100 \times 16 = \]
If you live in a city, draw a plan of the block your schoolhouse lot is on. Let each inch stand for 100 ft. What will \( \frac{1}{4} \) inch stand for?

If you live in the country draw a plan of your schoolhouse lot and of what is on the road within about 500 ft. of it. Let each inch stand for 100 ft.

140.

1. How many feet is half a long block? \( \frac{1}{4} \) of a long block? \( \frac{1}{6} \) of a long block?
2. How many feet are there in \( \frac{1}{6} \) of a short block?
3. How many feet are there in two short blocks?
4. In \( 2 \frac{1}{2} \) short blocks? (\( 2 \frac{1}{2} \) means two blocks and half a block more.)
5. In 10 short blocks? In 10 long blocks?
6. Edward has to walk 792 ft. from his gate to the schoolhouse door. Mary has to walk 910 ft. How much farther does Mary have to walk than Edward?
7. Edward goes about 2 ft. per step. About how many steps does he take to walk the 792 ft.?
8. It takes Mary 7 minutes to walk to school, hang up her coat and hat, and be in her seat ready for work. It takes Nell 13 minutes. It takes Grace 15 minutes. How late can Mary start for school and be in her seat ready for work at 8.55 A.M.?
9. How late can Nell start?
10. How late can Grace start?
112

141. How Alice Earned Money

Every year on Gala Day, Alice sells lemonade to the people who go down the street past her house. This year she plans to buy three dozen lemons at 20¢ a dozen, four pounds of sugar at 7¢ a pound, a piece of ice for 15¢, some straws for 5¢, and some white paper to cover the table for 2¢.

1. How much will all this cost?
2. How many glasses must she sell at 5¢ a glass to get back what these things cost?
3. If she sells 50 glasses at 5¢ a glass, how much profit will she make? That is, how much more money will she get than the materials cost?
4. How many glasses must she sell to make 90¢ gain or profit?

142. How Mary Earned Money

Mary earned money picking berries. She sold 7 quarts at 15¢ a quart, 18 quarts at two quarts for a quarter, and 23 quarts at 10¢ a quart.

1. How much did she receive for the 7 qt. sold at 15¢?
2. How much did she receive for the 18 qt. sold for 2 qt. for a quarter?
3. How much did she receive for the 23 qt. sold at 10¢ a qt.?
4. How much did she receive in all?
5. If she buys a new dress for $1.98 and a new hat for $1.89, how much money will she have left?
6. If Mary decides to save all the money toward a party dress that costs $7.50, how much more must she save to have enough to buy it?
143. Review

1. Add 296 to each of these numbers:
   231  509  625  474  382  528  189  398

2. Subtract 468 from each of these numbers:
   682  721  500  735  898  668  934  929

3. Multiply each of these numbers by 9:
   78  106  54  29  27  45  111  110

4. Multiply each of these numbers by 7:
   132  89  114  107  96  75  125  140

5. Multiply each of these numbers by 8:
   113  75  69  120  84  37  29  66

6. Find the quotients and remainders when you divide each of these numbers by 6. By 7. By 8. By 9:
   472  976  800  608  849  675  550  345

7. State the missing numbers:

   A.  
   B.  
   C.  
   D.  

   54 + 9 = 72 ÷ 8 = 8 × 9 = 7 × 7 =  
   54 − 9 = 72 + 8 = 56 ÷ 8 = ¾ of 12 =  
   54 ÷ 9 = 6 × 7 = 56 − 8 = 6 × 9 =  
   8 × 7 = ¾ of 12 = ½ of 12 = ¾ of 36 =  
   8 + 7 = ¾ of 16 = ½ of 20 = 64 − 8 =  
   8 − 7 = 9 × 9 = 81 − 9 = 64 + 8 =  
   6 × 8 = 4 × 7 = 81 ÷ 9 = 64 ÷ 8 =  
   10 × 4 = ¾ of 8 = ½ of 24 = 80 ÷ 8 =  
   90 ÷ 9 = ¾ of 18 = 10 × 8 = 10 × 6 =
144. Ounces, Pounds, and Tons

1. Lift the ounce weight. Lift the pound weight. Lift the weight that weighs 2 ounces or \( \frac{1}{8} \) of a pound (one eighth of a pound).

2. Name something that weighs about an ounce.

3. Name something that weighs about a pound.

4. Name something that weighs about ten pounds.

5. Name something that weighs about seventy-five pounds.

6. Name something that weighs about ten hundred or a thousand pounds.

7. 1 ton = 2000 pounds. Guess how many boys it would take to weigh a ton, if each boy weighed 100 pounds—10 or 20 or 30?

8. How many men would it take to weigh a ton if each man weighed 200 pounds—10 or 20 or 30?

   **16 ounces make one pound.**

   **2000 pounds equal 1 ton.**

9. What part of a pound = 4 ounces—\( \frac{1}{2} \) or \( \frac{1}{4} \) or \( \frac{1}{5} \) or \( \frac{1}{8} \) of a pound?

10. What part of a pound = 8 ounces—\( \frac{1}{2} \) or \( \frac{1}{4} \) or \( \frac{1}{5} \) or \( \frac{1}{8} \) of a pound?

11. What part of a pound = 2 ounces—\( \frac{1}{2} \) or \( \frac{1}{4} \) or \( \frac{1}{5} \) or \( \frac{1}{8} \) of a pound?

12. State the missing numbers: One eighth of a pound = 2 ounces. Three eighths of a pound = . . . . ounces. Seven eighths of a pound = . . . . ounces. One fourth of a pound = . . . . ounces. Three fourths of a pound = . . . . ounces.

13. How many inches = \( \frac{1}{4} \) ft.?

14. How many inches = \( \frac{1}{3} \) ft.?
1. Mr. Jones sells tea in little packages containing 2 ounces, or \( \frac{1}{6} \) of a pound, for 10¢ a package. What part of a pound would two little packages make? Four little packages? Six little packages?

2. How much does the tea cost per ounce (per ounce means for each ounce that you buy) when you buy two ounces for 10 cents?

3. If it costs 8 cents for half a pound of crackers, how much do they cost per ounce?

4. Tell the missing numbers:

   A. \( \frac{1}{2} \) of 12 = \( \frac{3}{4} \) of 12 = \( \frac{1}{4} \) of 12 = \( \frac{1}{6} \) of 16 =
   B. \( \frac{1}{2} \) of 10 = \( \frac{3}{4} \) of 9 = \( \frac{1}{4} \) of 24 = \( \frac{1}{6} \) of 48 =
   C. \( \frac{1}{2} \) of 16 = \( \frac{3}{4} \) of 21 = \( \frac{1}{4} \) of 16 = \( \frac{1}{6} \) of 24 =
   D. \( \frac{1}{2} \) of 8 = \( \frac{3}{4} \) of 15 = \( \frac{1}{4} \) of 32 = \( \frac{1}{6} \) of 56 =

5. Mr. Jones sells flour in 4-pound bags for 15¢ a bag and in 7-pound bags for 25¢ a bag. One day he sold 9 four-pound bags and eight 7-pound bags. How much money did he receive for all?

   We write lb. for pounds. 3 lb. means 3 pounds. 5 lb. means 5 pounds. 196 lb. means 196 pounds.

6. How many 4-lb. bags should he get from 196 lb. of flour?

7. How many 7-pound bags should he get from 196 lb. of flour, and how many pounds of flour are left over?

8. A barrel of flour contains 196 lb. flour. How much flour do 10 barrels contain?
1. Study this picture. Find the bulb. Find the top of the column of mercury.

2. Take a real thermometer. Put the bulb in some very cold water. Does the mercury go up or down? Take the thermometer out of the cold water and put the bulb near something very hot. What happens to the mercury?

3. Find out how hot it is in the sun to-day.

4. Find out how hot it is in the shade to-day.

5. What does "below zero" mean—"colder than zero" or "warmer than zero"?

6. On a certain day the mercury rose from 68 degrees at 6 A.M. to 82 degrees at noon. Did it grow hotter or colder from 6 A.M. to noon? How much?

7. On a certain day the mercury fell from 76 degrees at noon to 58 degrees at midnight. How much colder did it get from noon to midnight?

8. If the temperature of a schoolroom is 76 and ought to be 68, how much too hot is it?
147. Quarts, Pecks, and Bushels

8 quarts = 1 peck. 32 quarts = 1 bushel. 4 pecks = 1 bushel.

A box 10 inches long
10 inches wide
and 6\text{\textfrac{1}{2}} inches high
holds about 1 peck.

A box 10 inches long
10 inches wide
and 22 inches high
holds about one bushel.

1. Will your desk hold about a peck or about a bushel or about a quart?
2. About how much do you think the waste basket will hold?
3. How many pecks are there in half a bushel?
4. How many quarts are there in half a bushel?
5. How many quarts are there in half a peck?
6. How many quarts are there in three pecks?
7. How many quarts are there in a bushel and a half?
8. Mr. Jones bought a bushel of plums and filled small baskets each holding four quarts with them. How many baskets did he fill?
9. He sold them all for 15\text{\textcent} a basket. How much did he receive for them?
10. He bought a load of potatoes containing 8 bushels, for 60 cents per bushel. How much did he pay for the load?
One day John, who had just finished the third grade, was clerk in his father's store. In the forenoon he filled 20 orders, and figured out the amount of each order correctly. See if you can do as well.

This is a card his father gave him, telling some prices:

<table>
<thead>
<tr>
<th>Bananas, 20¢ a dozen.</th>
<th>Eggs, 36¢ a dozen.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Butter, 32¢ a lb.</td>
<td>Potatoes, 30¢ a peck.</td>
</tr>
<tr>
<td>Cheese, 24¢ a lb.</td>
<td>Sugar, 7¢ a lb. or</td>
</tr>
<tr>
<td>Coffee, 28¢ a lb. or</td>
<td>8 lb. for 50¢.</td>
</tr>
<tr>
<td>4 lb. for a dollar.</td>
<td>Tea, 60¢ a lb.</td>
</tr>
</tbody>
</table>

The first order was: A dozen bananas and half a pound of butter.

The second order was: Two pounds of sugar and a half dozen eggs.

The third order was: A dozen eggs and a peck of potatoes.

The fourth order was: Half a pound of cheese, half a pound of coffee, and a 10-cent loaf of bread.

The fifth order was: Half a peck of potatoes and half a pound of tea.

The sixth order was: A quarter of a pound of tea and a 10-cent loaf of bread.

The seventh order was: Three dozen eggs, two pounds of butter, and a peck of potatoes.

The eighth order was: Ten cents' worth of cheese, a 5-cent loaf of bread, and half a pound of coffee.
The ninth order was written: $\frac{1}{4}$ lb. tea and 1 lb. sugar.

The 10th order was: 3 bananas, 3 eggs, and a 5-cent loaf of bread.

The 11th order was: Four dozen eggs, two pecks of potatoes, a dollar's worth of sugar, and a pound of tea.

The 12th order was: Half a dozen bananas, a half peck of potatoes, and a 12¢ can of beans.

The 13th order was: A pound of butter, a pound of cheese, a pound of coffee, and two 10-cent loaves of bread.

The 14th order was: A dozen eggs, a quarter of a pound of tea, and a 15¢ box of starch.

The 15th order was: Half a pound of cheese, half a pound of coffee, and a pound of sugar.

The 16th order was: Two dozen bananas, four pounds of butter, three pounds of coffee, and a peck of potatoes.

The 17th order was: Two dozen eggs, 4 pounds of coffee, 8 pounds of sugar, and a pound of tea.

The 18th order was: A dozen and a half bananas, a peck of potatoes, and two 12¢ cans of beans.

The 19th order was: A pound and a half of cheese, a 5-cent box of matches, and a peck of potatoes.

The 20th order was: One half pound of butter, two pounds of sugar, and two 5-cent boxes of Uneeda biscuit.
Count

151.

3 9 5 7 2 6 8 1 4

1. Multiply each of these numbers by 6 and add 2 to the product.
2. Then multiply each of them by 7 and add 3 to the product.
3. Then multiply each of them by 8 and add 4 to the product.
4. Then multiply each of them by 9 and add 5 to the product.
5. Then multiply each of them by 5 and add 6 to the product.
6. Then multiply each of them by 4 and add 7 to the product.
7. Then multiply each of them by 3 and add 2 to the product.
152. **Review**

State the quotient and remainder for each of these divisions:

1. $3 \overline{25}$ $6 \overline{50}$ $4 \overline{30}$ $8 \overline{61}$ $7 \overline{50}$ $3 \overline{20}$ $3 \overline{22}$ $9 \overline{15}$
2. $7 \overline{61}$ $6 \overline{42}$ $9 \overline{62}$ $5 \overline{19}$ $3 \overline{21}$ $9 \overline{52}$ $9 \overline{57}$ $4 \overline{34}$
3. $9 \overline{73}$ $5 \overline{49}$ $6 \overline{16}$ $7 \overline{67}$ $4 \overline{22}$ $8 \overline{42}$ $7 \overline{60}$ $7 \overline{16}$
4. $5 \overline{42}$ $9 \overline{67}$ $8 \overline{67}$ $8 \overline{75}$ $9 \overline{42}$ $6 \overline{18}$ $5 \overline{18}$ $8 \overline{70}$
5. $6 \overline{40}$ $4 \overline{25}$ $6 \overline{49}$ $6 \overline{52}$ $8 \overline{45}$ $9 \overline{28}$ $7 \overline{49}$ $3 \overline{26}$
6. $5 \overline{16}$ $8 \overline{68}$ $9 \overline{40}$ $8 \overline{28}$ $7 \overline{68}$ $5 \overline{34}$ $8 \overline{57}$ $8 \overline{49}$
7. $9 \overline{68}$ $4 \overline{31}$ $6 \overline{55}$ $4 \overline{29}$ $5 \overline{31}$ $9 \overline{56}$ $6 \overline{20}$ $8 \overline{60}$
8. $5 \overline{46}$ $7 \overline{34}$ $8 \overline{26}$ $7 \overline{65}$ $9 \overline{25}$ $8 \overline{50}$ $7 \overline{52}$ $4 \overline{18}$
9. $8 \overline{77}$ $9 \overline{75}$ $9 \overline{50}$ $9 \overline{51}$ $4 \overline{21}$ $7 \overline{55}$ $6 \overline{31}$ $6 \overline{51}$
10. $8 \overline{15}$ $8 \overline{18}$ $6 \overline{34}$ $8 \overline{63}$ $9 \overline{69}$ $8 \overline{51}$ $4 \overline{39}$ $9 \overline{39}$

153.

Write the quotients and remainders:

1. $4 \overline{375}$
2. $6 \overline{500}$
3. $5 \overline{425}$
4. $8 \overline{144}$
5. $9 \overline{835}$
6. $9 \overline{150}$
7. $6 \overline{150}$
8. $7 \overline{650}$
9. $8 \overline{500}$
10. $3 \overline{225}$
11. $9 \overline{250}$
12. $7 \overline{455}$
13. $6 \overline{75}$
14. $8 \overline{175}$
15. $4 \overline{128}$

Write the products:

16. $1.03$
17. $1.45$
18. $2.18$
19. $1.36$
20. $1.89$

9 6 4 7 5
Supply the missing numbers:

A. 
1 qt. = . . . pt.
1 gal. = . . . qt.
1 ft. = . . . in.
1 yd. = . . . ft.
1 sq. yd. = . . . sq. ft.
1 week = . . . days.
1 day = . . . hr.
1 min. = . . . sec.
1 lb. = . . . ounces.

B. 
1. A rug 6 ft. wide and 9 ft. long covers . . . sq. ft.
2. A garden 6 yd. wide and 7 yd. long contains . . . sq. yd.
3. \( \frac{1}{2} \) hr. = . . . min. \( \frac{1}{6} \) hr. = . . . min.
4. \( \frac{1}{3} \) dozen = . . . . . \( \frac{1}{4} \) dozen = . . . . .
5. 7 quarts of milk at 8¢ a qt.
6. 5 boys bought a ball together for 25¢. Dividing the cost equally, each boy paid . . . .
7. Will has 42¢. How much more must he get to have enough to buy a 50¢ saw?

C.
1. A train goes 90 miles in 3 hours. It goes . . . miles per hour.
2. Nell paid 14 cents for 2 pounds of sugar. The sugar cost . . . .¢ per pound.
3. Tom bought a ball for 5¢, a bat for 10¢, and a glove for 25¢. The total cost for all was . . . .¢.
4. 6 is what part of a dozen? 3 inches is what part of a foot? 1 foot is what part of a yard?
5. \( \frac{1}{4} \) hr. = . . . minutes. \( \frac{1}{6} \) hr. = . . . minutes.
Find the sums. You need not copy the numbers. Lay a sheet of paper over this page. Write the sums for Row A on the top line of the sheet of paper. Then make a one-inch fold in the sheet of paper and write the sums for Row B.

<table>
<thead>
<tr>
<th>Row A</th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>

ARITHMETIC
BOOK ONE, PART TWO

1. Vacation Activities

Each child gave the class a problem to solve about something he did in vacation. Some children added other problems. Can you solve them all correctly?

(Write any numbers you need to write to find the answers.)

1. Mary gave this one: "I went to my uncle's farm. I went 296 miles by boat, 56 miles by train, and 9 miles by carriage. What was the total distance?"

2. Nell said, "I went on an automobile trip for six days. We rode 498 miles. How much was that per day?"

3. Joe said, "I earned $1.50 a week for eight weeks by working on a grocery wagon. How much did I earn in all?"

4. Tom said, "I earned twelve dollars but I worked only six weeks. How much did I earn per week?"

5. Alice said, "I had a garden 8 ft. long and 8 ft. wide. How many square feet were there in it?"

6. Grace said, "I had a garden that must have been five times as big as Alice's, I think. It was 20 ft. wide and 32 ft. long. How many square feet were there in my garden?"

7. Lucy said, "Was Grace's garden really 5 times as big as Alice's? I think it was 10 times as big. Is Grace right or am I right?"

125
8. Maud said, "I raised sweet peas in my garden and sold them for 25¢ a bunch. How many bunches did I have to sell to make a dollar?"

9. Kate said, "If Maud put 50 sweet peas in each bunch, how many sweet peas did she have to sell to get a dollar?"

10. Dick said, "Eight of us boys bought a tent together. It cost $12.32 for the tent and parcel postage on it. How much did I have to pay?"

11. Will said, "I bought a bicycle for $12.00 and used it for nine weeks and then sold it for $9.75. How much did it cost me to have the bicycle for the nine weeks?"

12. John said, "How much did it cost Will per week for the use of his bicycle?"

13. Tom said, "I rode 18 miles one day in 3 hours. How many miles did I go per hour?"

14. George said, "My brother went 72 miles in 3 hours on a motorcycle. How many miles per hour was that?"

15. Fred said, "We counted how many automobiles went past our house in ten minutes, and one day there were fifty. How many would that be per minute?"

16. Fred's brother said, "One day when we counted there were just 23 every ten minutes from 5 o'clock to 6. How many went by in the whole hour?"

17. Henry said, "How many persons will 7 cars seat if each car has 9 seats, holding 5 persons each?"
2. Review

1. 2 6 3 9 7 5 8 1 4

Multiply each of these numbers by 7. Then by 4. By 8. By 5. By 9, 6, 3, 10.

2. 30 41 53 60 55 25 35 40 21

Divide each of these numbers by 6. Then by 8. By 9, 4, 7, 5. Tell the quotient and the remainder.

3. 15 11 18 13 16 14 17 12 19 25

Subtract 9 from each of these numbers. Then subtract 7. Then subtract 5, 3, 8, 6, 4.

4. Add each column:

\[
\begin{array}{cccccccccccc}
4 & 8 & 5 & 7 & 6 & 9 & 5 & 8 & 7 & 9 & 4 & 9 \\
9 & 7 & 7 & 8 & 9 & 5 & 7 & 9 & 6 & 6 & 9 & 7 \\
8 & 7 & 9 & 5 & 3 & 6 & 8 & 2 & 4 & 7 & 9 & 4 \\
\end{array}
\]

5. Tell the missing numbers:

<table>
<thead>
<tr>
<th>A.</th>
<th>B.</th>
<th>C.</th>
<th>D.</th>
</tr>
</thead>
<tbody>
<tr>
<td>9 + 3 =</td>
<td>20 ÷ 5 =</td>
<td>10 + 2 =</td>
<td>5 ÷ 5 =</td>
</tr>
<tr>
<td>9 - 3 =</td>
<td>20 × 5 =</td>
<td>10 × 2 =</td>
<td>5 - 5 =</td>
</tr>
<tr>
<td>9 ÷ 3 =</td>
<td>20 - 5 =</td>
<td>10 - 2 =</td>
<td>5 ÷ 5 =</td>
</tr>
</tbody>
</table>

6. Say the division tables. Say them like this:

\(\frac{1}{2}\) of 2 = 1, \(\frac{1}{2}\) of 4 = 2, \(\frac{1}{2}\) of 6 = 3, \(\frac{1}{2}\) of 8 = 4, etc.

\(\frac{1}{3}\) of 3 = 1, \(\frac{1}{3}\) of 6 = 2, \(\frac{1}{3}\) of 9 = 3, \(\frac{1}{3}\) of 12 = 4, etc.

\(\frac{1}{4}\) of 4 = 1, \(\frac{1}{4}\) of 8 = 2, \(\frac{1}{4}\) of 12 = 3, \(\frac{1}{4}\) of 16 = 4, etc.

\(\frac{1}{5}\) of 5 = 1, \(\frac{1}{5}\) of 10 = 2, etc.

\(\frac{1}{6}\) of 6 = 1, \(\frac{1}{6}\) of 12 = 2, etc.
3. Testing Results

1. Add 75
   219
   324
   197
   148
   Check your result by adding downward.
   Then check your result by adding
   1, 1, 3, and 2 and writing 700 for 7 hundreds
   Then add 4, 9, 2, 1, and 7
   and write 230 for 23 tens
   Then add 8, 7, 4, 9, and 5
   and write
   Then add the 700, 230, and 33.

Find the sums. Check your results by adding downward. Then check them by adding the hundreds, the tens, and the ones, and adding the three numbers.

<table>
<thead>
<tr>
<th>2.</th>
<th>3.</th>
<th>4.</th>
<th>5.</th>
<th>6.</th>
<th>7.</th>
<th>8.</th>
</tr>
</thead>
<tbody>
<tr>
<td>252</td>
<td>186</td>
<td>129</td>
<td>170</td>
<td>187</td>
<td>120</td>
<td>194</td>
</tr>
<tr>
<td>120</td>
<td>143</td>
<td>315</td>
<td>175</td>
<td>235</td>
<td>76</td>
<td>140</td>
</tr>
<tr>
<td>95</td>
<td>173</td>
<td>144</td>
<td>66</td>
<td>84</td>
<td>89</td>
<td>65</td>
</tr>
<tr>
<td>416</td>
<td>258</td>
<td>239</td>
<td>159</td>
<td>197</td>
<td>246</td>
<td>238</td>
</tr>
<tr>
<td>147</td>
<td>137</td>
<td>168</td>
<td>128</td>
<td>275</td>
<td>294</td>
<td>257</td>
</tr>
</tbody>
</table>

Subtract to find the differences. Check your results by adding the difference to the smaller number.

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>1275</td>
<td>1000</td>
<td>144</td>
<td>360</td>
<td>1225</td>
<td>309</td>
<td>1680</td>
</tr>
<tr>
<td>918</td>
<td>698</td>
<td>75</td>
<td>160</td>
<td>850</td>
<td>175</td>
<td>425</td>
</tr>
</tbody>
</table>

Find the products:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>128</td>
<td>193</td>
<td>137</td>
<td>309</td>
<td>275</td>
<td>108</td>
<td>120</td>
</tr>
<tr>
<td>6</td>
<td>5</td>
<td>7</td>
<td>3</td>
<td>4</td>
<td>9</td>
<td>8</td>
</tr>
</tbody>
</table>

32. Check your result for 16.

Do this by thinking 6 × 8 and writing 48
6 × 20 and writing 120
6 × 100 and writing 600
Then add.

24. Check your results for 17, 18, 19, 20, 21, and 22.
4. **Multiplying and Dividing**

1. Multiply. Say the product of each pair of numbers.

A. 7 6  B. 9 8  C. 8 7  D. 6 4  E. 7 4
   4 8  8 6  6 8  9 5  8 9
   9 7  6 7  7 9  4 9  6 5
   6 9  7 8  6 6  7 7  9 9
   8 5  9 6  8 4  8 8  4 7

2. Divide. Give as many quotients and remainders as you can in two minutes. Then try again. See if you can beat your record.

A. 3 | 25  4 | 25  6 | 25  9 | 25  7 | 25  9 | 60  8 | 60  7 | 60
B. 6 | 50  7 | 50  8 | 50  9 | 50  6 | 40  7 | 40  8 | 70  9 | 70
C. 9 | 75  8 | 45  4 | 35  9 | 35  4 | 30  6 | 30  7 | 30  9 | 80

5.

Find the quotients and remainders:

1. 2. 3. 4. 5. 6.

4 | 125  8 | 375  3 | 1150  6 | 1275  9 | 1400  5 | 1275
7. 8. 9. 10. 11. 12.

7 | 1850  5 | 875  6 | 3120  4 | 491  8 | 2495  2 | 1635

13.

4 | 825  Think "8 = ... 4s." Write 2 over the 8.
2 = zero 4s and 2 remainder. Write 0 over the 2.
25 = ... 4s and ... remainder.

14.

4 | 1632  Think "16 = ... 4s." Write ... over the 6 of 1632.
3 = 0 4s and ... remainder. Write 0 over the 3.
32 = ... 4s.

15. 16. 17. 18. 19. 20.

8 | 3225  7 | 2116  3 | 917  3 | 1518  5 | 2532  5 | 516

Check your answers to 15, 16, 17, 18, 19, and 20.
6. Large Numbers

Sometimes you have to use large numbers like 5274 or 9863 or 4250. We read 5274, five thousand two hundred seventy-four.

1. Read 9863, ...thousand ...hundred .... ....

2. How do you read 4250?

You will know what these large numbers mean if you remember that it takes 1296 square inches of cloth to cover a table 3 feet long and 3 feet wide.

There are 1760 yards or 5280 feet in a mile.

If you save a cent a day for ten years you will save about thirty-six hundred (3600) cents.

A horse weighs two or three thousand times as much as this book.

Twenty-five dollars equal 2500 cents.

Say the right words or numbers where the dots are:

3. $20 = ...cents. $45 = ...cents. $32 = ...cents.
   $17.50 = ...cents. $12.05 = ...cents.
   $50 = ...cents. $90 = ...cents.

4. 2800 cents = ...dollars. 2500 cents = ...dollars.
   1075 cents = ...dollars and ... cents.
   3520 cents = ...dollars and...cents.

5. Read these numbers:
   
   

5274   9863   4250   3572   6124
   6166   6666   5062   5000   5008
   2075   3208   4005   6274   3838

6. State the products: 500 2000 800 2222
   9 4 7 3

7. State the quotients: 7|630 3|6000 4|816
Find the sums:

<p>| | | | | | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>7000</td>
<td>7</td>
<td>6</td>
<td>6000</td>

</tr>
</tbody>
</table>

Write in figures:

1. Seven thousand six hundred eighty-four.
2. Five thousand three hundred seventy-two.
3. Nine thousand seven hundred forty-five.
4. Six thousand five hundred seventy.
5. Seven thousand thirty-six.
6. Four thousand nine hundred six.
7. Eight thousand two hundred four.
8. Six thousand three hundred twenty.
9. Eight thousand sixty-seven.
10. Two thousand six hundred nine.
11. Seven thousand.
12. Seven thousand four hundred.
13. Seven thousand four hundred thirty.
14. Seven thousand four hundred thirty-two.
15. Three thousand six.
16. Three thousand sixty.
17. Five thousand six hundred.

</tr>
</tbody>
</table>

24. Add 293, 2681, 475, 93 and 4120.
9. School Supplies

The Second Grade, Rooms A, B, and C, had these supplies:

3 boxes of pencils, 144 pencils in a box.
6 boxes of chalk, 144 pieces in a box.
3 big boxes of inch cubes, 1728 cubes in a box.
5 boxes of play money, 250 pennies in a box.
72 pads of paper, 96 sheets in a pad.

1. How many pencils did they have in all?
2. How many pieces of chalk did they have in all?
3. How many inch cubes did they have in all?
4. How many play pennies did they have in all?
5. How many sheets of paper did they have in all?

Here is a quick way to find out:

\[
\begin{align*}
96 & \quad \text{Think "2 6s = 12." Write the 2 under the 2 of 72 in the ones column.} \\
& \quad \text{Remember the 1.} \\
192 & \quad \text{Think "2 9s = 18. 18 and 1 = 19." Write the 19.} \\
672 & \quad \text{Think "7 6s = 42." Write the 2 under the 7 of 72 in the tens column.} \\
6912 & \quad \text{Remember the 4.} \\
& \quad \text{Think "7 9s = 63. 63 and 4 = 67." Write the 67.} \\
& \quad \text{Add. Remember that the 672 counts as 6720 in adding.}
\end{align*}
\]

6. For the whole school, the principal bought 54 boxes of chalk, 144 pieces in a box. How many pieces of chalk did he buy for the whole school?

\[
\begin{align*}
144 & \quad \text{Remember that—} \\
54 & \quad \text{First you multiply 144 by 4.} \\
576 & \quad \text{Then you multiply 144 by 5.} \\
720 & \quad \text{You write the 0 of 20 under the 5 by which you are multiplying.} \\
7776 & \quad \text{The 720 counts as 7200 in adding.}
\end{align*}
\]

7. How many pieces of cloth are there in 23 boxes, if each box contains 144 pieces?
1. Guess how many little squares there are in all in this picture. Then find out just how many there are by multiplying 115 by 85.

2. What was the difference between your guess and the right answer?

3. Guess how many square inches there are in 1 sq. yd.
Then find out how many there are by multiplying 36 by 36.

4. How near did you guess?

5. Guess how many half pints or glassfuls of water there are in a big barrel that holds 42 gallons. Then find out just how many there are by multiplying. 1 gallon equals 4 qt. or 16 half pints.

6. Guess how many square inches there are in a blanket 84 inches long and 72 inches wide. Then find the right number by multiplying.

7. Nell's garden is 57 feet long and 23 feet wide. How many square feet does it contain?

8. Alice's garden is 43 feet long and 32 feet wide. How many square feet does it contain?

11.

12. Dollars and Cents in a Product

1. The Malden Midgets’ baseball team has 9 regular players and 4 substitutes. How much will it cost for suits for all at $1.75 each?

Put $ before the product to show that the numbers mean dollars and cents. Put a decimal point in the product to show which numbers mean dollars and which mean cents.

2. The Girls’ Club has 37 members. Each gave $.75 to help buy an organ for the church. How much did they give in all?

14. Playing "How Far"

The children play "How far."

It is Dick’s turn. Dick says, "I am a railroad train. I go 35 miles an hour for 9 hours. How far do I go?" Then he goes to the blackboard and writes the numbers and the answer. The other children begin work as soon as Dick states the problem, and try to find the right answer before Dick does.

It is Alice’s turn. Alice says, "I am an automobile. I go 18 miles an hour for 6 hours. How far do I go?" Then she goes to the blackboard and finds the answer. The other children try to find the answer to Alice’s problem before she does.

Make up problems so that you can play this game. Practice with these so that you can find the right answers quickly:

1. 17 mi. per hr. for 3 hours.
2. 32 mi. per hr. for 9 hr.
3. 47 mi. per hr. for 8 hr.
4. 225 mi. per day for 22 days.
5. 56 mi. per hr. for half an hour.

15. Playing "Saving"

The children played "Saving." One girl said, "I am saving for a sweater. It will cost $3.98. I have $2.65 now. How much more must I save?" Then she went to the blackboard and wrote the numbers and the answer. The other children tried to get the right answer before she did.

Make up problems for this game. Your teacher will let you play it.
16. Playing "And"

A child states a problem like, "23 pints equal how many quarts and how many pints?" Then he goes to the blackboard and writes it, putting in the right numbers instead of the two "how many's." The other children try to find the right answer before he does. Practice with these problems so that you can play the game well. Look at the tables at the bottom of the page when you need to.

1. 25 pt. = . qt. and . pt.  
2. 19 qt. = . gal. and . qt.  
3. 29 ft. = . yd. and . ft.  
4. 20 in. = . ft. and . in.  
5. 9 gills = . pt. and . gills.  
6. 35 qt. = . pk. and . qt.  
7. 20 da. = . wk. and . da.  
8. 25 qt. = . gal. and . qt.  
9. 100 sec. = . min. and . sec.  
10. 15 pt. = . qt. and . pt.  
13. 50 qt. = . pk. and . qt.  
14. 50 pk. = . bu. and . pk.  
15. 200 min. = . hr. and . min.  
16. 30 da. = . wk. and . da.

Learn these tables. They will help you to play the game well.

4 gills = 1 pint.  
2 pints = 1 quart.  
4 quarts = 1 gallon.  
8 pints = 1 gallon.  
8 quarts = 1 peck.  
4 pecks = 1 bushel.  
60 seconds = 1 minute.  
60 minutes = 1 hour.  
24 hours = 1 day.  
7 days = 1 week.

pt. means pint or pints.  
qt. means quart or quarts.  
gal. means gallon or gallons.  
pk. means peck or pecks.  
bu. means bushel or bushels.  
min. means minute or minutes.  
sec. means second or seconds.  
hr. means hour or hours.  
da. means day or days.  
wk. means week or weeks.
1. Learn what these words mean:

128, 146, and 117 are the **addends**, or numbers to be added.

391 is the **sum**. The operation is **addition**.

4720 is the **minuend**.

1285 is the **subtrahend**.

3435 is the **difference**. The operation is **subtraction**.

524 is the **multiplicand**, or number to be multiplied. 6 is the **multiplier**.

3144 is the **product**. The operation is **multiplication**.

9|1638 1638 is the **dividend**, or number to be divided.

9 is the **divisor**.

182 is the **quotient**. The operation is **division**.

2. + means **“plus.”** It indicates the operation of adding.

– means **“minus.”** What operation does it indicate?

What operation does × indicate?

What operation does ÷ indicate?

Perform the operations indicated, and write the results:

3. 4. 5. 6.
23 × 28 1346 ÷ 2 3875 − 2490 1613 + 2143 + 1278

7. 8. 9. 10.
613 − 245 43 × 54 81 + 93 + 75 852 ÷ 3
1. It costs 25¢ to send a telegram of 10 words from New York to Philadelphia in the daytime. It costs 2¢ a word for each word over 10. What does it cost for a telegram of 16 words?

These are the rates for a telegram from New York to other cities:

<table>
<thead>
<tr>
<th></th>
<th>For Ten Words</th>
<th>For Each Word Over Ten</th>
</tr>
</thead>
<tbody>
<tr>
<td>New York to Chicago</td>
<td>50¢</td>
<td>3¢</td>
</tr>
<tr>
<td>New York to St. Louis</td>
<td>50¢</td>
<td>3¢</td>
</tr>
<tr>
<td>New York to Denver</td>
<td>75¢</td>
<td>5¢</td>
</tr>
<tr>
<td>New York to San Francisco</td>
<td>$1.10</td>
<td>7¢</td>
</tr>
</tbody>
</table>

Find the cost of each of these telegrams sent from New York:

2. A 17-word telegram to Chicago.
3. A 20-word telegram to St. Louis.
4. A 15-word telegram to Denver.
5. A 16-word telegram to San Francisco.
6. A 19-word telegram to Chicago.
7. A 25-word telegram to San Francisco.
8. How much do you save in sending telegram A instead of telegram B from New York to San Francisco?

B. Arrive on Saturday the fourth. My health is very good. Pay no attention to telegrams sent before this. See if you can get Jones to meet me.

9. Write a telegram. Tell from what place it is sent and to what place it goes. Find the cost.
The express rates from Chicago to San Francisco are:
For a package weighing 5 lb., it costs $.65.
For a package weighing 10 lb., it costs $1.11.
For a package weighing 20 lb., it costs $2.02.
For a package weighing 25 lb., it costs $2.47.
For a package weighing 100 lb., it costs $9.30.

10. How much less does it cost to send 100 pounds in one package than to send four 25-pound packages?
11. Than to send five 20-pound packages?
12. Than to send ten 10-pound packages?
13. Than to send twenty packages of 5 pounds each?
14. You can send 100 pounds from Chicago to San Francisco by freight for $3.40. How much less is that than the express rate?
15. Does it cost four times as much to send 20 lbs. by express as it costs to send 5 lbs.?

19. Playing "Cashier"

Play that you are a cashier in a store. The customer hands you the money and a slip of paper telling the amount of his purchase. You count out the pennies, nickels, dimes, quarters, half dollars, etc., that make the right change. Make yourself 10 one-dollar bills, $5 worth of 50-cent pieces and quarters, $2 worth of dimes and nickels, and 10 pennies. Suppose the slip said 19¢ and the customer gave you a dollar bill; you could count out 1¢ and think 20, a nickel and think 25, a 25-cent piece and think 50, and a half dollar and think 1 dollar.

1. Make change for 17¢ from a dollar.
2. Make change for 64¢ from a dollar.
Tell what coins you would give as change for each of these purchases:

4. 3¢ from a dime.
5. 11¢ from two dimes.
6. 28¢ from three dimes.
7. 28¢ from a half dollar.
8. 9¢ from a 25¢ piece.
9. 57¢ from 75 cents.
10. 63¢ from a dollar.
11. 89¢ from a dollar.
12. 98¢ from a two-dollar bill.
13. 75¢ from a five-dollar bill.
14. 49¢ from a two-dollar bill.
15. 16¢ from a half dollar.
16. 13¢ from a dollar.
17. 35¢ from a half dollar.
18. 27¢ from a dollar.
19. 44¢ from a two-dollar bill.
20. $1.69 from a five-dollar bill.
21. 8¢ from a half dollar.

22. In what different ways could you make change for 12¢ from a dollar?

23. Play that a man does not buy anything, but just wants change for a bill. He gives you a two-dollar bill and says, “Please give me this in quarters” (25-cent pieces). How many should you give him?

24. He gives you a two-dollar bill and says, “Please give me half of this in dimes and half in nickels.” How many dimes should you give him? How many nickels? (A nickel = 5 cents.)

25. He gives you a five-dollar bill and says, “Please give me this in dimes.” How many dimes should you give him?

26. How many nickels should you give for a five-dollar bill?

27. How many half-dollars should you give for a two-dollar bill?

28. How many half-dollars should you give for a five-dollar bill?
Frank's father and mother wish to build a new house. Here is the drawing they made to show the builder about what they want. Each inch stands for 8 feet.

1. Look at the dimension lines (←9 ft.→ is a dimension line) and numbers on the south side of the house. How long is the south side of the house?
2. Look at the dimension lines at the east side of the house. How long is the east end of the big
bedroom? How long is the east end of the
bathroom? How long is the east end of the
small bedroom? How long is the east side of
the house?
3. What are the dimensions of the whole house?
4. How many square feet of floor space has it?
5. How many square feet of floor space has the living-
room? The kitchen? The pantry? The big
bedroom on the east side? The small bedroom
on the east side? The bathroom?
6. Draw a floor plan of a house such as you would
like to have. Put in lines and numbers to show
the dimensions of each room. Let each inch
stand for 8 feet. What will \( \frac{1}{2} \) inch stand for?
What will \( \frac{1}{4} \) inch stand for? What will \( \frac{1}{8} \) inch
stand for?
7. Find out how many square feet of floor space each
room in your house will have.
8. Dick wants a room 8 ft. wide with 80 square feet
of floor space. How long will it be?
9. Mary wants a closet with 12 square feet of floor
space. What dimensions may it have?

21. Drawing to Scale

1. Which of these angles are right angles?

2. Which are equal to about half a right angle?
3. Which are equal to about a right angle and a half?
4. A rectangle has four sides and four right angles as its corners. Which of these are rectangles?

5. Draw a rectangle 2 in. long and 1 in. wide. Call it A. Draw a rectangle 2 in. long and 2 in. wide. Call it B. Draw a rectangle 2 in. long and \( \frac{1}{2} \) in. wide. Call it C. Draw a rectangle 4 in. long and \( \frac{1}{2} \) in. wide. Call it D. Draw a rectangle 1 in. long and \( \frac{1}{2} \) in. wide. Call it E.

6. Tell how many sq. in. each rectangle contains.

7. How many square inches are there in a page 8 in. by 7 in.? (8 in. by 7 in. means a rectangle 8 in. long and 7 in. wide.)

8. Tell how many square inches there are in a picture that is 4 in. by 5 in. In one that is 5 in. by 8 in. In one that is 6 in. by 9 in.

9. How many square feet are there in a rug that is 4 ft. by 2 ft.?

10. In a rug that is 7 ft. by 9 ft.?

11. How many square yards are there in a rug that is 4 yd. by 3 yd.?

12. Lee Park is a rectangle 2 miles long and \( \frac{1}{2} \) mile wide. How many square miles does it contain? Draw a plan of it, letting 1 inch stand for 1 mile.

13. Find out what you can about how long a rod is, how big a square rod is, and how big an acre is. To-morrow you may tell what you have found out.
22. Rods, Square Rods, and Acres

1. Tell what you found out about rods and square rods.
2. Tell what you found out about acres.
3. Which of these would you measure in sq. in.? Which would you measure in sq. ft. or sq. yd.? Which would you measure in sq. rd. or acres? Which would you measure in sq. miles?

1 acre equals 43,560 sq. ft.

4. How many sq. ft. are there in one half of an acre?
5. In \( \frac{1}{4} \) acre (one fourth of an acre)? In \( \frac{1}{3} \) acre?
6. Divide an acre into five equal parts. How many square feet will there be in each fifth (\( \frac{1}{5} \)) of an acre?
7. Divide an acre into eight equal parts. How many sq. ft. are there in each eighth (\( \frac{1}{8} \)) of an acre?

1 acre equals 160 square rods (sq. rd.).

8. How many square rods are there in \( \frac{1}{2} \) acre?
9. In \( \frac{1}{4} \) acre? 10. In \( \frac{1}{8} \) acre? 11. In 2 acres?
12. In 4 acres? 13. In 10 acres?
14. Which is larger, a field 28 rods by 15 rods, or a field 22 rods by 20 rods?

1 square mile = 640 acres.

15. How many acres are there in a town that is 6 miles long and 6 miles wide?
16. How many acres are there in \( \frac{1}{4} \) sq. mi.?
17. Is the area of a park that contains 325 acres about \( \frac{1}{4} \) sq. mi. or about \( \frac{1}{2} \) sq. mi. or about 2 sq. mi.?
23. Problems

1. Which is larger, a rug 6 by 9 ft., or a rug 8 by 7 ft.? How much larger?

2. Which is larger, a forest of 10 square miles or a forest of 6500 acres? How much larger?

3. Which is larger, a room 12 by 18 ft. or a room 15 by 16 ft.? How much larger?

4. A mile is 5280 feet long. How many feet long is a quarter of a mile?

5. Which is longer, a quarter of a mile or 500 yd.? How much longer?

6. How many yards make a mile?

7. Which is longer, four hours or four hundred minutes? How much longer?

8. If a boy walks for an hour at the rate of 96 yards a minute, how far will he go?

9. Which is longer, an hour and a half or 100 minutes?

10. Which goes the longer distance, a train going 32 miles an hour for 5 hours, or a train going 38 miles an hour for 4 hours? How much longer?

11. The 4th grade has a space 28 ft. by 16 ft. for a garden. How many square feet does it contain?

12. 128 sq. ft. are used for paths. How much is left for plots for the children?

13. If each plot is 2 ft. by 4 ft., how many plots will there be?

14. Each child in the 5th grade has a plot 3 ft. by 4 ft. There are 32 children. How many square feet do the 5th grade children have in all?

15. Which is longer, an hour and a quarter or 80 min.?
Henry's big brother Frank goes to high school. This picture shows his school program.

1. School begins at 9 A.M. and closes at 2 P.M. How many hours long is his school day? 2. How many minutes are there in his school day? 3. When does the first period begin? 4. The second period? 5. How many minutes are spent in recitation and study periods? 6. How much time is spent in opening exercises and 5-minute intermissions? 7. How much time is left for recess? 8. Henry requires 25 minutes to get from his house to the school. How late can he leave the house and still not be late to school? 9. School is in session daily except Saturdays and Sundays. How many recitation and study periods are there in a week? 10. Each week Frank spends 5 periods in the English class, 5 periods in the Algebra class, 5 in the History class, 5 in the Biology class, and 1 in the Drawing class. How many periods a week has he left for study by himself in school?
1. Find out what the school program is for your class and draw a plan of it. Let a width of \( \frac{3}{8} \) inch stand for 10 min.

2. Make up three problems for the class to solve about your school program. Make one that is easy, one that is harder, and one that is very hard.

26.

1. Draw a rectangle that is 6 inches long and 1 inch wide. Use it to make a plan of the time from 6 A.M. to noon for a girl who got up at 6 A.M., was dressed by 6:15, helped mother till 7, had breakfast till 7:30, studied for an hour, started for school, reached school at 9, stayed in school 3 hours.

2. Make two easy problems and two hard problems for the class to solve about this girl.

3. Make five problems for the class to solve about how she spent the time from noon to bedtime.

27.

1. How many weeks must school keep in a year to have 180 school days?

2. If there are 180 school days, how many days are left out of the year with no school?

3. In September, 1915, Kate had been to school for six years. In what year did she begin school?

4. The Lincoln School was built in 1897. How long ago was that?
28. Testing Results: Problems

1. Find the product of 213. Check your result by multiplying 213 by 42.
   \[
   \begin{array}{c}
   42 \\
   \hline
   213 \\
   \hline
   126 \\
   42 \\
   \hline
   84 \\
   \hline
   8946
   \end{array}
   \]

3. Find the products. Check each answer by multiplying.
   \[
   \begin{array}{cccccccc}
   a. & b. & c. & d. & e. & f. & g. \\
   312 & 428 & 248 & 96 & 189 & 398 & 72 \\
   28 & 19 & 24 & 65 & 49 & 18 & 66
   \end{array}
   \]

4. 623 children went on Mrs. Straus' excursion. Mrs. Straus paid $0.69 for the round-trip fare for each child. How much did she pay in all? You may multiply 69 by 623 or multiply 623 by 69. \textit{But be sure to put $ and . in the right places in your result.}

5. 297 persons paid 15 cents each to come to the school entertainment. How much did they pay in all? Multiply 15 by 297 or 297 by 15, but be sure to put $ and . in the right places in your result.

6. The children in the Adams School gave 20 cents apiece to help buy swings, teeter-boards, and other things for the playground. There were 488 children. How much did they give in all?

7. The total cost for the things for the playground was $110. How much more was needed than the children gave?
Sometimes you need to use very large numbers like 10,736 sq. ft., or like forty thousand or a million. $450 is 45,000¢ (forty-five thousand cents). The wall of one side of your schoolroom contains about thirty thousand square inches (30,000 sq. in.). There are 86,400 seconds in a day.

1. Guess how many feet there are in 25 miles.
2. Find the right answer by multiplying. There are 5,280 ft. in one mile.
3. How near did you guess?
4. Guess how many sheets of paper like this there would be in a pile ten feet high.
5. Find the right answer, counting 260 sheets to an inch.
6. How near did you guess?
7. Guess how many pounds 3 empty freight cars weigh.
8. Find the right answer, counting 36,450 pounds as the weight of one freight car.
9. How near did you guess?
10. Name some place that you think is about 5000 feet from the school. About 10,000 ft. from the school. About 25,000 ft. from the school. About 50,000 ft. from the school. About 95,000 ft. or 18 miles from the school.

Find the quotients. Put $ and . in each quotient to show which numbers mean dollars and which numbers mean cents.

11. \[ \frac{2}{\$164.50} \]
12. \[ \frac{5}{\$326.25} \]
13. \[ \frac{3}{\$136.38} \]
14. \[ \frac{4}{\$18.24} \]
15. \[ \frac{8}{\$38.48} \]
1. Copy this. Write the missing numbers. Show it to your teacher to be sure you have them all right.

\[
10 \times 10 = \ldots \quad 10 \times 100 = \quad 10 \times 1000 = \\
10 \times 20 = \ldots \quad 10 \times 200 = \quad 10 \times 2000 = \\
100 \times 10 = \ldots \quad 100 \times 100 = \quad 100 \times 1000 = \\
100 \times 30 = \ldots \quad 100 \times 300 = \quad 100 \times 3000 = \\
\]

To multiply by 10, annex 0
To multiply by 100, annex 00

2. State the products:

<table>
<thead>
<tr>
<th>a</th>
<th>b</th>
<th>c</th>
<th>d</th>
<th>e</th>
<th>f</th>
<th>g</th>
<th>h</th>
</tr>
</thead>
<tbody>
<tr>
<td>216</td>
<td>216</td>
<td>472</td>
<td>472</td>
<td>250</td>
<td>250</td>
<td>975</td>
<td>975</td>
</tr>
<tr>
<td>10</td>
<td>100</td>
<td>100</td>
<td>10</td>
<td>100</td>
<td>100</td>
<td>10</td>
<td>100</td>
</tr>
</tbody>
</table>

3. Write the products:

<table>
<thead>
<tr>
<th>a</th>
<th>b</th>
<th>c</th>
<th>d</th>
<th>e</th>
<th>f</th>
<th>g</th>
<th>h</th>
</tr>
</thead>
<tbody>
<tr>
<td>35</td>
<td>25</td>
<td>16</td>
<td>796</td>
<td>144</td>
<td>400</td>
<td>700</td>
<td>500</td>
</tr>
<tr>
<td>100</td>
<td>10</td>
<td>100</td>
<td>100</td>
<td>100</td>
<td>100</td>
<td>100</td>
<td>100</td>
</tr>
</tbody>
</table>

4. Examine these:

\[
\begin{array}{cccc}
381 & 381 & 628 & 628 \\
90 & 90 & 20 & 20 \\
\hline
000 & 34290 & 12560 & 12560 \\
\end{array}
\]

\[
\begin{array}{cccc}
\$3.58 & \$3.58 & \$.60 & \$.60 \\
\hline
000 & 34290 & 12560 & 12560 \\
\end{array}
\]

\[
\begin{array}{cccc}
\$214.8 & \$214.8 & \$214.80 & \$214.80 \\
\hline
\end{array}
\]

5. Write the products:

<table>
<thead>
<tr>
<th>a</th>
<th>b</th>
<th>c</th>
<th>d</th>
<th>e</th>
<th>f</th>
<th>g</th>
<th>h</th>
</tr>
</thead>
<tbody>
<tr>
<td>$2.71</td>
<td>$4.80</td>
<td>$6.75</td>
<td>$5.61</td>
<td>$3.15</td>
<td>$4.32</td>
<td>$9.42</td>
<td>$8.05</td>
</tr>
<tr>
<td>40</td>
<td>20</td>
<td>30</td>
<td>90</td>
<td>40</td>
<td>80</td>
<td>60</td>
<td>70</td>
</tr>
</tbody>
</table>

0 times any number = 0

6. State the products:

\[
\begin{array}{cccccccc}
21 & 21 & 23 & 23 & 43 & 43 & 43 & 12 & 12 \underline{11} \\
4 & 40 & 3  & 30 & 2  & 20 & 200 & 5  & 50 \underline{60} \\
\end{array}
\]
1. Find the products:

   \[
   \begin{array}{cccccccc}
   a. & b & c & d & e & f & g \\
   329 & 708 & 225 & 750 & 409 & 3875 & 4625 \\
   213 & 432 & 630 & 192 & 25 & 9 & 18 \\
   \end{array}
   \]

2. Find the products:

   \[
   \begin{array}{cccc}
   a & b & c \\
   625 & 0 \times 625 = 0. \text{ Write two 0s, one under each 0.} & 175 & 342 \\
   300 & Write the 5 of 15 under the 3. & 500 & 200 \\
   \end{array}
   \]

3. Look carefully at the two ways of doing this example.

   \[
   \begin{array}{cccc}
   142 & 142 & 0 \times 142 = 000, \text{ but we need not write the 000.} \\
   302 & 302 & Write the 6 under the 3 of 302. \\
   \hline
   284 & 284 & The 426 counts as 42,600 in adding. \\
   000 & 426 & \\
   426 & 42,884 \\
   42,884 & \\
   \end{array}
   \]

4. Find the products:

   \[
   \begin{array}{cccc}
   a & b & c & d \\
   463 & 375 & 144 & 280 \\
   204 & 105 & 308 & 102 \\
   \end{array}
   \]

5. Check your answers to a, b, c, d, by multiplying, using 204, 105, 308, and 102 as multiplicands.

   \[
   \begin{array}{cccc}
   204 & 105 & 308 & 102 \\
   463 & 375 & 144 & 280 \\
   \end{array}
   \]

6. Find the products:

   \[
   \begin{array}{cccccccc}
   a & b & c & d & e & f & g \\
   \$26.50 & \$12.75 & \$3.49 & \$1.98 & \$7.98 & \$52.45 & \$2.75 \\
   7 & 23 & 90 & 204 & 68 & 305 & 508 \\
   \end{array}
   \]

   \[
   \begin{array}{cccccccc}
   h & i & j & k & l & m & n \\
   308 & 560 & 250 & 816 & 125 & 640 & 640 \\
   207 & 403 & 125 & 90 & 600 & 609 & 400 \\
   \end{array}
   \]
32. Practice

Write as many correct answers as you can in five minutes.*

<table>

33. Problems

Solve as many as you can in 10 minutes.

1. The schoolroom has 6 rows, 7 desks in a row, and two extra desks. How many desks has it in all?
2. Miss Adams' class had 37 pupils when school opened. Four new children joined the class. During September, 9 pupils were changed to another class. How many were in the class Oct. 1?
3. Alice is reading a book of 85 pages. She has read 25 pages. How long will it take her to finish it if she reads 10 pages an hour?
4. Will is reading a book of 90 pages. He has read 60 pages. How many pages must he read per hour to finish the book in two hours?

*To the Teacher.—In this and similar drills on the following pages, the pupils need not copy the numbers. Have them lay a piece of paper over the page, write answers on it, folding under to write answers for the second row, when necessary.
Subtract. Write the differences. See how many you can get correct in five minutes.

35. Problems

Solve as many as you can in 15 minutes.

1. Mary is 9, Lucy is 11, Dora is 13. In how many years will Mary be 18? How old will Lucy be then? How old will Dora be?
2. Kate’s baby sister is two years and a half old. How many months old is she?
3. Which is longer, a year and a half or 15 months? How much longer?
4. A train leaves Boston at 3:15 P.M. and arrives at Springfield at 5:45 P.M. How long does this train take to go from Boston to Springfield?
5. How far does a train travel in 4 hours at the rate of 32 miles per hour?
6. Frank walked 12 miles to his uncle’s farm. He started at 9 A.M. and reached there at 1 P.M. How many miles per hour did he walk?
36. Practice

Write the quotients. See how many you can do correctly in 5 minutes. If your work is correct there will be no remainders.

1. \[8 \overline{3696}\] 2. \[3 \overline{813}\] 3. \[6 \overline{5748}\] 4. \[9 \overline{5184}\] 5. \[4 \overline{2956}\]
6. \[9 \overline{2385}\] 7. \[7 \overline{4459}\] 8. \[8 \overline{5112}\] 9. \[5 \overline{3625}\] 10. \[8 \overline{1856}\]
11. \[6 \overline{19.38}\] 12. \[8 \overline{79.12}\] 13. \[9 \overline{78.66}\] 14. \[7 \overline{66.71}\] 15. \[9 \overline{47.16}\]

37. Problems

Solve as many as you can in 15 minutes.

1. Alice put a dozen eggs under each of three hens, Reddy, Whitey, and Rocky. All of Reddy’s hatched, all but two of Whitey’s, and all but one of Rocky’s. How many of the eggs hatched?
2. Dora wishes to fill 9 fancy baskets, putting 4 red apples and 4 yellow apples in each. How many apples will she need?
3. Nell receives 2 cents a day for 3 weeks for making her big sister’s bed. How much does she receive in all?
4. The postman brought 25 letters to Paul’s house Monday; 1 was for Paul, 2 were for Louise, 3 were for Mrs. Leroy. The rest were for Mr. Leroy. How many letters did Mr. Leroy get?
5. On the ball field there are two teams of 9 boys each, and 7 substitutes. In all there are... boys.
Divide each of these numbers by 7. Write the quotients and remainders. Then divide each by 4. Then by 9. Then by 5.

875  1500  650  365  1000  4896

39. Problems

Solve as many as you can in 20 minutes.

1. There are 38 pupils in Miss Williams' class and 32 in Miss Brown's. The principal wants to make the two classes equal in size. What must he do?

2. Lucy baked two dozen cakes. She sent 6 to her aunt, and the family ate 9 for supper. Lucy found only 9 left and thought her brother had taken one. Was she right?

3. How many badges 8 inches long can be cut from 2 yd. of ribbon?

4. How many feet of fence are needed to go around all four sides of a pen 20 ft. long and 10 ft. wide?

5. The boys want to measure off a line 30 yd. long from home plate to first base. They have a pole 10 feet long. What should they do?

6. Alice feeds her chickens 1 pt. of corn a day. How long will two pecks last her?

7. A gardener sets out plants 8 in a row. How many rows can he fill with 50 plants. How many plants will be left over?

8. The front of a three-story building has 6 windows in the first story and 7 windows in each of the other stories. How many flags are required to hang two flags in each window?
40. Practice

Copy carefully and find the products. Make all your figures clear when you multiply. Place each figure just where it belongs. Do as much as you can do perfectly in 20 minutes.

<table>
<thead>
<tr>

</table>

41. Problems

1. How much will 6 melons cost at 2 for 25¢?
2. Nell bought 2 lb. sugar at 7¢ a pound and a 5-cent box of matches. She gave the man a quarter of a dollar. How much change should she receive?
3. Henry bought 15 marbles at 5 for a cent and 12 at 3 for a cent. How much should he pay?
4. John bought 2½ dozen buns at 10¢ a dozen and paid with a dollar bill. How much change should he receive?
5. Mary’s mother said, “Get 1 dozen rolls for Mrs. Brown, 1½ dozen for Mrs. Howard, six rolls for Mrs. Macy, and 2 dozen for me.” How many dozen rolls should Mary buy?
6. What is the price per pound when you pay 10¢ for ¼ lb.?
7. When candy is 20 cents a pound, what part of a pound do you get for 10¢? For 5¢?
The Sanitary Laundry Price List

<table>
<thead>
<tr>
<th>Shirts</th>
<th>15</th>
<th>White coats</th>
<th>25</th>
</tr>
</thead>
<tbody>
<tr>
<td>Collars</td>
<td>3</td>
<td>White towels</td>
<td>3</td>
</tr>
<tr>
<td>Cuffs, per pair</td>
<td>4</td>
<td>Stockings, per pair</td>
<td>2</td>
</tr>
</tbody>
</table>

Find the cost of laundering:

8. 2 shirts, 4 collars, and 3 pairs of cuffs.

9. Half a dozen collars, 4 pairs of cuffs, and 3 pairs of stockings.

10. 1 white coat, 3 shirts, and 5 collars.

11. 1 white coat, 2 shirts, 4 collars, and 4 pairs of stockings.

12. 2 coats, 5 towels, 2 shirts, and 5 collars.

<table>
<thead>
<tr>
<th>Special Sale: Highest Grade Tools</th>
</tr>
</thead>
<tbody>
<tr>
<td>Hammers</td>
</tr>
<tr>
<td>1½-lb., 66¢</td>
</tr>
<tr>
<td>1 1/2-lb., 67¢</td>
</tr>
<tr>
<td>2-lb., 68¢</td>
</tr>
</tbody>
</table>

Find the cost of—

13. Two 1 1/2-lb. hammers, a 1/4-inch chisel, and a 1/8-inch bit.

15. A 2-lb. hammer, two 1/4-inch chisels, and two 1/8-inch bits.

16. Two sets of bits, each set containing one 3/8-inch bit, one 3/6-inch bit, and one 1/8-inch bit.

17. A set containing three chisels, one of each size.

18. Will has 95 cents. How much more does he need to buy a 1 1/2-lb. hammer and a 1/8-inch bit.
Sometimes you need to use numbers smaller than 1. Sometimes, when you buy ribbon, you do not buy a whole yard, but only $\frac{5}{8}$ yd., or $\frac{3}{4}$ yd., or $\frac{7}{8}$ yd. When you buy candy you often buy $\frac{1}{4}$ lb. or $\frac{1}{3}$ lb.

Look at these inch lengths.

1. Which is divided into quarters or fourths or $\frac{1}{4}$s?

2. Which is divided into fifths or $\frac{1}{5}$s?

3. Which is divided into sixths or $\frac{1}{6}$s?

4. Which is divided into eighths or $\frac{1}{8}$s?

5. Which of these lines is $\frac{1}{2}$ in. long?

6. Which is $\frac{5}{6}$ inches long? Which is $\frac{3}{8}$ in. long?

7. Take a sheet of paper and your rule.

   Draw a line $\frac{1}{6}$ inch long; mark it "$\frac{1}{6}$ in."

8. Draw a line $\frac{3}{8}$ in. and mark it.

9. Draw a line $\frac{3}{4}$ in. and mark it.

10. Draw a pie cut in quarters or $\frac{1}{4}$s.

11. Draw a pie cut in sixths or $\frac{1}{6}$s.

12. Draw a pie with one quarter gone.

   Mark it "$\frac{3}{4}$ of a pie."

14. Draw a bottle one third full of ink.

15. Draw a bottle two thirds full of ink.

16. Draw a bottle half full of ink.

17. Draw a line $\frac{1}{2}$ ft. long. Mark it.

18. Draw a line $\frac{1}{3}$ ft. long. Mark it.

19. Draw a line $\frac{3}{4}$ ft. long. $\frac{2}{3}$ ft. long. $\frac{1}{6}$ ft. long.

20. Draw 1 sq. in. $\frac{1}{4}$ sq. in. $\frac{3}{4}$ sq. in. $\frac{1}{8}$ sq. in.

   $\frac{1}{4}$ $\frac{1}{3}$ $\frac{1}{6}$ $\frac{3}{4}$ $\frac{1}{8}$ $\frac{1}{2}$ $\frac{1}{4}$ $\frac{1}{8}$ are called fractions.
43. Parts of an Inch, Parts of a Foot, and Parts of a Yard

1. Hold your hands about 1 yd. apart.  
2. Hold them about \( \frac{1}{6} \) yd. apart.
3. Show \( \frac{3}{8} \) yd. \( \frac{5}{8} \) yd. \( \frac{7}{8} \) yd.
4. Show \( \frac{1}{3} \) yd. \( \frac{2}{3} \) yd. \( 1\frac{1}{3} \) yd. (a yard and a third of a yard more).
5. Draw \( 1\frac{1}{2} \) yd. on the blackboard. 2 yd. 2\( \frac{1}{2} \) yd.
6. Hold your hands \( \frac{1}{4} \) ft. apart. Hold them \( \frac{1}{8} \) or \( \frac{1}{8} \) ft. apart.
7. Show 1 ft. 1\( \frac{1}{8} \) ft. \( \frac{1}{8} \) ft. or \( \frac{1}{8} \) ft. \( \frac{1}{4} \) ft. or \( \frac{1}{2} \) ft.
8. Hold your hands 2 ft. apart. 2\( \frac{1}{2} \) ft. 3 ft. 3\( \frac{1}{2} \) ft.
9. Which is longest, \( \frac{1}{2} \) in., \( \frac{3}{8} \) in., \( \frac{4}{8} \) in., \( \frac{6}{8} \) in., or \( \frac{7}{8} \) in.?
10. Which is shortest? 11. Which is half as long as \( \frac{1}{8} \) inch?
12. Which is longest, \( \frac{1}{8} \) yd., \( \frac{3}{8} \) yd., \( \frac{5}{8} \) yd., or \( \frac{7}{8} \) yd.?
13. Which is shortest?
14. How many inches are there in \( \frac{1}{4} \) ft.? In \( \frac{1}{8} \) ft.? In \( \frac{1}{8} \) ft.? In \( \frac{1}{8} \) ft.?
Take your rule.

a. 

b. 

c. 

d. 

e. 

f. 

15. Which of these lines is \( \frac{3}{8} \) in. long? Which is \( 1\frac{1}{8} \) in.?
16. Which is 2\( \frac{3}{8} \) in.? Which is 3\( \frac{3}{8} \) in.? Which is \( 1\frac{1}{8} \) in.?
17. Which is 2\( \frac{1}{2} \) in.?
18. How many inches are there in \( \frac{1}{4} \) yd.? (Think 2\( \frac{3}{8} \) )
19. How many inches are there in \( \frac{1}{8} \) yd.? 20. In \( \frac{1}{8} \) yd.?
### 44. Finding a Part of a Number

Supply the missing numbers. Do A first. Then do B. Then do C; and so on.

<table>
<thead>
<tr>
<th>A.</th>
<th>E.</th>
<th>I.</th>
</tr>
</thead>
<tbody>
<tr>
<td>(\frac{1}{2}) of 12 =</td>
<td>(\frac{1}{6}) of 12 =</td>

1. The top line of numbers is for parts of a pound. What is the bottom line for?

2. Read along the scale, saying, "\(\frac{1}{8}\) of a pound = 2 ounces, \(\frac{1}{4}\) of a pound = 4 ounces, \(\frac{3}{8}\) of a pound = 6 ounces," and so on.

3. Shut your eyes and count by eighths of a pound and ounces, saying "\(\frac{1}{8}\) lb. = ... oz., \(\frac{3}{8}\) lb. or \(\frac{1}{4}\) lb. = ... oz., \(\frac{3}{8}\) lb. = ... oz., \(\frac{3}{8}\) lb. or \(\frac{1}{2}\) lb. = ... oz."

4. Count by fourths of a pound and ounces, saying, "\(\frac{1}{4}\) lb. = ... oz., \(\frac{3}{4}\) or \(\frac{1}{2}\) lb. = ... oz., \(\frac{3}{4}\) lb. = ... oz., 1 lb. = ... oz., 1\(\frac{1}{4}\) lb. = ... oz., 1\(\frac{3}{4}\) lb. = ... oz., 2 lb. = ... oz., 2\(\frac{1}{4}\) lb. = ... oz."

5. Count by half pounds and ounces, saying, "\(\frac{1}{2}\) lb. = ... oz., 1 lb. = ... oz., 1\(\frac{1}{2}\) lb. = ... oz.," and so on up to five pounds.

6. Supply the missing numbers:

   A.  

   \(\frac{1}{8}\) of 16 =  

   \(\frac{3}{8}\) of 16 =  

   \(\frac{5}{8}\) of 16 =  

   \(\frac{7}{8}\) of 16 =  

   \(\frac{1}{4}\) of 16 =  

   \(\frac{3}{4}\) of 16 =  

   B.  

   \(\frac{1}{2}\) of 16 =  

   \(\frac{7}{8}\) lb. = ... oz.  

   \(\frac{3}{8}\) lb. = ... oz.  

   1\(\frac{1}{2}\) lb. = ... oz.  

   2\(\frac{1}{2}\) lb. = ... oz.  

   2\(\frac{3}{8}\) lb. = ... oz.
Answer the questions and supply the right numbers where the dots are.

1. Find the cost of \( \frac{1}{4} \) pound of peppermints. \( \frac{1}{4} \) lb. caramels. \( \frac{1}{4} \) lb. chocolates. \( \frac{1}{4} \) lb. preferred chocolates.

2. Find the cost of \( \frac{1}{2} \) lb. peppermints. \( \frac{1}{2} \) lb. caramels. \( \frac{1}{2} \) lb. chocolates. \( \frac{1}{2} \) lb. preferred chocolates.

3. What part of a pound of peppermints do you get for 5¢? For 10¢? For 15¢?

4. Mary buys 5¢ worth of caramels. Does she get \( \frac{1}{2} \) lb. or \( \frac{1}{4} \) lb. or \( \frac{1}{8} \) lb.?

5. For 10¢ you can get \ldots lb. peppermints or \ldots lb. caramels or \ldots lb. preferred chocolates.

6. The storeman puts up special boxes containing \( \frac{5}{8} \) lb. caramels. What do you think he charges for a box?

7. What do you think he charges for a box containing \( \frac{5}{8} \) lb. of preferred chocolates?

8. Tell the missing numbers:

\[
\begin{align*}
\frac{1}{4} \text{ of } 20 &= \frac{1}{8} \text{ of } 80 &= \frac{1}{2} \text{ of } 40 &= \frac{1}{2} \text{ of } 60 = \\
\frac{3}{4} \text{ of } 20 &= \frac{3}{8} \text{ of } 80 &= \frac{3}{8} \text{ of } 40 &= \frac{3}{8} \text{ of } 60 = \\
\frac{3}{4} \text{ of } 60 &= \frac{7}{8} \text{ of } 80 &= \frac{3}{5} \text{ of } 40 &= \frac{3}{5} \text{ of } 60 = \\
\frac{3}{4} \text{ of } 80 &= \frac{3}{5} \text{ of } 40 &= \frac{1}{4} \text{ of } 40 &= \frac{5}{6} \text{ of } 60 =
\end{align*}
\]
1. John, Dick, and Will bought a bag of marbles for 5¢. John paid 1¢, Dick paid 2¢, Will paid 2¢. There were 40 marbles. How many of the marbles should John get? How many should Dick get? How many should Will get?

2. Nell and Kate bought 12 rolls of colored paper for 3¢. Nell paid 1¢, Kate paid 2¢. How many of the rolls should Nell get? How many should Kate get?

3. Fred and Joe bought a bag of popcorn for 5¢. Fred paid 2¢. Joe paid 3¢. What part of the popcorn did Fred pay for?

4. Mary and Alice bought a roll of ribbon for 50¢. Mary paid 30¢. Alice paid 20¢. What part of the ribbon did Mary pay for? What part did Alice pay for?

</table>
49. Sharing

1. Edward and Robert buy a collection of foreign stamps for 25¢. Edward pays 15¢, Robert pays 10¢. There were 715 stamps. So Edward takes \( \frac{3}{5} \) of the stamps and Robert takes \( \frac{2}{5} \). How many stamps shall Edward take? How many shall Robert take?

Write \( \frac{5}{715} \) to find \( \frac{1}{5} \) of 715. Multiply the quotient by 3 to find Edward’s share. How do you find Robert’s share?

2. Dick and James bought an 8¢ collection of stamps. Dick paid 5¢ and James paid 3¢. There were 120 stamps to be divided. How many should Dick take? How many should James take?

3. Henry and Albert bought a 40¢ collection of stamps. Henry paid 25¢ and Albert paid 15¢. There were 1000 stamps to be divided. How many eighths of the stamps should Henry get? How many stamps should he get?

4. Find \( \frac{5}{6} \) of 144. 5. \( \frac{3}{5} \) of 640. 6. \( \frac{3}{8} \) of 5280.
7. \( \frac{1}{3} \) of 231. 8. \( \frac{3}{4} \) of 196.
9. Find \( \frac{3}{4} \) of $23.75. 10. \( \frac{3}{8} \) of $9.68. 11. \( \frac{2}{3} \) of $3.99.
12. \( \frac{3}{4} \) of $5.00.
13. Find \( \frac{1}{2} \) of 960. 14. \( \frac{1}{3} \) of 960. 15. \( \frac{1}{4} \) of 960.
16. \( \frac{1}{5} \) of 960. 17. \( \frac{1}{6} \) of 960. 18. \( \frac{1}{8} \) of 960.

50.

1. Count by \( \frac{3}{8} \)s to 8, beginning \( \frac{1}{2} \), 1, 1\( \frac{1}{2} \).
2. Count by \( \frac{3}{8} \)s to 9, beginning \( \frac{1}{3} \), \( \frac{2}{8} \), 1, 1\( \frac{1}{3} \).
3. Count by \( \frac{2}{5} \)s to 5, beginning \( \frac{1}{4} \), \( \frac{1}{2} \), \( \frac{3}{4} \), 1, 1\( \frac{1}{4} \), 1\( \frac{1}{2} \).
4. Count by \( \frac{7}{5} \)s to 5, beginning 1\( \frac{1}{6} \), 1\( \frac{1}{5} \), 1\( \frac{1}{4} \), 1\( \frac{1}{5} \), 2.
At the Lincoln School each child in the fourth grade is given a mark every month. 100 is the highest mark a child can get.

1. Mary had 90 in arithmetic in Sept., 95 in Oct., and 94 in Nov. What was her average in arithmetic for the three months?

The average equals the sum of the marks divided by the number of marks there are.

2. John had 60 in Sept., 74 in Oct., and 70 in Nov. What was his average?

3. Up till Jan., Nell had 90, 95, 93, and 94. What was her average for the four months?

4. If she has 98 in Jan. what will her average be for the first five months?

The class had three tests in arithmetic in September. 10 was the highest a child could get in a test.

5. John had 8 in the first test, 9 in the second, and 8 in the third. What was his average for the three?

\[ 8 + 9 + 8 = 25 \]

5\overline{25} Write the 1 after the quotient over the divisor like this: \(8\frac{1}{5}\).

\(8\frac{1}{5}\) is right, for \(3 \times 8 = 24, 3 \text{ thirds} = 1, 24 \text{ and } 1 = 25\).

6. Alice had 9 in the first, 10 in the second, and 9 in the third. What was her average for the three?

7. Joe had 6 in the first, 7 in the second, and 9 in the third. What was Joe's average?

8. In Oct. the class had four tests. Dick had 9, 8, 7, and 9. What was his average?

\[ 9 + 8 + 7 + 9 = 33 \]

4\overline{33} Write the 1 after the quotient over the divisor like this: \(8\frac{1}{4}\).

\(8\frac{1}{4}\) is right for \(4 \times 8 = 32, 4 \times \frac{1}{4} = 1, 32 + 1 = 33\).
52. A Test

The teacher will give you 10 minutes for each of these tests. Do as many as you can get right in the 10 minutes. Mark yourself on each test, counting 1 for each right answer. Find your average for the two tests.

Test I

You need not copy the examples. Write answers to the first five on the top line of a sheet of paper. Fold this under. Write the answers to the next five on another line.

1. Find the total and average for hens B, C, D, E, F, G, and H, as Mary has done for hen A. Be sure to write ½ or ¾ or ⅜ when it is needed.

2. How many eggs did Mary get from all 8 hens the first week? The second week? The third? The fourth? The fifth? In all five weeks?

3. Mary gave her mother a dozen and a half of these eggs, and sold the rest. How many dozen did she sell?

4. She sold them for 30¢ a dozen. How much did she receive?

5. It costs more for food for the hens in some months than in others. The average cost for food for one hen for one month Mary reckons at 14¢. What is the cost for one hen for one year?

6. What is the cost for 8 hens for one year?

7. What is the cost for 13 hens for 6 months?
Here are some prices at Valenti’s Fruit Store.

<table>
<thead>
<tr>
<th>Peaches</th>
<th>Pears</th>
<th>Oranges</th>

<td>6 for 25</td>
<td>7 for a dollar</td>
</tr>
</tbody>
</table>

1. When you buy 2 peaches for 5¢ what does it cost you for each peach?
   
   Think \( \frac{2}{5} \)

2. When you buy 3 pears for 10¢ what does it cost you for each pear?
   
   Think \( \frac{3}{10} \)

3. When you buy 6 oranges for 25¢ what does it cost you for each orange?

4. Mary’s father sells milk to the creamery. Sometimes he gets 2 1/2¢ a quart. How much does he get for every two quarts he sells at 2 1/2¢ a quart?

5. When you buy 7 melons for a dollar what does it cost you for each melon? (We read \( \frac{3}{7} \) as “two sevenths.”)

6. If you buy marbles at 3 for a cent, how much does each marble cost you?

7. If you buy picture postcards at 2 for a cent, how much does each postcard cost you?

8. How much more does a peach cost when you buy one at a time than when you buy two at a time, at Valenti’s prices?

9. What does it cost you for a dozen oranges, at the rate of 6 for 25¢?

10. What does it cost you for a dozen pears, at the rate of 3 for 10¢?
1. Tell what it costs for one thing when you get 3 for a cent.
2. When you get 5 for a cent. 2 for 1¢. 8 for 1¢. 4 for 1¢.
3. When you get 2 for 5¢. 3 for 10¢. 6 for 25¢.
4. When you get 3 for 5¢.
   Think, "I am dividing 5 by 3. 1 and 2 remainder means 1 1/3."
5. When you get 4 for 15¢.
   Think, "I am dividing 15 by 4. 3 and 3 remainder means 3 3/4."
6. When you get 3 for 50¢. 7 for 10¢. 8 for 15¢.
7. When you get 6 for 10¢. (Say 2/3 for 3⁄₆.)
8. When you get 8 for 50¢. (Say 1⁄₄ for 3⁄₄.)
9. When you get 4 for 10¢. (Say ½ for ¾.)
10. When you get 6 for 25¢. 6 for 10¢. 3 for 10¢.
11. When you get 4 for 25¢. 4 for 15¢. 4 for 10¢. 4 for 5¢. 4 for 30¢. 4 for 50¢.
12. When you get 8 for 10¢. 8 for 25¢. 8 for 15¢. 8 for 50¢.
13. When you get 2 for 5¢. 2 for 25¢. 2 for 10¢. 2 for $1.00.
14. Tell what it costs for one thing when you get—
2 for 5¢  3 for 10¢  2 for 25¢  3 for 50¢
3 for 5¢  4 for 10¢  3 for 25¢  6 for 50¢
4 for 5¢  6 for 10¢  4 for 25¢  8 for 50¢
2 for 1¢  7 for 10¢  6 for 25¢  8 for 1¢
6 for 1¢  8 for 10¢  7 for 25¢  4 for 1¢
15. At 2 for a cent, how many marbles do you get for 4¢?
Mary gets different prices for the eggs she sells at different times of the year.

1. At 20¢ a dozen, what does she get for 2 dozen? For ½ dozen? For 2½ dozen? For 3½ dozen? For 5 dozen?
2. At 24¢ a dozen what does she receive for 1½ dozen? For 2 doz.? For ½ doz.?
3. At 30¢ per doz. what does she receive for ½ doz.? For 1½ doz.? For 4 doz.? For 2½ doz.? For 6 eggs? For 4 eggs or ½ doz.? For 8 eggs or ¾ doz.?
4. At 32¢ per doz. what does she receive for ½ doz.? For 3 doz.? For 1½ doz.?

57.

Write the quotients. The first row shows the way.

| 37½ | 138½ | 26¾ | 153¼ | 53¼ |
| 2|75 | 3|415 | 3|80 | 4|615 | 4|213 |
|---|---|---|---|---|
| 1. | 2. | 3. | 4. | 5. | 6. |
| 2|115 | 3|190 | 4|75 | 4|135 | 5|726 | 5|265 |
| 7. | 8. | 9. | 10. | 11. | 12. |
| 3|281 | 2|335 | 5|117 | 4|297 | 4|100 | 5|428 |
| 4|695 | 6|139 | 2|475 | 3|505 | 8|185 | 8|361 |

State the quotients. The first row shows the way.

A. B. C. D.

19 ÷ 2 = 9½ 29 ÷ 3 = 9¾ 23 ÷ 4 = 5¾ 45 ÷ 8 = 5½
9 ÷ 2 = 10 ÷ 3 = 15 ÷ 4 = 35 ÷ 8 =
17 ÷ 2 = 17 ÷ 3 = 25 ÷ 4 = 19 ÷ 8 =
This is a plan of a little orchard that Henry wants for himself. Each little square stands for a peach tree. \( \frac{1}{4} \) inch stands for 1 rod. Each little circle stands for a fence post.

1. How many rods long is it?
2. How many feet long is it?

*Remember that 1 rod = 16\( \frac{1}{2} \) ft.*

3. How many rods wide is it?
4. How many feet wide is it?
5. How many trees does the plan show?
6. How far apart are they?

7. How many rods of fence wire will Dick need, for all four sides?
8. How much will the wire fence cost at 35\( \frac{1}{2} \) per rod?
9. Henry’s uncle promises Henry 5 fence posts for each Saturday Henry will help him. How many days must Henry help his uncle in order to get the fence posts?

10. Henry’s father lets him keep for himself two thirds of the money he earns from a strawberry bed on the farm. If Henry sells 150 quarts of strawberries at 10\(\frac{1}{2}\) a quart, what will his share of the money be?

11. Henry hopes to get 25 bushels of peaches the third year after he sets out the trees. How much will he receive if he sells them for $1.05 a bushel?
1. Henry's father bought 200 trees to set out. Eleven of them looked so weak that he did not set them out. How many did he set out?

2. He set them out 9 in a row. How many rows did he have?

3. He set them in straight lines 1 rod apart each way. Draw a plan of the whole orchard, using ¼ inch for a rod, and making a dot for each peach tree.

4. He built a fence around the orchard ½ rod distant from the outside line of trees. Draw this fence on your plan. What part of an inch will you use for ½ rod?

5. What is the shape of the field inclosed by the fence—a triangle, a circle, a rectangle, a pentagon, or a hexagon?

6. How many rods long is it?

7. How many rods wide is it?

8. How many square rods does it contain?

9. Is the orchard about ½ acre or about 1½ acres or about 3 acres?

10. Is the orchard about 5 times as big as Henry's, or about 10 times as big, or about 20 times as big?

11. How much did the fence cost at 35¢ per rod?

1 acre = 160 sq. rd.

12. How many square rods are there in ½ acre?

19. In an acre and a half? 20. In 2½ acres?
60. How Lewis Earns Money

Lewis Drake lives on a farm. Every spring he plants an acre of corn. In 1914 he harvested 46 bushels. In 1915 he harvested 71 bushels. In 1916 he harvested 100 bushels.

1. How much more did he harvest in 1915 than in 1914?
2. How much more did he harvest in 1916 than in 1915?
3. The record for his county for a boy of his age was 119 bushels from one acre. How much more was that than Lewis' best record?
4. In 1914 he received 52¢ per bushel. How much did he receive for 46 bushels?
5. He paid out, for ploughing, seed, and fertilizers, $8.75. How much more did he receive than he paid out?

61. How Elsie Earns Money

Elsie Brown lives in a city. She makes very beautiful doll's clothes, which her father sells to a big New York toy store.

1. Last year she made six dresses which sold for $3.25 each. The materials for all six cost $5.64. How much more did Elsie receive for the dresses than the materials cost her?
2. She also made three dresses which sold for $6.25, $7.50, and $8.75. The materials for all three cost $7.92. How much was Elsie's profit on these three dresses?
3. She designed a cheap dress that was very pretty and sold six dozen of them for 35 cents each. How much did she receive for these dresses?
62. Dividing by Large Numbers

1. Just before Christmas Frank's father sent 360 oranges to be divided among the children in Frank's class. There are 29 children. How many oranges should each child receive? How many oranges will be left over?

Here is the best way to find out:

\[
\begin{array}{c}
29 \overline{360} \\
29 \\
70 \\
58 \\
12
\end{array}
\]

Think how many 29s there are in 36. 1 is right.
Write 1 over the 6 of 36. Multiply 29 by 1.
Write the 29 under the 36. Subtract 29 from 36.
Write the 0 of 360 after the 7.
Think how many 29s there are in 70. 2 is right.
Write 2 over the 0 of 360. Multiply 29 by 2.
Write the 58 under 70. Subtract 58 from 70.
There is 12 remainder.

Each child gets 12 oranges, and there are 12 left over. This is right, for 12 multiplied by 29 = 348, and 348 + 12 = 360.

2. 472 apples are to be divided equally among 21 children. How many apples does each child receive and how many will be left over?

Divide. Find the quotients and remainders. Copy the numbers very carefully.

\[
\begin{array}{cccccc}
32 & | & 685 \\
23 & | & 512 \\
41 & | & 1691 \\
21 & | & 1495 \\
24 & | & 798 \\
\end{array}
\]

In No. 8, keep on dividing by 31 until you have used the 5, the 8, and the 7, and have four figures in the quotient.

\[
\begin{array}{cccccc}
31 & | & 99,587 \\
\end{array}
\]

8.

9.

10.

11.

12.

13.

22 | 253
22 | 2895
21 | 8891
22 | 290
32 | 16,368

Check your results for 9, 10, 11, 12, and 13.
1. The boys and girls of the Welfare Club plan to earn money to buy a victrola. There are 23 boys and girls. They can get a good second-hand victrola for $5.75. How much must each earn if they divide the cost equally?

Here is the best way to find out:

\[
\begin{array}{c|c}
23 & $5.75 \\
\hline
46 & \text{Write 2 over the 7 of 57. Multiply 23 by 2.} \\
115 & \text{Write 46 under 57 and subtract. Write the 5 of 575 after the 11.} \\
115 & \text{Think how many 23s there are in 115. 5 is right.} \\
\end{array}
\]

Think how many 23s there are in 115. 5 is right.
Write 5 over the 5 of 575. Multiply 23 by 5.
Write the 115 under the 115 that is there and subtract.
There is no remainder.
Put $ and the decimal point where they belong.
Each child must earn 25 cents. This is right, for $0.25 multiplied by 23 = $5.75.

2. Divide $71.76 equally among 23 persons. How much is each person's share?

3. Check your result for No. 2 by multiplying the quotient by the divisor.

Find the quotients. Check each quotient by multiplying it by the divisor.

\[
\begin{array}{c|c|c|c|c}
23 & $99.13 & 25 & $18.50 & 21 & $129.15 & 13 & $29.25 & 32 & $73.92 \\
\end{array}
\]

1 bushel = 32 qt.

9. How many bushels are there in 288 qt.? 10. In 192 qt.? 11. In 416 qt.?
1. Besides the land used for paths, the school garden has 6100 sq. ft. for the children to plant. There are 254 children. How many sq. ft. will each child have for his garden if the 6100 sq. ft. is divided? How many sq. ft. will be left over?

\[ 254 \div 6100 \]  
*Think how many 254s there are in 610.*  
*Three is wrong, for \( 3 \times 254 = 762 \), which is more than 610.*

2. The children at Hillside farm worked hard picking berries all last summer and picked in all 744 qt. They sold them all in crates, 24 quarts to a crate. How many crates did they sell?

3. Divide 8 dozen oranges among 22 children. How many oranges will each child get? How many will be left over?

Find the quotients and remainders. When there is 0 remainder write "and no r."

4. \[ 21 \div 85 \]  
5. \[ 25 \div 85 \]  
6. \[ 17 \div 72 \]  
7. \[ 25 \div 72 \]  
8. \[ 35 \div 72 \]

9. \[ 25 \div 100 \]  
10. \[ 31 \div 100 \]  
11. \[ 23 \div 496 \]  
12. \[ 23 \div 6285 \]

13. \[ 61 \div 250 \]  
14. \[ 43 \div 1338 \]  
15. \[ 83 \div 249 \]

*The number to be divided is called the dividend.*  
*The number by which you divide is called the divisor.*

16. Name the dividends in examples 4 to 15.
17. Name the divisors in examples 4 to 15.
18. Check your answers to examples 12, 13, 14, and 15. Multiply the divisor by the quotient and add the remainder. The result will be the dividend if your work is correct.
Find the quotients and remainders. If there is 0 remainder, write “and no r.” after the quotient. Check your answers by multiplying and adding.

1. \(21 \longdiv{466}\)  
2. \(21 \longdiv{12,894}\)  
3. \(21 \longdiv{133}\)  
4. \(31 \longdiv{744}\)  
5. \(31 \longdiv{190}\)  
6. \(31 \longdiv{10,391}\)  
7. \(89 \longdiv{1963}\)  
8. \(69 \longdiv{2139}\)  
9. \(92 \longdiv{368}\)  
10. \(25 \longdiv{575}\)

Find the quotients and remainders. Sometimes you may think of a wrong figure for the quotient. Then you must see whether it is too large or too small and change it. But try to think of the right number the first time.

11. \(28 \longdiv{817}\)  Are there 3 \(28\)'s in 81 or only 2? 
12. \(47 \longdiv{992}\)  Are there 2 \(47\)'s in 99 or only 1? 
13. \(27 \longdiv{538}\)  Are there 2 \(27\)'s in 53 or only 1? 
14. \(17 \longdiv{476}\)  Are there 3 \(17\)'s in 47 or only 2? 
15. \(358 \longdiv{1062}\)  Try 2 as the quotient figure. How do you know 2 is right and not 3? 
16. \(139 \longdiv{276}\)  Try 1. Why is 2 wrong? 
17. \(312 \longdiv{1249}\)  Try 4. Why is 3 wrong? 
18. \(151 \longdiv{375}\)  Shall you try 3 or 2? 
19. \(123 \longdiv{375}\)  Shall you try 3 or 2? 
20. \(225 \longdiv{650}\)  Shall you try 3 or 2? 
21. \(25 \longdiv{425}\)  Shall you try 2 or 1? 
22. \(15 \longdiv{470}\)  Shall you try 4 or 3? 
23. \(15 \longdiv{615}\)  Shall you try 4 or 3? 
24. \(21 \longdiv{1495}\)  Shall you try 7 or 6 or 5?
66. Uses of Long Division

(Use pencil and paper when you need to.)

1. 14 boys plan to buy a football together. It costs 98¢. How much must each boy pay?

2. They plan to buy a second-hand catcher's mask for 70¢. Must each boy pay 7¢ or 6¢ or 5¢?

3. Tennis balls cost 25¢ each, $3.00 a dozen. Do you get 6, 7, or 8 for $1.75? Do you get 7, 8, or 9 for $2.25? Do you get 5 or 6 for $1.25?

4. How many yards of ribbon that costs 15¢ a yard do you get for 60¢? For 45¢? For 75¢? For 90¢? For $1.05?

5. How many yards of cloth that costs 18¢ a yard do you get for 36¢? For 90¢? How much do 3 yards of it cost? How much will 2½ yards cost?

6. Tickets to the concert cost 75¢ each. How much do three tickets cost? How many tickets will $2.00 buy, and how much will there be left over? How many tickets will $3.00 buy? How many tickets will $4.00 buy and how much will be left over? Will $5.00 buy 7 tickets? Will $6.00 buy 8 tickets?

7. Nell's small stamp-book holds 16 stamps on a page. How many pages will 32 stamps fill? 64 stamps? How many stamps will fill 6 pages? How many stamps will fill 5 pages? How many pages will 100 stamps fill and how many stamps will be left over?

8. Nell's large stamp-book holds 54 stamps on a page. How many pages will 500 stamps fill, and how many stamps will be left over?
Frank helps his father Saturdays in his father's fish market. He tries not to keep a customer waiting. So he finds the cost of a purchase quickly, without pencil and paper whenever he can. He found the cost of each of these purchases without pencil or paper and did not make a single mistake. See if you can do as well. \( \frac{1}{2} \) is the way business men write "one half."

1. 3 lb. flounder.
2. 4 lb. cod.
3. 2\( \frac{1}{2} \) lb. haddock.
4. 2 lb. bluefish.
5. 3\( \frac{1}{4} \) lb. haddock.
6. 5\( \frac{1}{2} \) lb. bluefish.
7. 3 lb. cod.
8. 2\( \frac{1}{2} \) lb. bluefish.
9. 6 lb. cod.
10. 5 lb. cod.
11. 4 lb. flounder.
12. 6 lb. haddock.
13. 2 lb. flounder.
14. 1\( \frac{1}{2} \) lb. flounder (call the cost of \( \frac{1}{2} \) lb. flounder 6 cents)
15. 2\( \frac{1}{2} \) lb. flounder.
16. 7 lb. haddock.
17. 8 lb. cod.
18. 10 lb. cod.
19. 3 lb. bluefish.
20. 4\( \frac{1}{2} \) lb. haddock.
21. 5\( \frac{1}{2} \) lb. haddock.

The prices were:
Flounder, 11¢ per lb.
Haddock, 12¢ per lb.
Bluefish, 14¢ per lb.
Cod, 15¢ per lb.

22. 9 lb. haddock.
23. 7 lb. haddock.
24. 5 lb. bluefish.
25. 7 lb. flounder.
26. 4 lb. bluefish.
27. 4\( \frac{1}{2} \) lb. bluefish.
28. 8 lb. haddock.
29. 8 lb. flounder.
30. 6 lb. flounder.
31. 1\( \frac{1}{2} \) lb. cod (call the cost of \( \frac{1}{2} \) lb. cod 8 cents).
32. 2\( \frac{1}{2} \) lb. cod.
33. 4\( \frac{1}{2} \) lb. cod.

Find the products:

Do section 71 again. Do all the first column first. Then do the second column, then the third, and so on.
72. A Christmas Party

It is Christmas time and the children are getting ready to give a Christmas party.

1. They plan to cut out 100 gold stars. The teacher says: "I will make one for a sample. You make the rest." There are 33 children. How many stars should each child make?

2. They wish to make 12 paper chains, each chain to have 50 links. The teacher makes 6 links for samples. They make the rest. How many links should each child make?

3. They find that they can make 72 links from a large sheet of paper. How many links will 9 sheets make?

4. If they use 9 sheets how many links can they spoil and still have 600 for chains?

5. 16 of the children divide equally the work of making eight dozen cornucopias. How many should each of the 16 children make?

6. 4 of the big boys go to the woods to get evergreens. The other 13 children help the teacher write invitations. How many will they write in all if each child writes 7? If each child writes 8? If each child writes 9? If each child writes 10?
1. Tell the missing numbers:

<table>
<thead>
<tr>
<th>A.</th>
<th>B.</th>
<th>C.</th>
</tr>
</thead>
<tbody>
<tr>
<td>30¢ = ... X 6¢</td>
<td>25¢ = ... X 5¢</td>
<td>16¢ = ... X 2¢</td>
</tr>
<tr>
<td>24¢ = ... X 8¢</td>
<td>21¢ = ... X 3¢</td>
<td>35¢ = ... X 7¢</td>
</tr>
<tr>
<td>50¢ = ... X 10¢</td>
<td>$1.25 = ... X 25¢</td>
<td>$1.75 = ... X 25¢</td>
</tr>
<tr>
<td>50¢ = ... X 25¢</td>
<td>$2.00 = ... X 25¢</td>
<td>96¢ = ... X 12¢</td>
</tr>
<tr>
<td>75¢ = ... X 25¢</td>
<td>40¢ = ... X 8¢</td>
<td>$1.08 = ... X 12¢</td>
</tr>
<tr>
<td>$1.00 = ... X 10¢</td>
<td>75¢ = ... X 15¢</td>
<td>$1.44 = ... X 12¢</td>
</tr>
<tr>
<td>$1.00 = ... X 25¢</td>
<td>$1.50 = ... X 25¢</td>
<td>$1.50 = ... X 15¢</td>
</tr>
<tr>
<td>$25.00' = ... X $5.00</td>
<td>45¢ = ... X 15¢</td>
<td>$ .60 = ... X 12¢</td>
</tr>
<tr>
<td>$20.00 = ... X $5.00</td>
<td>90¢ = ... X 15¢</td>
<td>$ .80 = ... X 10¢</td>
</tr>
<tr>
<td>$40.00 = ... X $5.00</td>
<td>60¢ = ... X 15¢</td>
<td>$1.00 = ... X 20¢</td>
</tr>
</tbody>
</table>

2. Read columns A, B, and C again, saying, “6 cents is contained in 30 cents five times”; “8 cents is contained in 24 cents three times,” etc.

3. Read them again, saying, “30 cents divided into 6-cent amounts will make five of them”; “24 cents divided into 8-cent amounts will make 3 of them,” etc.

4. Read them again, saying, “For 30 cents you can buy five 6-cent articles.” “For 24 cents you can buy three 8-cent articles,” etc.

5. Read them again, saying, “If you save 6¢ a week, it will take you five weeks to save 30 cents.” “If you save 8 cents a week, it will take you three weeks to save 24 cents,” etc.

(With pencil)

6. What will food for 408 boys cost at $2.09 per boy?

7. What will food for 605 men cost at $3.06 per man?

8. What will 809 tickets cost at $7.05 each?
1. John wishes to earn $17.25 to buy a bicycle. He can get $.75 a week for working at the store. In how many weeks can he earn enough to buy the bicycle?

2. Mary, who is in high school, earns $14.00 every month by working evenings. In how many months will she earn enough to buy a typewriter for $70.00?

75|1725 The quotient means weeks. 14|70 The quotient means months.

To find out how many times a certain amount of money is contained in some other amount of money, write both amounts as cents or write both amounts as dollars. Then divide.

On Booster Day the stores will sell any 25-cent article for 19¢.

3. How many 25-cent articles can be bought on Booster Day for 75¢? How many cents will be left over?

4. How many can you buy for $1.25, and how many cents will you have left over?

5. How many for $1.00? 6. For $4.50? 7. For $4.75? 8. For $2.50?

The stores sell any 50-cent article for 39¢ on Booster Day.

9. How many 50-cent articles can be bought for $1.00, and how many cents will be left over?

10. For $2.50? 11. For $8.75? 12. For $5.00? 13. For $1.25?

14. In how many weeks can you save $21.00, if you save 12¢ per week? 15. If you save 25¢ per week? 16. 28¢ per week? 17. 75¢ per week?
1. State the missing numbers:

1 lb. = ... oz. 1 bu. = ... qt. 4 pk. = ... qt.
2 lb. = ... oz. 2 bu. = ... qt. 2 pk. = ... qt.
\(\frac{1}{2}\) lb. = ... oz. 3 bu. = ... qt. 1 pk. = ... qt.
4 lb. = ... oz. \(\frac{1}{2}\) bu. = ... qt. \(\frac{1}{2}\) pk. = ... qt.
\(\frac{1}{4}\) lb. = ... oz. \(\frac{1}{4}\) bu. = ... qt. \(\frac{1}{4}\) pk. = ... qt.
\(\frac{1}{8}\) lb. = ... oz. \(\frac{1}{8}\) bu. = ... qt. \(\frac{1}{8}\) pk. = ... qt.

2. What part of a pound = 4 ounces? 8 oz.? 2 oz.?
3. What part of a peck = 1 qt.? 2 qt.? 4 qt.?
4. What part of a bushel = 16 qt.? 8 qt.? 4 qt.?
5. What part of a bushel = 1 pk.? 2 pk.? \(\frac{1}{4}\) pk.?

6. State the missing numbers:

A. B. C.
6 ft. = ... in. 1 yd. = ... in. \(\frac{1}{4}\) lb. = ... oz.
4 ft. = ... in. \(\frac{1}{2}\) yd. = ... in. \(\frac{3}{4}\) lb. = ... oz.
3 ft. = ... in. \(\frac{1}{4}\) yd. = ... in. \(\frac{1}{4}\) pk. = ... qt.
2 ft. = ... in. \(\frac{3}{4}\) yd. = ... in. \(\frac{3}{4}\) pk. = ... qt.
\(\frac{1}{2}\) ft. = ... in. \(\frac{1}{4}\) yd. = ... in.
\(\frac{1}{3}\) ft. = ... in. \(\frac{1}{2}\) hr. = ... min. \(\frac{3}{4}\) yd. = ... in.
\(\frac{1}{4}\) ft. = ... in. \(\frac{1}{4}\) hr. = ... min. \(\frac{1}{4}\) bu. = ... qt.
\(\frac{1}{6}\) ft. = ... in. \(\frac{3}{4}\) hr. = ... min. \(\frac{3}{4}\) bu. = ... qt.

7. What part of a foot = 6 in.? 4 in.? 3 in.? 2 in.?
8. What part of a yard = 9 in.? 18 in.? 12 in.?
9. What part of an hour = 15 min.? 30 min.? 45 min.?
10. What part of a dollar = 25¢? 50¢? 75¢?
11. What part of 40 is 8? 5? 20? 10?
12. What part of 60 is 10? 15? 20? 30?
76. Finding Costs

1. Supply the missing numbers:

A. 3 pk. = . . qt. 2½ ft. = . . in. 2½ hr. = . . min.
   3½ pk. = . . qt. 2¼ ft. = . . in. 2¼ hr. = . . min.
   1½ pk. = . . qt. 4½ ft. = . . in. 2¾ hr. = . . min.

B. . . . .

C. . . . .

D. At 20¢ per lb., ¼ lb. candy costs . . . .¢. ¾ lb.
   costs . . . .¢.

E. At 30¢ per doz., 1½ doz. oranges cost . . . .¢.
   2½ doz. cost . . . .¢.

F. At 40¢ per pk., ½ pk. apples cost . . . .¢. 1½ pk.
   cost . . . .¢.

G. At 16¢ per lb., ½ lb. pepper costs . . . .¢. ¾ lb.
   costs . . . .¢.

H. At 32¢ per lb., ¾ lb. butter costs . . . .¢. ⁵⁄₈ lb.
   costs . . . .¢.

I. At 48¢ per yd., 1½ yd. cloth cost . . . .¢. ⁷⁄₈ yd.
   costs . . . .¢.

Chicken is 24¢ per lb. Turkey is 32¢ per lb.

2. Find the cost of a turkey that weighs 21⅔ lb.

\[
\begin{array}{c}
32 \\
\times 21\frac{3}{6} \\
\hline
64 \\
672 \\
\hline
6.84
\end{array}
\]

First multiply $3.32 by 21. Then add \(\frac{3}{6}\) of 32. Put $ and a decimal point where they belong.

3. Find the cost of—

a. 7¾ lb. chicken. b. 13¾ lb. turkey. c. 9¾ lb. turkey.

d. ¼ lb. chicken. e. 16¾ lb. turkey. f. 6¾ lb. chicken.

g. 3¾ lb. chicken. h. 12¾ lb. turkey. i. 19¾ lb. turkey.
1. There are 196 lb. flour in one barrel. How many pounds are there in \( \frac{1}{4} \) barrel? 2. In \( \frac{1}{8} \) barrel? 3. In \( \frac{1}{2} \) barrel? 4. In 5 barrels? 5. 1\( \frac{1}{2} \) barrels? 6. There are 1760 yd. in one mile. How many yards equal \( \frac{1}{2} \) mile? 7. \( \frac{1}{4} \) mile? 8. Three quarters of a mile? 9. One eighth of a mile? 10. 2 miles? 11. A mile and a half? 12. How many feet are there in a mile? 13. In 3 miles? 14. In \( \frac{1}{6} \) mi.? 15. In a mile and a quarter?

78.

1. Find \( \frac{3}{8} \) of 144. 2. \( \frac{3}{8} \) of 192. 3. \( \frac{5}{8} \) of 2000. 4. \( \frac{3}{4} \) of 5280. 5. Find \( \frac{3}{8} \) of 640. 6. \( \frac{7}{8} \) of 128. 7. \( \frac{3}{4} \) of $5.00. 8. \( \frac{3}{8} \) of $24.88. 9. Find \( \frac{1}{2} \) of $12.96. 10. \( \frac{1}{3} \) of $12.96. 11. \( \frac{2}{3} \) of $12.96. 12. \( \frac{3}{8} \) of $12.96. 13. Multiply 144 by 3\( \frac{1}{2} \). 14. By 2\( \frac{1}{4} \). 15. By 14\( \frac{3}{4} \). 16. By 4\( \frac{5}{8} \). 17. Multiply 640 by 7\( \frac{3}{4} \). 18. By 36\( \frac{1}{4} \). 19. By 19\( \frac{1}{4} \).

79. At the Butcher Shop

Will helped his father in the store one Saturday. These were the prices per pound of the meats he sold:

<table>
<thead>
<tr>
<th>Sirloin steak, 28¢</th>
<th>Loin chops, 32¢</th>
<th>Salt Pork, 16¢</th>
</tr>
</thead>
<tbody>
<tr>
<td>Round steak, 24¢</td>
<td>Shoulder of lamb, 16¢</td>
<td>Bacon, 22¢</td>
</tr>
<tr>
<td>Chuck steak, 14¢</td>
<td></td>
<td>Ham, 20¢</td>
</tr>
<tr>
<td>Rib roast, 20¢</td>
<td></td>
<td>Sausage, 18¢</td>
</tr>
</tbody>
</table>
Will you find the correct cost for each of these orders. Can you do as well? Write the answers:

1. 2½ lb. sirloin steak.
2. 7¼ lb. rib roast.
3. 1½ lb. bacon.
4. ¾ lb. ham.
5. 3½ lb. chuck steak.
6. ½ lb. salt pork.
7. ½ lb. round steak.
8. 5¼ lb. shoulder of lamb.
9. 1¾ lb. sirloin steak.
10. 6¼ lb. ham.
11. 2½ lb. sausage.
12. ½ lb. bacon.
13. ¾ lb. round steak.
14. 8¼ lb. rib roast.
15. 1¼ lb. sirloin steak.
16. 6¾ lb. shoulder of lamb.
17. 4½ lb. bacon.
18. ¾ lb. salt pork.
19. 1½ lb. sausage.
20. 3¾ lb. sirloin steak.
21. 3¼ lb. salt pork.
22. 2¼ lb. round steak.
23. 2½ lb. chuck steak.
24. ½ lb. ham.
25. 1¾ lb. salt pork.
26. ¾ lb. loin chops.
27. 4¾ lb. shoulder of lamb.
28. ½ lb. sausage.
29. 2½ lb. bacon.
30. 1¾ lb. ham.

31. State the products:
   \[ 2\frac{1}{2} \times 12 = \ 5\frac{3}{4} \times 12 = \ 4\frac{3}{4} \times 12 = \ 2\frac{1}{3} \times 12 = \]
   \[ 1\frac{1}{6} \times 40 = \ 3\frac{3}{4} \times 40 = \ 3\frac{3}{4} \times 36 = \ 4\frac{3}{8} \times 15 = \]

80. Long Division and Multiplication

1. Find \( \frac{1}{6} \) of 240. (16\underline{240}) Check by multiplying the quotient by the divisor.
2. Find \( \frac{1}{25} \) of 9825. Check by multiplying the quotient by the divisor.
3. Find \( \frac{1}{16} \) of 3744. 4. Find \( \frac{1}{25} \) of 6475.

Divide each of these numbers by 73. If your work is all right there will be no remainders.

5. 6. 7. 8. 9.
   15,768 30,441 45,844 22,849 54,896
Find the quotients and remainders:

10. $38 \overline{1875}$ Is 5 or 4 right as the first figure in the quotient?
11. $67 \overline{2512}$ Is 3 or 4 right as the first figure in the quotient?
12. $29 \overline{2018}$ Do you think of 29 as about 20 or as about 30?
13. $58 \overline{1675}$ Do you think of 58 as about 50 or as about 60?

14. $36 \overline{917}$  15. $28 \overline{500}$  16. $45 \overline{810}$  17. $54 \overline{1192}$
18. $28 \overline{725}$  19. $47 \overline{900}$  20. $23 \overline{460}$  21. $69 \overline{215}$

81.

22. How many quarts are there in 28 bushels?
23. How many weeks will it take Nell to save $2.75 if she saves 15 cents a week?
24. How many tickets at 35 cents each must Alice sell to make $10.50 in all?
25. If Fred earns 75 cents a week, how many weeks will it take him to earn $15.00?
26. At the rate of 35 miles per hour, how many hours will it take a train to go 175 miles?

Find the products:

<table>
<thead>
<tr>

1. Mr. Russell receives 60¢ per qt. for his cream. How much does he receive for 19$\frac{3}{4}$ qt. cream sold Jan. 1 to 7?

\[
\begin{align*}
\text{\$60} & \quad \text{Multiply \$60 by 19} \\
\frac{19\frac{3}{4}}{} & \quad \text{\$540} \\
60 & \quad \text{\$60} \\
\hline
\text{\$11.40} & \quad \text{Then add \$45 of \$60} \\
.45 & \quad \text{\$11.85}
\end{align*}
\]

2. How much does he receive for 18$\frac{1}{2}$ qt. cream sold Jan. 8 to 14?

3. How much does he receive for 16$\frac{3}{4}$ qt. cream sold Jan. 15 to 21?

4. How much does he receive for 17$\frac{1}{4}$ qt. cream sold Jan. 22 to 28?

5. One month he did not deliver the cream himself, but sold it at his farm for 52¢ per qt. How much did he receive for 61$\frac{1}{4}$ qt. at 52¢?

Last summer he sold fresh unsalted butter for 48¢ per pound and salted butter for 34¢ per pound.

6. He sold Mrs. Lewis 13$\frac{3}{4}$ lb. unsalted butter. How much should Mrs. Lewis pay?

7. He sold Mrs. Howard 26$\frac{1}{2}$ lb. salted butter. How much should Mrs. Howard pay?

8. He sold Mrs. Edwards 17$\frac{1}{4}$ lb. unsalted butter and 31$\frac{1}{2}$ lb. salted butter. How much should Mrs. Edwards pay in all?

9. Mrs. Williams had 7$\frac{1}{4}$ lb. unsalted butter and 18$\frac{1}{2}$ lb. salted butter. How much should she pay in all?
1. State the product of each pair of numbers:

<table>
<thead>
<tr>
<th>A</th>
<th>B</th>
<th>C</th>
<th>D</th>
</tr>
</thead>
<tbody>
<tr>
<td>10 × 2</td>

87. Buying in Quantity

These are a grocer’s prices for certain things by the dozen and for a single one. He sells a half dozen at half the price of a dozen. Find out how much you save by buying 6 all at one time instead of buying them one at a time.

1. Evaporated Milk $1.00 $0.09
2. Puffed Rice . . . . 1.60 .14
3. Puffed Wheat . . . 1.10 .10
4. Canned Soup . . . 1.90 .17
5. Sardines . . . . . 1.80 .16
6. Beans (No. 2 cans) 1.50 .13
7. Pork and Beans . 1.70 .15
8. Peas (No. 2 cans) 1.40 .12
9. Tomatoes (extra cans) . . . . 3.20 .28
10. Ripe olives (qt. cans) . . . . 7.20 .65

11. The prices for P. and T.

olive oil are:

1-gal. can . . . . . . $3.25
1/2-gal. can . . . . . . 1.75
1/4-gal. can . . . . . . .95
1/8-gal. can . . . . . . .50

Compare the cost of a gallon of olive oil when you buy it in a gallon can, in half-gallon cans, in quarter-gallon cans, and in cans holding one eighth of a gallon.

12. Vanilla extract is sold at 26¢ for a 2-oz. bottle, 50¢ for a 4-oz. bottle, $1.95 for a bottle containing 1 pt., and $3.80 for a bottle containing 1 qt. What is the price per pound when you buy it in 2-oz. bottles? When you buy it in quart bottles (counting 1 pt. as a pound)?

13. Make two other problems about buying vanilla extract in quantity.

14. Find the cost per pound for prunes at $2.75 for 25 lb. 15. At 4 lb. for 50¢.

16. Find the cost of strawberries at 3 boxes for 50¢.

17. How many boxes would you give for $1.00 at that price?
1. Last summer John used to hunt for golf balls every day. One morning he found four. He sold one for 25¢, one for 20¢, one for 15¢, and one for 10¢. What was the average amount he received for one golf ball?

2. That afternoon he found five more and sold 3 for 15¢ each and 2 for 10¢ each. What was the average amount for one of these five?

3. During the first week he sold 32 golf balls, getting in all $4.50. What was the average amount that he received per ball that week?

4. John's sister Mary picks blueberries and sells them. Monday she sold four quarts at 15¢ per qt. and eight quarts in one lot for $1.00. What was the average amount she received per quart? What do you think $\frac{1}{12}$ of a cent equals — $\frac{1}{2}$¢, $\frac{1}{3}$¢, or $\frac{1}{4}$¢?

5. Wednesday she sold 4 qt. at 2 qt. for 25¢, and 7 qt. for 15¢ per quart. What was the average price she received per qt. on Wednesday?

6. In August she sold 215 qt. berries, receiving in all $27.95. What was the average price per qt.?

7. Mary reckons that she spent 142 hours in picking the 215 quarts of berries, 18 hours in sorting them, and 26 hours in going to people's houses to sell them. How much did she receive on the average per hour of time spent?

8. She bought six dresses, one for $.98, two for $1.08 each, two for $1.29 each, and one for $2.31. What was the total cost of the six? What was the average cost per dress?
1. Mary plans to buy material for four curtains for her room. This is her plan for one of the curtains. How many yards of material 36 in. wide will she need for all four curtains?

2. What will the material cost at 13¢ per yd.? At 16¢ per yd.? At 21¢ per yd.? At 28¢ per yd.?

3. John plans to buy some full-sized carpenter’s tools. He wants a saw, a plane, and a level at $1.25 each; a hatchet, a hammer, and a mallet at 46¢ each; 3 chisels at 24¢, 38¢, and 42¢; and a brace and bit set for $2.25. How much will it cost for all, adding 63¢ for freight?

4. At the lumber yard John found a pile of 10-inch boards of odd lengths and bought them for 15¢ per board. There were 163 of them. How much did John pay for the lot?

5. He bought 36 pieces of lumber, each 2 inches by 4 inches on the end and of different lengths, for $4.50. What was the average cost per piece? What part of a cent do you think $\frac{3}{4}$ is?
You can add and subtract and multiply and divide with the largest numbers that there are in just the same way as you have been doing.

Add and write the sums:

<table>
<thead>
<tr>
<th></th>
<th>1</th>
<th>2</th>
<th>3</th>
<th>4</th>
<th>5</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>41521</td>
<td>73125</td>
<td>2871</td>
<td>47536</td>
<td>1265</td>
</tr>
<tr>
<td></td>
<td>23534</td>
<td>82415</td>
<td>312</td>
<td>813</td>
<td>3291</td>
</tr>
<tr>
<td></td>
<td>61523</td>
<td>21345</td>
<td>91654</td>
<td>2492</td>
<td>71425</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td>34298</td>
<td>91235</td>
<td>82380</td>
</tr>
</tbody>
</table>

6. Add and write the sum:

\[
\begin{align*}
214 & \quad \text{(two hundred fourteen ones)} \\
214,000 & \quad \text{(two hundred fourteen thousands)} \\
214,000,000 & \quad \text{(two hundred fourteen millions)}
\end{align*}
\]

7. We read 158,394 in words as one hundred fifty-eight thousand three hundred ninety-four.

8. Read in words: 325,675. 325,142,325.

9. Write in words:

\[
\begin{align*}
5000 & \quad 5137 \\
9000 & \quad 9275 \\
16,000 & \quad 16,423 \\
58,000 & \quad 158,000 \\
296,000 & \quad 296,452 \\
214,561 & \\
\end{align*}
\]

10. Write in numbers:

Fourteen million six hundred seventeen thousand three hundred fourteen. Sixty million sixteen thousand five hundred forty.

11. How many thousands are there in a million?

12. How many ones or units are there in 100 × 100?

13. How many hundreds are there in 100,000?

14. How many hundreds are there in one thousand?

\[
\begin{align*}
1 \text{ thousand} & = 10 \text{ hundreds or 1000 ones} \\
1 \text{ million} & = 1000 \text{ thousands}
\end{align*}
\]
91. Very Large Numbers

1. How many seconds are there in a minute? In an hour? In 24 hours?
2. There are 5280 ft. in a mile. How many inches is that?
3. How many inches are there in 75 miles?
4. How many ounces are there in a ton?
5. Tell something that you think weighs 100,000 lb.
6. Tell something that you think weighs 1,000,000 lb.
7. Tell something that you think costs as much as $10,000,000.

92.

1. Estimate what the product of $4261 \times 3524$ will be. Will it be about a hundred thousand or about a million or about ten million or about a hundred million?
2. Estimate the total weight in pounds of a train of thirty-six empty freight cars. Find the true weight, counting each car as 35,000 lb.
3. How near was your estimate?
4. Which do you think will be larger, 31 miles or 159,768 feet? Guess how much larger.
5. Which really is larger? How much larger?
6. The children guessed how many square inches there were in the floor of the big hall in the Lincoln School. Mary guessed 575,000, Kate guessed 575,250, Grace guessed 666,666, Alice guessed 615,750. The right answer was 762,048. How near was Mary's estimate? Kate's? Grace's? Alice's?
7. Which do you think will be larger, \(9135 \times 2143\) or \(4712 \times 4831\)?

8. Which is larger? How much larger?

9. Alice gave this problem: "Which is larger, a dozen dozen dozen or a hundred dozen dozen? How much larger?" Find the right answer.

10. Fred gave this one: "Which is larger, 456,654 or 456 \times 654? How much larger?" Find the right answer.

11. Helen gave this one: "How many hundred hundreds are there in a thousand thousands?" Find the right answer.

12. How many miles equal 528,000 feet?

13. How many pounds equal a thousand tons?

14. What is the largest number that you can write with six figures?

15. How much is \(100 \times 100?\) \(1000 \times 1000?\)

16. How many hundred thousands are there in a million?

17. Make problems about 1 million. About 10 million.

93.

Find the quotients and remainders.

\[
\begin{array}{c}
312 | 970,612 \\
421 | 500,325 \\
513 | 800,250 \\
291 | 600,575 \\
\end{array}
\]

Check your results for 1, 2, 3, and 4. Find the product of the divisor and quotient and add the remainder.
Find the quotients and remainders:

1. \[ \begin{array}{c|c}
75 & 2273189 \\
-225 & -225 \\
231 & \\
-225 & -225 \\
689 & \\
-675 & \\
14 & \\
\end{array} \]

Think "There are three 75s in 227." Write the 3 and the 225.

Think "There is not even one 75 in 23." Write the 0.

Think "There are three 75s in 231." Write the 3 and the 225.

Think "There is not even one 75 in 68." Write the 0.

Think "There are nine 75s in 689." Write the 9 and the 675.

2. \[ \begin{array}{c|c}
15 & 4612,612 \\
-27 & -27 \\
280,938 & \\
-14 & \text{[omitted]} \\
2918 & \\
-2918 & \text{[omitted]} \\
9300 & \text{[omitted]} \\
\end{array} \]

Check your results to 2, 3, 4, and 5 by finding the product of the divisor and quotient and adding the remainder to it.

6. \[ \begin{array}{c|c}
25 & 2005009 \\
-25 & -25 \\
50125225 & \\
-50125225 & \text{[omitted]} \\
125 & \text{[omitted]} \\
-125 & \text{[omitted]} \\
225 & \text{[omitted]} \\
-225 & \text{[omitted]} \\
125 & \text{[omitted]} \\
-125 & \text{[omitted]} \\
225 & \text{[omitted]} \\
-225 & \text{[omitted]} \\
225 & \text{[omitted]} \\
\end{array} \]

Think "There are two 25s in 50." Write the 2 and the 50.

There is not even one 25 in 1. Write 0.

There is not even one 25 in 12. Write 0.

There are five 25s in 125. Write the 5 and the 125.

There is not even one 25 in 2. Write 0.

There is not even one 25 in 22. Write 0.

There are nine 25s in 225. Write the 9 and the 225.

7. \[ \begin{array}{c|c}
15 & 45,135 \\
-18 & -18 \\
36,108 & \\
-36,108 & \text{[omitted]} \\
13 & \text{[omitted]} \\
26,117 & \\
-26,117 & \text{[omitted]} \\
75 & \text{[omitted]} \\
15,225 & \text{[omitted]} \\
\end{array} \]

Check your results to 7, 8, 9, and 10.

Divide each of these numbers by 825. If your work is all correct there will be no remainders.

11. \[ \begin{array}{c}
252,450 \\
\end{array} \]

12. \[ \begin{array}{c}
578,325 \\
\end{array} \]

13. \[ \begin{array}{c}
447,975 \\
\end{array} \]

14. \[ \begin{array}{c}
748,275 \\
\end{array} \]
95. Long Division

1. Divide 536,250 by 825. What will the last figure in the quotient be?

\[
\begin{array}{c}
825|536,250 \\
\underline{4950} \\
4125 \\
\underline{4125}
\end{array}
\]

Think "There is not even one 825 in 0." Write 0 in the quotient over the 0 of 536,250.

2. Divide 975 by 32. What is the quotient and what is the remainder?

\[
\begin{array}{c}
32|975 \\
\underline{96} \\
15
\end{array}
\]

Think "There is not even one 32 in 15." What will you write as the last quotient figure?

Think "There is 15 remainder."

Find the quotients and remainders:

3.  4.  5.  6.  7.  8.

\[
\begin{array}{c}
41|820 \\
23|475 \\
19|400 \\
39|400 \\
25|750 \\
25|5250
\end{array}
\]

Check your answers to 3, 4, 5, 6, 7, and 8.

\[
\begin{array}{c}
15|905 \\
15|610 \\
15|780 \\
16|1632 \\
75|5250 \\
24|492
\end{array}
\]

96.

State the quotients:

1.  2.  3.  4.

\[
\begin{array}{c}
20|40 \\
20|400 \\
20|4000 \\
20|60,000
\end{array}
\]

Think 2|4  Think 2|40  Think 2|400  Think 2|6000

5.  6.  7.  8.

\[
\begin{array}{c}
300|600 \\
300|36,000 \\
300|15,000 \\
4000|80,000
\end{array}
\]

Think 3|6  Think 3|360  Think 3|150  Think 4|80

9.  10.  11.  12.

\[
\begin{array}{c}
50|4200 \\
500|42,000 \\
60|420 \\
6000|42,000
\end{array}
\]
1. Divide 76,500 by 1500.

You may do this just as you have always done. But this is sometimes quicker.*

Reject 00 from both divisor and dividend. Then divide.

\[
\begin{array}{c|c}
51 & 51 \\
1500 & 1500 \\
76500 & 76500 \\
7500 & 75 \\
1500 & 15 \\
1500 & 15 \\
\end{array}
\]

2. Divide 19,200 by 160.

You may do this just as you have always done. But this is sometimes quicker.

Reject one 0 from both divisor and dividend. Then divide.

\[
\begin{array}{c|c}
120 & 120 \\
160 & 160 \\
19200 & 19200 \\
160 & 16 \\
320 & 32 \\
320 & 32 \\
0 & 0 \\
\end{array}
\]

3. George owes $31.20 on his motorcycle. How long will it take him to pay it at $1.95 per week?

4. At $.80 per week?  
5. At $3.90 per week?

6. If he pays $1.30 per week? $1.20 per week?

7. Paul's uncle gave him $12.00 to spend during vacation. How many weeks will it last if Paul spends 75¢ a week?

8. If he spends $1.00 a week?  
9. If he spends $1.20 a week?

*To the Teacher.—The rejection of 0, or of 00, is probably not a good practice except when the quotient is obvious on inspection. The saving of time is very slight. In accounting it is desirable to have the full numbers appear. Save with gifted computers, fewer errors will be made if the full numbers are used. The logic of the procedure when United States money is to be divided is confusing to pupils.
The girls were looking over their report cards. They had marks for Oct., Nov., and Dec. Each girl added all her marks and then divided to find her average.

Here are the marks:

<table>
<thead>
<tr>
<th></th>
<th>Alice Stern</th>
<th></th>
<th>Grace Brown</th>
<th></th>
<th>Nell Adams</th>
</tr>
</thead>
<tbody>
<tr>
<td>R.</td>
<td>90</td>
<td>85</td>
<td>92</td>
<td>75</td>
<td>80</td>
</tr>
<tr>
<td>A.</td>
<td>95</td>
<td>95</td>
<td>90</td>
<td>81</td>
<td>78</td>
</tr>
<tr>
<td>S.</td>
<td>85</td>
<td>80</td>
<td>85</td>
<td>85</td>
<td>85</td>
</tr>
<tr>

<td>85</td>
</tr>
</tbody>
</table>

1. Find the average for each girl.
   Do not write "and 14 remainder." Write 14.
   Do not write "and 7 remainder." Write 17.
2. About how much higher was Alice’s average than Grace’s?
3. Find out exactly how much higher it was if you can.
4. In which month did Alice do best?
5. In which month did Grace do best?
6. In which month did Nell do best?

The marks on the first line are for reading (R). Those on the second line for arithmetic (A). Those on the third line are for spelling (S). Those on the fourth line are for geography (G). W stands for writing. P stands for physiology.

7. Find each girl’s average in reading (R).
8. Find each girl’s average in arithmetic (A).
9. Find each girl’s average in spelling (S).
10. In what subject did Grace beat Alice?
11. In what subject did Nell beat Alice?
George keeps account of how much he earns. In the first quarter last year he earned $13.30. In the second quarter he earned $16.25. In the third quarter he earned $20.65. In the fourth quarter he earned $8.75.

1. How many weeks are there in a quarter of a year? (1 yr. = 52 wk.)

2. What were George's average earnings per week in the first quarter? In the second? In the third? In the fourth?

Remember to put a decimal point in your quotients to show which numbers mean dollars and which numbers mean cents. Do not write "and 3 remainder" or "and 4 remainder." Write $\frac{2}{15}$ and $\frac{4}{15}$.

3. What were his average earnings per week for all four quarters together?

4. George hopes to earn an average of $1.50 per week, next year. How much will that be for the whole year?

5. He has 50 dollars in the savings bank. The bank pays him four cents a year for each dollar. How much does he get a year for letting the bank use his $50?

6. Henry has a regular job as delivery boy for Mr. Peters. He receives $1.60 per week. How much does he receive in 5 weeks? In 10 weeks?

7. He is saving to buy a bicycle that he can get for $15.00. He has $5.40 saved already. How much more must he save to have $15.00?

8. How many weeks will it take him to save the $9.60 if he saves all his pay each week?
1. Is this inch divided into halves or fourths or fifths or sixths (\(\frac{1}{2}\)s or \(\frac{1}{4}\)s or \(\frac{1}{5}\)s or \(\frac{1}{6}\)s)?

2. How is this inch divided?

3. How many ounces = \(\frac{1}{4}\) lb.? \(\frac{1}{2}\) lb.? \(\frac{3}{4}\) lb.? \(1\) lb.?

4. Which of these bolts will fit a hole that is \(\frac{3}{8}\) inch across?

5. Which of them will fit a hole that is \(\frac{1}{4}\) inch across?

6. Which of them will fit a hole that is \(\frac{1}{8}\) inch across?

7. How many \(\frac{1}{8}\) of an inch long do you think each of these lines is? Estimate. Then measure with your rule and see if you were right.

   1 dime = \(\frac{1}{10}\) dollar
   1 cent = \(\frac{1}{10}\) dime
   1 mill = \(\frac{1}{10}\) cent

8. How many dimes = \(\frac{3}{5}\) dollar? 9. How many cents = \(\frac{1}{10}\) dime?

10. Which of these cakes is divided into \(\frac{1}{2}\)s (fifths)?

11. Which is cut into \(\frac{1}{3}\)s (thirds)? Into \(\frac{1}{10}\)s (tenths)?

12. Read each of these numbers. Tell whether it is less than \(\frac{1}{2}\) or equal to \(\frac{1}{2}\) or more than \(\frac{1}{2}\).
1. Draw $\frac{1}{4}$ of a circle.
2. Draw $\frac{2}{3}$ of a circle.
3. Draw $\frac{1}{4}$ of a square inch.
4. Draw $\frac{3}{4}$ sq. in.
   In this picture a square likes this stands for one acre.
5. Which field contains $2\frac{1}{2}$ acres?
6. Which field contains $2\frac{1}{4}$ acres?
7. Which field contains $3\frac{1}{2}$ acres?
8. Which field contains $3\frac{1}{4}$ acres?
9. Which field contains $3\frac{3}{4}$ acres?
10. Which field contains $4\frac{3}{4}$ acres?

102.

1. Mr. Valenti sells oranges at 3 cents apiece, 4 for 10 cents. What is the cost of 1 orange when you buy 4 at a time?
2. What is the cost per article when you get —
   3 for 5¢? 4 for 5¢? 6 for 10¢? 8 for 15¢?
   3 for 10¢? 4 for 10¢? 6 for 25¢? 8 for 25¢?
   3 for 20¢? 4 for 25¢? 6 for 50¢? 2 for a cent?
   3 for 25¢? 4 for 50¢? 8 for 10¢? 3 for a cent?
3. What is the cost per article when you get —
   10 for a cent? 8 for a cent? 6 for 1¢?
   4 for 1¢? 5 for 1¢?
103. Fractions

Numbers like \(\frac{1}{2}, \frac{1}{3}, \frac{1}{4}, \frac{1}{5}, \frac{1}{6}, \frac{1}{7}, \frac{1}{8}\), etc., are called fractions.

Sometimes we write fractions like this: \(\frac{1}{2}, \frac{1}{3}, \frac{2}{3}, \frac{1}{4}, \frac{3}{4}, \frac{1}{6}, \frac{5}{6}, \frac{3}{5}\).

1. Write as many different fractions as you can in 15 minutes. Write them in a column like this:

\[
\begin{align*}
\frac{1}{2} & \\
\frac{1}{3} & \\
\frac{2}{3} & \\
\end{align*}
\]

2. Write words for ten fractions like this:

\(\frac{1}{2}\) means one half
\(\frac{1}{3}\) means one third
\(\frac{2}{3}\) means two thirds

3. Read each of these fractions and tell whether it means more than half a pound or less than half a pound:

\[
\begin{align*}
\frac{1}{6} \text{ lb.} & \quad \frac{15}{16} \text{ lb.} \\
\frac{5}{6} \text{ lb.} & \quad \frac{16}{16} \text{ lb.} \\
\frac{3}{4} \text{ lb.} & \quad \frac{3}{4} \text{ lb.} \\
\frac{5}{10} \text{ lb.} & \quad \frac{7}{10} \text{ lb.} \\
\frac{3}{10} \text{ lb.} & \quad \frac{3}{4} \text{ lb.} \\
\end{align*}
\]

4. Tell which of these fractions mean exactly \(\frac{1}{2}\) lb.:

\[
\begin{align*}
\frac{3}{4} \text{ lb.} & \quad \frac{5}{6} \text{ lb.} \\
\frac{3}{5} \text{ lb.} & \quad \frac{3}{5} \text{ lb.} \\
\frac{3}{6} \text{ lb.} & \quad \frac{3}{3} \text{ lb.} \\
\frac{3}{10} \text{ lb.} & \quad \frac{5}{10} \text{ lb.} \\
\frac{7}{10} \text{ lb.} & \quad \frac{3}{16} \text{ lb.} \\
\frac{3}{16} \text{ lb.} & \quad \frac{9}{16} \text{ lb.} \\
\end{align*}
\]

5. Tell which of these fractions mean exactly \(\frac{1}{4}\) in.

\[
\begin{align*}
\frac{5}{8} \text{ in.} & \quad \frac{3}{8} \text{ in.} \\
\frac{1}{8} \text{ in.} & \quad \frac{4}{16} \text{ in.} \\
\frac{5}{16} \text{ in.} & \quad \frac{3}{8} \text{ in.} \\
\frac{1}{2} \text{ in.} & \quad \frac{1}{2} \text{ in.} \\
\end{align*}
\]
Take your rule.
1. Draw a line $\frac{1}{4}$ in. long. Add $\frac{1}{4}$ in. to it. How long is it now?
2. Draw a line $\frac{1}{4}$ in. long. Add $\frac{1}{4}$ in. to it. How long is it now?
3. Add $\frac{1}{4}$ in. to $\frac{3}{4}$ in. 4. Add $\frac{3}{4}$ in. to $\frac{3}{4}$ in.
5. Add $\frac{3}{4}$ in. to $\frac{3}{4}$ in. 6. Add $\frac{1}{4}$ in. to $\frac{3}{4}$ in.
7. Read and say the sums:

3 yd. and 4 yd. = $\frac{1}{4}$ and $\frac{1}{4}$ =
$\frac{1}{4}$ and $\frac{1}{4}$ =
1 third and 1 third =
C. 2 ft. and 1 ft. =
$\frac{1}{4}$ and $\frac{1}{4}$ =
$\frac{1}{4}$ and $\frac{1}{4}$ =
D. $\frac{1}{4}$ and $\frac{3}{4}$ and $\frac{1}{4}$ =
$\frac{1}{4}$ and $\frac{3}{4}$ and $\frac{1}{4}$ =
$\frac{3}{4}$ and $\frac{3}{4}$ and $\frac{1}{4}$ =
$\frac{3}{4}$ and $\frac{3}{4}$ and $\frac{1}{4}$ =
E. 2 fifths and 1 fifth and 1 fifth =
$\frac{3}{5}$ and $\frac{1}{5}$ and $\frac{1}{5}$ =
$\frac{3}{10}$ and $\frac{3}{10}$ and $\frac{1}{10}$ =
8. Say the sums:

<p>| | | | | | | | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>$\frac{1}{4}$</td>
<td>$\frac{1}{4}$</td>
<td>$\frac{1}{16}$</td>
<td>$\frac{1}{8}$</td>
<td>$\frac{3}{16}$</td>
<td>$\frac{1}{4}$</td>
<td>$\frac{3}{10}$</td>
<td></td>
</tr>
<tr>
<td>$\frac{3}{8}$</td>
<td>$\frac{1}{8}$</td>
<td>$\frac{5}{16}$</td>

</tbody>
</table>

---

Think what to say for four $\frac{1}{2}$-s.
106. Farm Accounts

1. Mary's father sells cream. He keeps account of what he sells, like this:

Quarts of Cream Sold
Jan. 1 to 7
Mon. 3 1/4
Tues. 3
Wed. 3
Th. 2
Fri. 3 1/4
Sat. 3
Sun. 2 1/4

How much did he sell in the week of Jan. 1–7? Add the 1s first.

2. How much did he sell in each of these weeks?

Write 1/2 for 1/4.

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>M. 2</td>
<td>2</td>
<td>2</td>
<td>2 1/4</td>

<td>5/8</td>
<td>1 5/8</td>
</tr>
</tbody>
</table>
Lucy's father sells fresh butter with no salt in it to some of his customers in \( \frac{1}{4} \)-lb. packages.

1. How much do three of these packages contain?
2. How much do five \( \frac{1}{4} \)-lb. packages contain—\( 1\frac{1}{4} \) lb. or \( 1\frac{3}{4} \) lb.?
3. How much do 6 contain? 4. How much do 7 contain—\( 1\frac{1}{4} \) lb. or \( 1\frac{1}{2} \) lb. or \( 1\frac{3}{4} \) lb.?
5. How many \( \frac{1}{4} \)-lb. packages equal 2 lb.?
6. Tell the missing numbers:
\( \frac{1}{4} = 1 \) and \( \frac{3}{4} = \ldots \) \( \frac{1}{4} = 1 \) and \( \frac{3}{4} = 1 \) and \( \frac{1}{4} = \ldots \)
7. One customer takes \( \frac{1}{4} \) lb. every day except Sunday. She takes \ldots \ lb. in a week.
8. One customer takes \( \frac{1}{4} \) lb. Mon., Wed., Thur., and Sat. She takes \ldots \ lb. a week.
9. Lucy adds up the fresh butter sales for her father every week. See if you can add them without making a mistake.

For \( \frac{5}{4} \) think \( 1\frac{1}{4} \). Write \( \frac{1}{4} \). Add the 1.
For \( \frac{6}{4} \) think \( 1\frac{1}{2} \). Write \( \frac{1}{2} \). Add the 1.
For \( \frac{7}{4} \) think \( 1\frac{3}{4} \). Write \( \frac{3}{4} \). Add the 1.

1. _____ This line is \( \frac{3}{4} \) inches long. How much must you add to it to make it 1 inch long?

2. _____ This line is \( \frac{1}{4} \) inch long. How much must you add to it to make it \( \frac{3}{4} \) inch long?

3. _____ This line is \( \frac{1}{6} \) inch long. How much must you add to it to make it \( \frac{1}{3} \) in. long?

4. How much must you add to a line \( \frac{1}{4} \) in. long to make it \( \frac{3}{4} \) in. long?

5. How much must you add to a line \( \frac{1}{6} \) in. long to make it \( \frac{1}{2} \) in. long?

6. How much must you add to a line \( \frac{1}{4} \) in. long to make it 1 in. long?

7. How much must you add to this line _____ to make it \( \frac{3}{4} \) inch long?

8. How much must you add to this line _____ to make it \( \frac{1}{4} \) in. long?

9. How much more is three fourths of a pound than \( \frac{1}{4} \) lb.?

10. How much longer is \( \frac{3}{4} \) mile than \( \frac{1}{4} \) mile?

11. How much longer is \( \frac{3}{4} \) yd. than \( \frac{1}{2} \) yd.?

12. What fraction must you add to the lower fraction to make it equal to the upper fraction?

\[
\begin{array}{cccccccc}
a. & b. & c. & d. & e. & f. & g. \\
\frac{1}{2} & \frac{3}{4} & \frac{1}{6} & \frac{2}{8} & \frac{4}{6} & \frac{3}{4} & \frac{7}{8} \\
\frac{1}{4} & \frac{1}{4} & \frac{1}{6} & \frac{1}{6} & \frac{3}{6} & \frac{1}{2} & \frac{3}{6} \\
\text{Say } \frac{1}{2} \text{ for } \frac{1}{6}. \\
\end{array}
\]

13. What must you add to each of these fractions to make it equal to 1?

Remember that \( 1 = \frac{3}{8} \) or \( \frac{1}{4} \) or \( \frac{3}{8} \).

\[
\frac{1}{2} \quad \frac{5}{8} \quad \frac{1}{4} \quad \frac{3}{8} \quad \frac{1}{6} \quad \frac{3}{4} \quad \frac{3}{8} \quad \frac{1}{8}
\]
1. Dora is making jelly. The recipe calls for 24 cups of sugar and she has only $21\frac{1}{2}$. She has no time to go to the store so she has to borrow the sugar from a neighbor. How much must she get?

\[\begin{align*}
\text{Subtract} \\
24 & \quad \text{Think } \frac{1}{2} \text{ and } \frac{1}{2} = 1. \quad \text{Write } \frac{1}{2}.
\hline
21\frac{1}{2} & \quad \text{Think } 2 \text{ and } 2 = 4. \quad \text{Write the } 2.
\hline
\hline
2\frac{1}{2} &
\end{align*}\]

2. A box full of soap weighs $29\frac{1}{2}$ lb. The empty box weighs $3\frac{1}{2}$ lb. How much does the soap alone weigh?

3. On July 1, Mr. Lewis bought a 50-lb. bag of ice-cream salt. On July 15 there were just $11\frac{1}{2}$ lb. left. How much had he used in the two weeks?

4. Grace promised to pick 30 qt. blueberries for her mother. So far she has picked $18\frac{1}{2}$ qt. How many more quarts must she pick?

Subtract. Write the differences.

\[
\begin{array}{cccccccc}
25 & 75 & 48 & 32 & 36 & 24 & 100 & 50 \\
11\frac{1}{2} & 23\frac{1}{2} & 14\frac{1}{2} & 18\frac{1}{2} & 12\frac{1}{2} & 19\frac{1}{2} & 37\frac{1}{2} & 12\frac{1}{2} \\
\hline
\end{array}
\]

\[
\begin{array}{cccccccc}
62\frac{1}{2} & 58\frac{1}{2} & 37\frac{1}{2} & 87\frac{1}{2} & 64\frac{1}{2} & 37\frac{1}{2} & 87\frac{1}{2} & 37\frac{1}{2} \\
19\frac{1}{2} & 26\frac{1}{2} & 15 & 61\frac{1}{2} & 18 & 21 & 12\frac{1}{2} & 18 \\
\hline
\end{array}
\]

\[

116. Review. Mixed Problems

(Without pencil.)

1. How many postage stamps are there in a sheet 8 stamps wide and 10 stamps long?

2. How many inches long is a yard and a quarter?

3. How many three-quart cans can be filled from 6 gallons of milk?

4. Alice went to sleep at 8 P.M. She woke up at 6 A.M. How many hours did she sleep?

5. What part of a year is 6 months? 3 months? 2 mo.?

6. How many 10-acre fields can be made from ½ sq. mi. or 320 acres?

7. How many ounces equal ¼ lb.? ½ lb.? ¾ lb.?

8. If 1 peck of apples makes 3 quarts of cider, how much cider will 2 bushels of apples make?

9. What is the cost of a cement path 4 ft. wide and 25 ft. long, at 14¢ per sq. ft.?

10. How many seats are there in 9 classrooms, each containing 40 seats?

11. How many inches are there in 2 ft. 8 inches?

12. How many farms of 80 acres each can be made from 1 sq. mi. or 640 acres?

13. George starts to walk 10 miles to his grandfather's house. He walks 7½ miles of the way before lunch. How much farther has he to walk?

14. Dick and Joe had a walking match of 1 hour. Dick walked 5½ miles, Joe walked 4¾ miles. How much farther did Dick go in the hour?

15. On railroad trains a child from 5 to 12 years old pays half the fare for an adult. If the fare for an adult from New York to Chicago is $20, what does a 9-year-old child pay?
16. A rectangular lot containing 3200 sq. ft. is 40 ft. wide. How long is it?
17. If $\frac{1}{8}$ inch stands for 1 foot on a plan of a house, how much will $1\frac{1}{2}$ inch stand for?
18. What part of a yard is 9 inches?
19. What part of a foot is 4 inches?
20. How many weeks will it take John to earn $24 for a bicycle if he earns $2 a week?
21. A blanket is 72 inches long. How many feet long is it?
22. When you get $\frac{1}{4}$ lb. candy for 5 cents, what is the price per pound?
23. What does it cost for a dozen oranges at the rate of 3 for 10¢?

117. Review. Mixed Problems

(With pencil.)

1. One ton equals 2000 lb. How many pounds equal $\frac{5}{8}$ ton?
2. One mile equals 1760 yd. How many yards equal $\frac{1}{4}$ mile?
3. One acre equals 160 square rods. How many square rods are there in each of these fields?
4. If one gallon of paint will paint 160 sq. ft., how many gallons are needed to paint a piazza floor that is 8 ft. by 40 ft.?
5. A barrel full of flour weighs 218$\frac{1}{2}$ lb. The flour weighs 196 lb. How much will the empty barrel weigh?
6. If a short block is 264 ft., how many short blocks make a mile or 5280 ft.?

7. A long block is 880 ft. How many long blocks make a mile?

8. Mr. Roberts bought a horse for $175, a wagon for $115, and a harness for $28. How much did he pay for all?

9. Mr. Gordon bought an automobile for $490, and two extra tires for $16.50 each. How much did he pay in all?

10. How much less did Mr. Roberts pay than Mr. Gordon?

11. A tub full of butter weighs 53\(\frac{3}{8}\) lb. The empty tub weighs 3\(\frac{5}{6}\) lb. How much does the butter weigh?

12. How much is left of a 50-yard piece of gingham
   (a) After 17\(\frac{1}{2}\) yd. are sold?
   (b) After 8\(\frac{1}{2}\) more yards are sold?
   (c) After 5\(\frac{1}{4}\) more yards are sold?

13. How many eggs are required to fill 27 orders for 2 dozen each?

14. How many panes of glass are required for 15 cold-frames like the one in the picture?

15. Which cost more, 7 Jersey cows at $135 each or 9 Holstein cows at $100 each? How much more?
16. Mrs. Howard uses 3 pints of milk a day. How many quarts does she use in 2 weeks?
17. How many slips, each 5 in. by 8 in., can be cut from a sheet of paper 20 in. by 24 in.?
18. A church has 88 pews each seating 5 persons, and 36 pews each seating 4 persons. How many persons can be seated in all?
19. Dick lifted a dumb-bell 34 times. His big brother lifted it a hundred times and said, "That is more than three times as many times as you lifted it." Was he right?
20. How many boxes of apples can be carried in a train of 29 freight cars, if each car holds 360 boxes?
21. At $2.75 a day, how much does Mr. Andrews earn in 26 days?
22. How many days will it take him to earn $33.00?
23. Joe's big brother receives 35¢ an hour for regular work and 55¢ an hour for overtime. How much does he get in a week when he works 48 hr. at regular work and 12 hr. overtime?
24. There are 160 sq. rods in an acre. How many acres are there in this field?
25. At $1.38 per sq. yd., what will it cost for linoleum for a kitchen floor 9 ft. by 12 ft.?
26. How many trees are there in an orchard of 28 rows, with 48 trees in each row?
27. Mr. Norton sold 328 barrels of apples at $2.15 per barrel, and 294 barrels of apples at $2.45 per barrel. How much did he receive in all?
28. At 35 miles per hour, how long will it take a train to go 1085 miles?
29. A special train ran from New York to Albany without stops in exactly 3 hr. The distance is 143 mi. How many miles did the train go per hour?
30. On Mrs. Jones’s birthday Mr. Jones hired an automobile for 3½ hours. How much did it cost at $2.00 an hour? They went 30 miles from 2 till 3:30 p.m. How fast did they go?
31. How many miles per hour is the rate of —
   a. a boy walking 12 miles in 4 hours?
   b. a horse going 56 miles in 14 hours?
   c. an automobile going 162 miles in 9 hours?
   d. a train going 928 miles in 32 hours?
32. How many miles per day is the rate of —
   a. A steamboat going 6048 miles in 18 days?
   b. A caravan going 1000 miles in 25 days?
33. At 250 lb. per barrel, how many barrels of potatoes are there in 15 tons of potatoes of 2000 lb. each?
34. Mount McKinley is 20,300 ft. above the level of the sea. Is that about 3 miles, or about 4 miles, or about 5 miles high?
35. How much change should I receive from a twenty-dollar bill, if I buy three railroad tickets at $2.18 each?
36. Lucy planted 48 seeds. She expected ¾ of them to come up. 35 came up. Was that more or less than she expected?
37. She sold 1½ dozen plants at 3 for 10 cents. How much did she receive?
In one class at the Lincoln School every boy and girl who was well ran 50 yards as fast as he could. The teacher timed them with a stop watch. Here are some of the times in seconds:

<table>
<thead>
<tr>
<th>Boys</th>
<th>Girls</th>
</tr>
</thead>
<tbody>
<tr>
<td>Alfred</td>
<td>Alice</td>
</tr>
<tr>
<td>Arthur</td>
<td>Clara</td>
</tr>
<tr>
<td>Ben</td>
<td>Ella</td>
</tr>
<tr>
<td>Charles</td>
<td>Kate</td>
</tr>
<tr>
<td>Dick</td>
<td>Helen</td>
</tr>
</tbody>
</table>

1. Which boy ran in the shortest time? Who was next? What was the difference between their times?

3. How much over 10 sec. was Alfred’s time? Alice’s? Ella’s? Helen’s?

121.

Find the sums.

Think of $6 \frac{1}{6}$ as $1 \frac{1}{6}$. Write $\frac{1}{6}$ and add the 1 to the ones column.

Think of $8 \frac{3}{6}$ as $1 \frac{3}{6}$. Write $\frac{3}{6}$ and add the 1 to the ones column.

How will you think of $\frac{3}{6}$? Of $1\frac{3}{6}$? Of $1\frac{5}{6}$?

<table>
<thead>
<tr>
<th></th>
<th>1.</th>
<th>2.</th>

<td>53%</td>
<td>113%</td>
</tr>
</tbody>
</table>
1. Count by fifths from 1 to 3, saying, "1 = \(\frac{5}{5}\), \(1\frac{1}{5} = \frac{6}{5}\), \(1\frac{2}{5} = \frac{7}{5}\)," and so on.

2. Read these lines, supplying the missing numbers:
\[
1 = \frac{5}{5} \quad 1\frac{1}{5} = \frac{6}{5} \quad 1\frac{2}{5} = \frac{7}{5} \quad 1\frac{3}{5} = \frac{8}{5}
\]

3. Find the differences in Ex. a, b, c, etc.:

\[
\text{Think of } 1\frac{1}{5} \text{ as } \frac{6}{5}. \quad \text{Think of } 1\frac{2}{5} \text{ as } \frac{7}{5}. \quad \text{How will you think of } 1\frac{3}{5}? \quad \text{Of } 1\frac{4}{5}? \quad \text{Of } 1? \\
\begin{array}{cccccccc}
a. & b. & c. & d. & e. & f. & g. & h.
\hline
1\frac{1}{5} & 1\frac{1}{5} & 1\frac{2}{5} & 1\frac{3}{5} & 1\frac{4}{5} & 1\frac{5}{5} & 1\frac{6}{5} & 1\frac{7}{5} \\
\frac{3}{5} & \frac{4}{5} & \frac{5}{5} & \frac{6}{5} & \frac{7}{5} & \frac{8}{5} & \frac{9}{5} & \frac{10}{5} \\
\end{array}
\]

Check your answers by adding.

4. Alice's time for the 50-yd. race was 10\(\frac{2}{5}\) seconds. Kate's was 8\(\frac{3}{5}\). How much shorter was Kate's time?

\(10\frac{2}{5}\) \(\frac{4}{5}\) is more than \(\frac{3}{5}\). So increase \(\frac{3}{5}\) to \(\frac{7}{5}\).

\(8\frac{3}{5}\) Think "\(\frac{4}{5}\) and \(\frac{3}{5}\) = \(\frac{7}{5}\)." Write \(\frac{3}{5}\). Increase \(8\) to \(9\).

5. Charles's time was 7\(\frac{1}{5}\) sec. Alfred's was 10\(\frac{1}{5}\) sec. How much shorter was Charles's time?

123.

These are the times for some boys running a quarter of a mile. The letters A, B, C, D, E, F, G, H, and I stand for the boys' names.

A. 59\(\frac{3}{5}\)  
B. 60  
C. 62\(\frac{1}{5}\)  
D. 63\(\frac{1}{5}\)  
E. 63\(\frac{3}{5}\)  
F. 67\(\frac{3}{5}\)  
G. 70  
H. 72\(\frac{3}{5}\)  
I. 75\(\frac{3}{5}\)

1. Find the difference between the times of A and B.
2. Of A and C.  
3. A and D.  
4. A and E.  
5. A and H.  
6. A and I.
7. Between the times of B and C. 8. B and D.
11. C and I.
14. D and H.
15. Between the times of E and F. 16. E and G.
17. E and H.
18. Between the times of F and G. 19. F and H.

124.

1. How much must you add to \( \frac{1}{4} \) in. to make 1 in.?
2. To \( \frac{3}{4} \) in. to make 1 in.? To \( \frac{3}{4} \) in. to make 1\( \frac{1}{4} \) in.?
3. How much must you add to each of these fractions to make 1?

\[
\begin{array}{llllllll}
 a. & b. & c. & d. & e. & f. & g. & h. & i. & j. \\
\frac{1}{4} & \frac{3}{4} & \frac{1}{4} & \frac{3}{4} & \frac{1}{4} & \frac{3}{4} & \frac{1}{4} & \frac{3}{4} & \frac{1}{4} & \frac{3}{4} \\
\end{array}
\]

4. Nell and her mother bought a remnant or “left-over” piece of dress goods 6\( \frac{1}{4} \) yd. long. The pattern they used required only 4\( \frac{3}{4} \) yd. How much more cloth did they have than they needed?

\[
\begin{align*}
6\frac{1}{4} & \quad \text{Increase } \frac{1}{4} \text{ to } \frac{5}{4}. \\
4\frac{3}{4} & \quad \text{Think } "\frac{3}{4} \text{ and }... = \frac{5}{4}." \quad \text{Write } \frac{1}{2} \text{ for } \frac{3}{4}. \\
& \quad \text{Increase } 4 \text{ to } 5.
\end{align*}
\]

5. They used 2\( \frac{3}{4} \) yd. from a 5-yd. roll of ribbon. How much was left?

6. Find the differences. Check each result by adding.

\[
\begin{array}{cccccc}
a. & b. & c. & d. & e. & f. \\
15 & 10 & 27\frac{1}{4} & 35\frac{1}{4} & 10 & 10 \\
2\frac{3}{4} & 13\frac{3}{4} & 13\frac{3}{4} & 17\frac{1}{4} & 7\frac{1}{2} & 3\frac{3}{4} & 8\frac{3}{4}
\end{array}
\]
Mr. Stern sells dry goods. Each long piece of cloth in his store has a tag like this. The top number on the left side tells how many yards long the piece of cloth was in the beginning. Every time that a customer buys some of the cloth, Mr. Stern or the clerk writes the number of yards sold on the right-hand side of the tag.

1. How does Mr. Stern find out how much of a piece of cloth he has sold?

2. How does he find out just how much he has left in that piece without spending time in measuring it?

3. Play that you are Mr. Stern. Make a tag for a piece of cloth. Then put numbers on it to show how long it was on Jan. 1, how much you sold, and how much you had left.

### 126. Stock and Sales

1. Find the Jan. total sales, the Feb. 1 stock, the Feb. total sales, and the Mar. 1 stock for Piece No. 401A.

   When you add or subtract with $\frac{1}{2}$, and $\frac{1}{4}$, or $\frac{3}{4}$, you may think of the $\frac{1}{2}$ as $\frac{3}{4}$.

2. Do the same for Piece No. 521A. 3. Do the same for Piece No. 106B. 4. Do the same for Piece No. 211B. 5. For No. 31C. 6. For No. 68C.

</table>
1. Which of these pictures show that \( \frac{1}{4} = \frac{1}{8} \)?

2. Which show that \( \frac{1}{4} = \frac{2}{8} \)?

3. Which show that \( \frac{1}{4} = \frac{1}{8} \)?

4. Find the sums as is shown in the first line.

\[
\begin{align*}
\frac{1}{8} + \frac{1}{8} &= (\frac{1}{8} + \frac{1}{8}) = \frac{1}{8} \text{ or } \frac{1}{8} \\
\frac{1}{8} + \frac{1}{4} &= \frac{1}{8} + \frac{1}{4} \\
\frac{1}{4} + \frac{1}{8} &= \frac{1}{4} + \frac{1}{8} \\
\frac{1}{4} + \frac{1}{4} &= \frac{1}{4} + \frac{1}{4} \\
\frac{1}{8} + \frac{1}{8} &= \frac{1}{8} + \frac{1}{8}
\end{align*}
\]

131. Making Candy

1. Nell and Grace made candy to sell at the fair. They put in 5 lb. sugar, 1 lb. milk, \( \frac{1}{2} \) lb. walnuts, \( \frac{1}{8} \) lb. butter, and \( \frac{1}{4} \) lb. chocolate. How many pounds of materials did they use?

\[
\begin{align*}
\frac{5}{1} \\
\frac{1}{2} \\
\frac{1}{8} \\
\frac{1}{8} \\
\frac{1}{4}
\end{align*}
\]

\[
\text{Think of } \frac{1}{4} \text{ as } \frac{2}{8} \\
\text{Think of } \frac{1}{2} \text{ as } \frac{4}{8}
\]

2. When the candy was made they weighed it. They had just \( 5\frac{1}{4} \) lb. How much of the \( 6\frac{1}{4} \) lb. of materials which they put in had gone off in bubbles or stuck to the kettle?
Find the number of pounds of materials used in each of these recipes. If you need to, think of \( \frac{1}{2} \) as \( \frac{5}{8} \); think of \( \frac{3}{4} \) as \( \frac{9}{8} \).

133. Buying Remnants

Remnants at \( \frac{1}{3} \) to \( \frac{1}{2} \) Regular Prices
Lengths from \( \frac{1}{2} \) yd. to 5 yd.

Ginghams, 8¢ per yd. Sergees, 16¢ per yd. Flannels, 24¢ per yd.

1. Mrs. Andrews bought two pieces of gingham. One was \( 2\frac{3}{8} \) yd.; the other was \( 1\frac{3}{4} \) yd. How many yd. did she buy in all? How much did the gingham cost in all? How much change should she receive from a two-dollar bill?

2. Mrs. Johnson bought three pieces of flannel. One was \( 1\frac{1}{8} \) yd., the second was \( 1\frac{1}{2} \) yd., the third was \( 1\frac{5}{8} \) yd. How many yd. did she buy in all? How much did the flannel cost? How much change should she receive from a two-dollar bill?
Find the total amount of cloth and the cost of each of these purchases:

3. Three serge remnants, 1\(\frac{3}{4}\), 4\(\frac{1}{4}\), and 1\(\frac{2}{8}\) yd. long.
4. Four gingham remnants, 2\(\frac{1}{8}\), 3\(\frac{1}{4}\), 4\(\frac{1}{4}\), and 2\(\frac{2}{4}\) yd. long.
5. Four serge remnants, 1\(\frac{1}{4}\), 1\(\frac{2}{4}\), 2\(\frac{3}{4}\), and 3\(\frac{1}{8}\) yd. long.
6. Four flannel remnants, 1\(\frac{5}{8}\), 2\(\frac{3}{8}\), 2\(\frac{3}{4}\), and 4\(\frac{1}{8}\) yd. long.

134.

1. James and Fred are making a canvas canoe. The book says that 12\(\frac{1}{2}\) yd. are required to make a canoe of the size that they wish. They have a piece 8\(\frac{3}{8}\) yd. long. How many yd. more do they need? (Think of \(\frac{1}{2}\) as \(\frac{5}{8}\).)

2. Fred's older brother is making a larger canoe that requires 17\(\frac{1}{2}\) yd. of canvas. He has one 10-yd. piece and a remnant 5\(\frac{1}{4}\) yd. long. How much more does he need?

3. How much must you add to 4\(\frac{3}{4}\) yd. to have 6\(\frac{7}{8}\) yd.?
4. How much must you add to 5\(\frac{1}{2}\) yd. to have 10\(\frac{3}{4}\) yd.?
5. How much must you add to 6\(\frac{1}{2}\) to have 9\(\frac{5}{8}\)?

135.

Subtract. State the differences:

<table>

137. Weighing the Baby

The baby and the baby carriage weigh \(38\frac{1}{8}\) lb.
The baby carriage without the baby weighs \(14\frac{1}{2}\) lb.
How much does the baby weigh?

\[ 33 \frac{1}{8} \quad \text{Think} \quad \frac{1}{8} = \frac{4}{8}, \quad 1 \frac{1}{8} = \frac{9}{8}. \]
\[ 14 \frac{1}{2} \quad \text{Think} \quad \frac{4}{8} \text{ and } \frac{5}{8} = \frac{9}{8}. \]
\[ 23 \frac{5}{8} \quad \text{Write} \quad \frac{5}{8}. \quad \text{Increase the 4 of 14 to 5.} \]

*Check your result by adding 23\(\frac{5}{8}\) and 14\(\frac{1}{2}\).*

Nell’s baby sister weighed 7\(\frac{3}{8}\) lb. when it was born and 9\(\frac{1}{4}\) lb. when it was a month old. How much did it gain in the first month?

\[ 9 \frac{1}{4} \quad \text{Think} \quad 1 \frac{1}{4} = \frac{10}{8}. \]
\[ 7 \frac{3}{8} \quad \text{Think} \quad \frac{3}{8} \text{ and } \ldots = \frac{10}{8}. \]
\[ \text{Write} \quad \frac{7}{8}. \quad \text{Increase the 7 to 8.} \]

*Check your result by adding.*

This table of numbers tells what Nell’s baby sister Mary weighed every two months from the time she was born till she was a year old.

<table>
<thead>
<tr>
<th>Weight of Mary Adams</th>

<td>19(\frac{1}{4}) lb.</td>
</tr>
<tr>
<td>At 12 months</td>
<td>23(\frac{1}{8}) lb.</td>
</tr>
</tbody>
</table>

Gain from 0 to 2 months =
Gain from 2 to 4 months =
Gain from 4 to 6 months =
Gain from 6 to 8 months =
Gain from 8 to 10 months =
Gain from 10 to 12 months =

8. Copy this table of gains. Find what the numbers are for each space in the table and put them in.

9. Make a table of gains like it for the Adams baby from your answers to 1, 2, 3, 4, 5, and 6 on page 233.

10. Make and solve problems about which baby weighed the most and gained the most.

138.

When you add or subtract with \(\frac{1}{2}\)s and \(\frac{1}{3}\)s, or with \(\frac{1}{2}\)s and \(\frac{1}{6}\)s, or with \(\frac{1}{3}\)s and \(\frac{1}{6}\)s, think of \(\frac{1}{2}\) as \(\frac{3}{6}\), \(\frac{1}{3}\) as \(\frac{2}{6}\), \(\frac{2}{3}\) as \(\frac{4}{6}\).

Find the sums:

\[
\begin{array}{cccccccccc}
\frac{1}{3} & \frac{2}{3} & \frac{1}{3} & \frac{5}{6} & \frac{1}{6} & \frac{1}{2} & \frac{1}{2} & \frac{5}{6} & \frac{4}{5} & \frac{3}{4} \\
\frac{1}{2} & \frac{1}{2} & \frac{1}{6} & \frac{1}{3} & \frac{1}{3} & \frac{5}{6} & \frac{1}{6} & \frac{2}{3} & \frac{2}{3} & \frac{3}{6} \\
\frac{5}{6} & \frac{2}{3} & \frac{1}{3} & \frac{1}{6} & \frac{2}{3} & \frac{1}{2} & \frac{1}{6} & \frac{3}{2} & \frac{2}{5} & \frac{4}{3} \\
\frac{1}{2} & \frac{1}{6} & \frac{5}{6} & \frac{1}{2} & \frac{5}{6} & \frac{2}{3} & \frac{2}{3} & \frac{2}{1} & \frac{5}{2} & \frac{2}{5} \\
\end{array}
\]
139.

Read these lines, supplying the missing numbers:
A. \( \frac{1}{2} = 1 \quad \frac{1}{6} = \frac{1}{6} \quad \frac{2}{3} = \frac{1}{3} \text{ or } \frac{1}{2} \quad \frac{1}{4} = \frac{1}{2} \text{ or } \frac{1}{3} \)
B. \( 1 \frac{1}{6} = \frac{1}{6} \quad 1 \frac{1}{8} = \frac{1}{8} \quad 1 \frac{1}{4} = \frac{1}{4} \text{ or } \frac{1}{2} \)
C. \( 1 \frac{1}{3} = \frac{1}{3} \text{ or } \frac{1}{2} \quad 1 \frac{1}{6} = \frac{1}{6} \text{ or } \frac{1}{2} \quad 1 \frac{1}{8} = \frac{1}{8} \text{ or } \frac{1}{3} \)

Find the differences. Think of \(1 \frac{1}{6}\) as \(\frac{1}{6}\), \(1 \frac{1}{3}\) as \(\frac{1}{3}\), \(1 \frac{1}{2}\) as \(\frac{1}{2}\).

\[
\begin{array}{cccccccccc}
\frac{5}{6} & \frac{2}{3} & \frac{1}{3} & \frac{2}{3} & \frac{5}{6} & \frac{5}{6} & \frac{5}{6} & 1\frac{1}{6} & 1\frac{1}{3} & 1\frac{1}{2} \\
\frac{1}{2} & \frac{1}{2} & \frac{1}{6} & \frac{1}{2} & \frac{1}{3} & \frac{3}{6} & \frac{1}{6} & \frac{1}{2} & \frac{1}{2} & \frac{2}{3} \\
1\frac{1}{6} & 1\frac{1}{3} & 1\frac{1}{2} & 1\frac{1}{6} & 1\frac{1}{6} & 1\frac{1}{8} & 1\frac{3}{8} & 1\frac{3}{3} & 1\frac{1}{4} & 1\frac{1}{2} \\
\frac{1}{3} & \frac{5}{6} & \frac{5}{6} & \frac{5}{6} & \frac{5}{6} & \frac{2}{3} & \frac{1}{4} & \frac{3}{4} & \frac{5}{6} & \frac{1}{2} & \frac{7}{8} \\
\end{array}
\]

140.

Subtract. Write the differences:

\[
\begin{array}{cccccccc}
9 & 8\frac{1}{8} & 4 & 7 & 6\frac{7}{8} & 9 & 6\frac{5}{8} & 8\frac{3}{8} \\
5\frac{1}{2} & 3\frac{1}{4} & 1\frac{3}{4} & 2\frac{1}{4} & 2\frac{3}{8} & 3\frac{1}{8} & 4\frac{3}{8} & 5\frac{1}{8} \\
9\frac{1}{4} & 6\frac{1}{2} & 8\frac{1}{2} & 6\frac{7}{8} & 9\frac{1}{2} & 7\frac{1}{2} & 3\frac{1}{2} & 8\frac{3}{4} \\
7\frac{1}{8} & 2\frac{3}{4} & 7 & 3\frac{1}{8} & 6\frac{7}{8} & 4\frac{3}{8} & 1\frac{1}{2} & 6 \\
8\frac{1}{4} & 7 & 9\frac{1}{2} & 6\frac{7}{8} & 8\frac{3}{4} & 7\frac{1}{8} & 8 & 6\frac{3}{8} \\
5 & 5\frac{3}{8} & 5\frac{1}{4} & 4 & 2\frac{1}{4} & 4\frac{1}{8} & 3\frac{5}{8} & 5\frac{1}{4} \\
8\frac{5}{8} & 5\frac{1}{4} & 9\frac{1}{4} & 7\frac{1}{8} & 6\frac{3}{4} & 4\frac{1}{4} & 9\frac{1}{4} & 9\frac{3}{4} \\
4\frac{1}{8} & 2\frac{1}{4} & 6\frac{5}{8} & 3 & 5\frac{3}{4} & 2\frac{3}{8} & 7\frac{3}{4} & 5\frac{5}{8} \\
33. & 34. & 35. & 36. & 37. & 38. \\
96\frac{1}{8} & 118\frac{1}{2} & 75\frac{5}{8} & 129\frac{1}{8} & 107\frac{3}{4} & 159\frac{7}{8} \\
68\frac{3}{4} & 86\frac{5}{8} & 53\frac{3}{4} & 93\frac{3}{8} & 49\frac{5}{8} & 74\frac{3}{4}
\end{array}
\]
1. Helen's exact average for December was 87½. Kate's was 84½. How much higher was Helen's than Kate's?

87½ How do you think of ½ and ½?
84½ How do you think of 1¾?
——— How do you change the 4?

2. Find the exact average for each girl. Write the answers clearly so that you can see them easily. You will use them in solving problems 3, 4, 5, 6, 7, and 8.

149. Review

Say the sums. Say them again. See if you can say them all in 5 minutes and have them all right.

A.

\[
\frac{1}{2}, \frac{1}{2}, \frac{1}{8}, \frac{7}{8}, \frac{3}{8}, \frac{3}{8}, \frac{3}{4}, \frac{5}{8}, \frac{1}{2}, \frac{1}{2}, \frac{1}{2}, \frac{1}{2}, \frac{1}{8}, \frac{1}{4}, \frac{1}{8}, \frac{1}{4}
\]

B.

\[
\frac{1}{8}, \frac{1}{4}, \frac{1}{2}, \frac{3}{4}, \frac{5}{8}, \frac{3}{8}, \frac{1}{2}, \frac{1}{8}, \frac{1}{4}, \frac{3}{4}, \frac{3}{8}, \frac{1}{2}, \frac{1}{4}, \frac{1}{8}, \frac{1}{4}, \frac{1}{4}, \frac{1}{4}, \frac{1}{4}
\]

C.

\[
\frac{1}{2}, \frac{3}{4}, \frac{1}{4}, \frac{3}{8}, \frac{1}{8}, \frac{7}{8}, \frac{5}{8}, \frac{1}{2}, \frac{3}{8}, \frac{1}{8}, \frac{5}{8}, \frac{1}{2}, \frac{3}{4}, \frac{3}{4}, \frac{3}{4}, \frac{3}{4}, \frac{3}{4}, \frac{3}{4}, \frac{3}{4}, \frac{3}{4}
\]

D.

\[
\frac{1}{4}, \frac{7}{8}, \frac{1}{4}, \frac{1}{8}, \frac{3}{8}, \frac{3}{4}, \frac{1}{8}, \frac{1}{4}, \frac{3}{4}, \frac{1}{2}, \frac{5}{8}, \frac{3}{4}, \frac{3}{4}, \frac{1}{8}, \frac{7}{8}, \frac{3}{8}, \frac{3}{8}, \frac{1}{8}, \frac{7}{8}, \frac{1}{8}, \frac{7}{8}
\]

151. Review

1. What must you add to each of these fractions to make 1?
   ½  ⅓  ⅛  ¼  ⅕  ⅙  ⅕  ⅗  ⅘  ⅚  ⅗  ⅘

2. What must you add to the smaller fraction to make the larger fraction?
   ½  ⅞  ⅛  ⅞  ⅞  ⅐  ⅞  ⅞  ⅞  ⅞  ⅞  ⅞
1. The round-trip fare for one child to Shady Lake is $1.05. How much will it cost for eighteen children?

2. Alice has saved $4.45. How much more does she need to buy a dress at $2.75 and a hat at $2.25?

3. A train that usually arrives at half past ten was 17 minutes late. When did it arrive?

4. A train of 16 cars, all filled with apples, brought 2304 barrels of apples. What was the average number of barrels in one car?

5. How many miles per hour does a steamboat go that makes a trip of 306 miles in 17 hours?

6. How far will an automobile go in 3 1/2 hours at the rate of 18 miles an hour?

7. Mr. Gordon spends $25.80 a year for newspapers and magazines. What is the cost per month?

8. There are 144 pencils in one gross. How many pencils are there in 4 1/2 gross?

9. How many are there in three fourths of a gross?

10. How many square feet are there in a garden that is 72 ft. by 34 ft.?

11. How many gallons of ice cream are needed to give two dishes of ice cream to each of 112 children, if one gallon makes 32 dishes of ice cream?

12. 1 square mile equals 640 acres. How many acres are there in a town 6 miles long and 6 miles wide?

13. George and Will buy a collection of 500 stamps for 25 cents. George pays 10 cents. Will pays 15 cents. How many stamps should George have? How many should Will have?
14. How much more do three quarts of thick cream at 80¢ a quart cost than five quarts of thin cream at 40¢ a quart?

15. The fourth-grade children bought a picture for the school. It cost $5.25. There were 35 children. How much should each child pay if they divide the cost equally?

16. How many boxes of berries are there in 15 crates if each crate contains 24 boxes?

17. Grace has three stamp books filled with stamps. One book has 24 pages with 16 stamps on a page. The second book has 32 pages with 30 stamps on a page. The third book has 48 pages with 42 stamps on a page. How many stamps are there in all three books?

18. Find the cost of a turkey that weighs 17½ lb. at 32¢ per pound.

19. How many hours will it take an automobile to go 175 miles if it goes 25 miles per hour?

20. Will earned $68.64 last year. How much did he average per week? (1 year equals 52 weeks.)

21. He hopes to earn an average of $1.50 per week next year. How much would that make for the whole year?

22. Mr. Russell sold 31½ lb. butter the first week in June and 33¼ lb. butter the second week. How much did he sell in all?

23. A baby weighed 7½ lb. when it was born and 26¼ lb. when it was one year old. How much had it gained in the year?
24. A tub of butter weighs 43\(\frac{1}{4}\) lb. The empty tub weighs 3\(\frac{3}{4}\) lb. How much does the butter weigh?

25. How much is the butter worth at 28¢ per pound?

26. A wagon loaded with coal weighs 4952 lb. The empty wagon weighs 838 lb. How much does the coal weigh?

27. How many half-pint glasses will 3 gallons of lemonade make?

28. If a gallon of paint is enough for 160 sq. ft., how many gallons will be required to paint both sides of a fence 4 ft. high and 260 ft. long?

29. How many square feet of wall paper are there in a roll 18 yards long and 2 ft. wide?

30. A ten-dollar bill equals how many 5-cent pieces?

31. Mr. Russell sold 255 lb. of butter in 17 weeks. How many pounds did he sell per week?

32. How much cloth is needed to make a suit if the coat takes 4\(\frac{1}{4}\) yd., the vest 1\(\frac{1}{8}\) yd., and the trousers 2\(\frac{1}{8}\) yd.?

33. The fare to Richmond is $1.25 for an adult and $.63 for a child under 12. How much will it cost for three adults and two children?

34. Helen promised to read 150 pages of a book about gardening. She has read 45 pages. How long will it take her to read the rest if she reads 15 pages an hour?

35. George ran a quarter of a mile in exactly 1\(\frac{3}{4}\) minutes. Did it take him more than 100 seconds?
COMMON MEASURES

Length

1 inch or 1 in.

12 inches = 1 foot (ft.)
3 feet = 1 yard (yd.)
16½ feet = 1 rod (rd.)
5280 feet = 1 mile (mi.)
320 rods = 1 mile (mi.)

Time

60 seconds = 1 minute (min.)
60 minutes = 1 hour (hr.)
24 hours = 1 day (da.)
7 days = 1 week (wk.)
365 days = 1 year (yr.)
Leap years have 366 days

Liquid Measure

4 gills = 1 pint (pt.)
2 pints = 1 quart (qt.)
4 quarts = 1 gallon (gal.)

Dry Measure

2 pints = 1 quart (qt.)
8 quarts = 1 peck (pk.)
4 pecks = 1 bushel (bu.)

Money

10 cents = 1 dime
10 dimes = 1 dollar

Weight

16 ounces = 1 pound (lb.)
2000 pounds = 1 ton (T.)

Area

144 sq. in. = 1 square foot (sq. ft.)
9 sq. ft = 1 square yard (sq. yd.)
272¼ sq. ft. = 1 square rod (sq. rd.)
160 square rods = 1 acre (A.)
640 acres = 1 square mile (sq. mi.)

1 sq. ft. = a square 1 ft. long and 1 ft. wide
1 sq. rd. = a square a rod long and a rod wide

One square inch
or
1 sq. in.
INDEX

No attempt is made to index the details of computations or problems. The page references are, as a rule, only to the first two or three appearances of the topic in question. The numbers refer to pages.

### ANSWERS: PART I

Answers to problems to be solved mentally and to written computations whose correctness should be obvious to inspection, are, as a rule, not given here.

The heavy-face numbers refer to the sections.
